QUESTION 1

From which Session Manager Profile field would an administrator define the local server for failover from the core?

A. Primary Session Manager

B. Secondary Session Manager

C. Origination Application Sequence

D. Termination Application Sequence

E. Survivability Server

Correct Answer: B

QUESTION 2

A technician in is tasked with moving a user from one redundant Session Manager pair to another Which sequence describes the steps that should be taken?

A. Go to the User\'s User Profile. Select different Session Manager instance from the Primary Session Manager and Secondary Session Manager lists.

B. Go to the user\'s User Profile. De-select the current community. Select the new community.

C. Navigate to the Communities page. Select the Community into which the user will be moved. Select the user from a drop down list to add the user to the community.

D. Go to the Locations page. Select a location, define it as a Primary community and add the user. Select another location, define it as a Secondary community and add the user.

Correct Answer: A

QUESTION 3

R has started importing a file containing many user records. What will SMGR do if it encounters a record it cannot import?

A. It will abort the operation and roll back any successfully imported records from the import file.

B. Whether SMGR will abort and rollback the operation or continue processing records is entirely configurable.

C. Whether SMGR will abort or continue processing records is entirely configurable; but you cannot rollback successfully imported users.

D. It will continue processing the rest of the import file and collate the failures into a single XML document that can be retrieved following the import.

Correct Answer: B

QUESTION 4

An originating Application Sequence has been configured to route calls from a given user to a feature server. It appears however, that the feature is not being applied when a call is made.

What would be the best course of action an administrator should take to identify the issue?

A. Run traceSM and make the call. Check the SIP INVITE is routed to the feature server. Check the content of the Route header.

B. Make a test call. Open Session Manager calltrace.log. Look for error messages that identify routing issues.

C. Run the \\'Call Routing Test\\' utility from within System Manager. Filter on caller address and route header.

D. Run a network packet capture tool, filtering for SIP messages. Make the call and check that the anticipated SIP messages are exchanged between SIP telephones.

Correct Answer: A

QUESTION 5

What is validated when the Transport Layer Security (TLS) handshake and mutual TLS authentication is performed between the SIP entity and Session Manager?

A. entity link

B. entity name

C. domain

D. certificate

Correct Answer: D
