QUESTION 2

The network operator asks you to change the config setting on one specific host. All 300 hosts are managed with Puppet. Which action results in the requested change?

A. This is an unsupported feature of Puppet, and Chef or Ansible must be used to make this change.

B. Go to that host and make the config change. Puppet sees the local override and skips that part.

C. Add an if statement to the Puppet manifest, and add specific config settings, in case Puppet is running on that host.

D. Add a node-based variable lookup override in Hiera, so that if Puppet runs on that host, it takes the variable from Hiera.

Correct Answer: D

Reference: https://docs.puppet.com/puppet/4.9/hiera_use_function.html#merge-behaviors

QUESTION 3
Refer to the exhibit. Which action effectively secures the controller?

A. Enable HTTP to HTTPS redirect.

B. Require complex passwords.

C. Use NUT on the router before the controller.

D. Blacklist the public WAN.

E. Whitelist the Admins network and block all others.

Correct Answer: A

QUESTION 4

Which statement about agentless configuration management system is true?

A. It requires managed hosts to have an interpreter for a high-level language such as Python or Ruby.

B. It uses existing protocols to interface with the managed host.

C. It uses compiled languages as the basis on the domain-specific language to interface with managed hosts.

D. It requires managed hosts to connect to a centralized host to receive updated configurations.

E. It requires a software package to be installed on the managed host.

Correct Answer: B

Adding the managed hosts to Management Server using an agentless configuration

QUESTION 5

Which statement about Cisco ASA REST API calls is true?

A. GET and POSR methods are supported, whereas PUT is not supported.

B. Calls block other security management protocols, such as Cisco ADSM.

C. Changes to the configuration are automatically written to the startup configuration.

D. The Cisco ASA REST agent must first be enabled on the CLI.

Correct Answer: A

GET - Retrieves data from the specified object.

PUT - Adds the supplied information to the specified object; returns a 404 Resource Not Found error if the object does not exist.

POST - Creates the object with the supplied information.
