QUESTION 1

Which EAP type requires the use of device certificates?

- A. EAP-TLS
- B. EAP-FAST
- C. EAP-SSL
- D. PEAP
- E. LEAP

Correct Answer: A

With either EAP-TLS or PEAP with EAP-TLS, the server accepts the client's authentication when the certificate meets the following requirements:

The client certificate is issued by an enterprise certification authority (CA), or it maps to a user account or to a computer account in the Active Directory directory service.

The user or the computer certificate on the client chains to a trusted root CA.

The user or the computer certificate on the client includes the Client Authentication purpose.

The user or the computer certificate does not fail any one of the checks that are performed by the CryptoAPI certificate store, and the certificate passes requirements in the remote access policy.

The user or the computer certificate does not fail any one of the certificate object identifier checks that are specified in the Internet Authentication Service (IAS) remote access policy.

The 802.1x client does not use registry-based certificates that are either smart-card certificates or certificates that are protected with a password.

The Subject Alternative Name (SubjectAltName) extension in the certificate contains the user principal name (UPN) of the user.

When clients use EAP-TLS or PEAP with EAP-TLS authentication, a list of all the installed certificates is displayed in the Certificates snap-in, with the following exceptions:

Wireless clients do not display registry-based certificates and smart card logon certificates.

Wireless clients and virtual private network (VPN) clients do not display certificates that are protected with a password.

Certificates that do not contain the Client Authentication purpose in EKU extensions are not displayed.

QUESTION 2

802.1X AP supplicant credentials have been enabled and configured on a Cisco WLC v7.0 in both the respective Wireless>AP>Global Configuration location and AP>Credentials tab locations. What describes the 802.1X AP

authentication process when connected via Ethernet to a switch?

- A. Only WLC AP global credentials are used.
- B. Only AP credentials are used.
- C. WLC global AP credentials are used first; upon failure, the AP credentials are used.
- D. AP credentials are used first; upon failure, the WLC global credentials are used.

Correct Answer: B

QUESTION 3

Management

- Summary
- ▼ **SNMP**
 - General
 - SNMP V3 Users
 - Communities
 - Trap Receivers
 - Trap Controls
 - Trap Logs
- HTTP-HTTPS**
- Telnet-SSH**
- Serial Port**
- Local Management Users**
- User Sessions**
- ▼ **Logs**
 - Config
 - Message logs

Syslog Configuration

Syslog Server IP Address

Syslog Server

Syslog Level

Syslog Facility

Msg Log Configuration

Buffered Log Level

Console Log Level

File Info ☒

Trace Info ☒

Refer to the exhibit. Which level message does the WLC send to the syslog server?

- A. syslog level errors and less severity messages
- B. syslog level errors messages
- C. all syslog levels messages
- D. syslog level errors and greater severity messages

Correct Answer: D

QUESTION 4

Which EAP types are supported by MAC 10.7 for authentication to a Cisco Unified Wireless Network?

- A. LEAP and EAP-Fast only
- B. EAP-TLS and PEAP only
- C. LEAP, EAP-TLS, and PEAP only
- D. LEAP, EAP-FAST, EAP-TLS, and PEAP

Correct Answer: D

QUESTION 5

You are configuring the social login for a guest-network.

Which three options are configurable social connectors in Cisco CMX Visitor Connect? (Choose three.)

- A. MySpace
- B. Facebook
- C. Pinterest
- D. Medium
- E. Google+
- F. LinkedIn

Correct Answer: BEF
