### QUESTION 1

A remote user who uses Avaya Softphone to work from home reports that the client (Desktop) application will not register. After verifying that the user has configured the softphone application to "point" to the correct IP address of a communication manager gatekeeper using administered extension, you ask if the user supplied a password when logging on. The user confirms that the password was used on each log-on attempt.

You look up the user's information and note that the type field is 4620 (IP telephone) and the Security Code field is \*##.

With reference to the scenario described in the exhibit, which form will help you diagnose the situation?

- A. feature access
- B. station
- C. coverage path
- D. remote access security
- E. class of service

Correct Answer: B

---

### QUESTION 2

The monitor and display capacity commands can be used to get a real-time status of the system using Avaya Site Administration (ASA). Which command and tool should you use to view a summary of the overall condition of the system?

- A. Monitor system command using terminal emulationmode
- B. Monitor system command using GEDI
- C. Monitor status command using terminal emulationmode
- D. Display status using GEPI or terminal emulationmode

Correct Answer: A

---

### QUESTION 3

Communication Manager and system Platform each have their own backup function and each back up different data. For system Platform based systems, both backups need to be done routinely.

What is a difference between the backup function for System Platform and Communication Manager?

- A. Only the Communication Manager backup can encrypt the file.
- B. Only the Communication Manager backup can be scheduled.

C. Only the System Platform backup can use secure copy Protocols (SCP).

D. Only the System Platform backup can use secure file transfer protocol (SFTP).

Correct Answer: A
