- ⚙️ **800,000+** Satisfied Customers

QUESTION 1

Refer to the exhibit.

An engineer must block FTP traffic coming in from a particular Service VPN on a WAN Edge device. Which set of steps achieves this goal?

- A. Create a localized policy and add it to the interface feature template.
- B. Create a localized policy, add it to VPN template, and add an ACL to the interface feature template.
- C. Create a prefix list, add it to the localized policy, and add it to the interface feature template.
- D. Create a localized policy, add it to the device template, and add an ACL to the interface feature template.

Correct Answer: D

QUESTION 2

What is the OMP graceful restart default value on vSmart controllers and WAN Edge routers?

- A. 21,600 seconds
- B. 43,200 seconds
- C. 86,400 seconds
- D. 604,800 seconds

Correct Answer: B

OMP graceful restart is enabled by default on Cisco vSmart Controllers and Cisco SD-WAN devices. OMP graceful restart has a timer that tells the OMP peer how long to retain the cached advertised routes. When this timer expires, the

cached routes are considered to be no longer valid, and the OMP peer flushes them from its route table.

The default timer is 43,200 seconds (12 hours), and the timer range is 1 through 604,800 seconds (7 days). To modify the default timer value:

QUESTION 3

An engineer wants to track tunnel characteristics within a SLA-based policy for convergence.

Which policy configuration will achieve this goal?

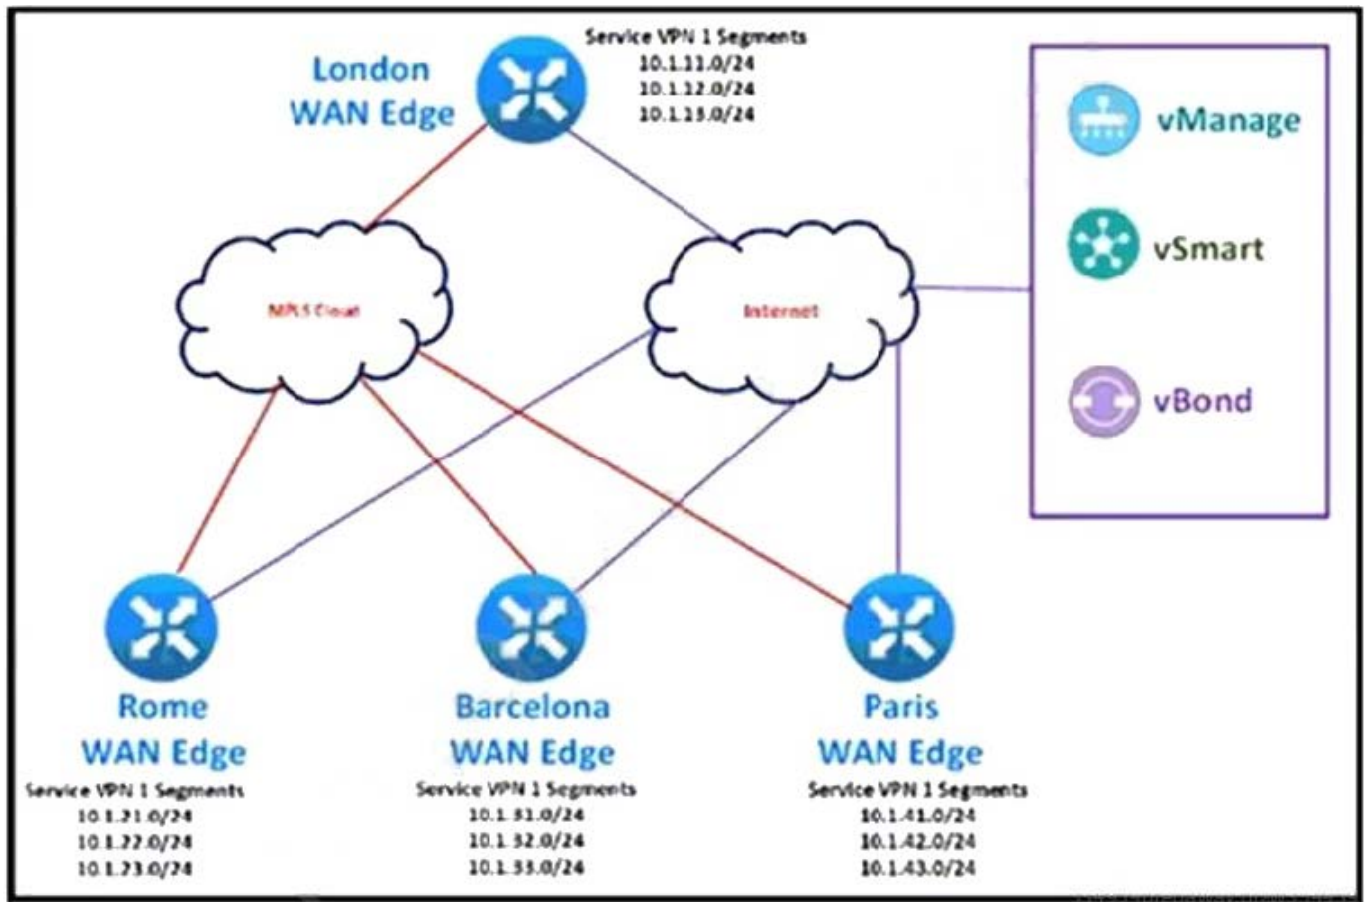

- A. Data policy
- B. Control policy
- C. App-route policy
- D. VPN membership policy

Correct Answer: C

App-Route policies allow you to define and manage application-aware routing policies based on specific application characteristics, such as application performance, latency, and other tunnel-related characteristics. These policies are used to ensure that traffic is routed over the most suitable paths to meet SLA (Service Level Agreement) requirements, including convergence and performance criteria.

QUESTION 4

Refer to the exhibit.

The SD-WAN network is configured with a default full-mesh topology. An engineer wants Barcelona and Paris to communicate to each other through the London site using a control policy. Which control policy configuration accomplishes the task?

CONFIGURATION **POLICIES** **Custom Options**

Centralized Policy Localized Policy

Centralized Policy Localized Policy

CLI Policy CLI Policy

D

- A. Option A
- B. Option B
- C. Option C
- D. Option D

Correct Answer: A

QUESTION 5

What is a benefit of the application aware firewall feature in the Cisco SD-WAN solution?

- A. application monitoring
- B. application malware protection
- C. application visibility
- D. control policy enforcement

Correct Answer: C
