### QUESTION 1

How is request routed to a "Named" Application?

- A. Session Manager uses the phase tag of a route header of the incoming request and matches it to a dial pattern then uses the associated Routing Policy.
- B. Session Manager uses the route header of the incoming request and matches it to a dial pattern then uses the associated Routing Policy.
- C. Session Manager uses the Request URI of the incoming request and matches it to a dial pattern then uses the associated Routing Policy.
- D. Session Manager uses the termination application sequence associated to the Communication Profile of the user to route the request.

Correct Answer: C

### QUESTION 2

Which URL should be used to access the web console to install a System Manager template?

- A. <https://135.0.0.5/webconsole>
- B. <https://135.0.0.6/webconsole>
- C. <https://135.0.0.7/SMGR>
- D. <https://135.0.0.7/webconsole>

Correct Answer: C

### QUESTION 3

A company has multi-location voice network. They are introducing Session Manager to make their routing centralized. They have Avaya Communication Manager at their main location. For the SIP telephone on Session Manager to call the

H.323 telephones on communication Manager, which adaption module may be used in their configuration?

- A. ChangeDomain
- B. DigitConversionAdapter
- C. NumberAdaptation
- D. DomainChangeAdapter
- E. DefaultAdapter

Correct Answer: B

### QUESTION 4

```
13:49:55.639 : SIP/2.0 503 Service Unavailable - System Busy
Incoming Message.

TCP (reliable=true): ip=135.122.76.28, port=5060, plugin=null,
forceUDP=false

SIP/2.0 503 Service Unavailable - System Busy
To: sip:5555@avaya.com;tag=SIPFW2b866f1b-0efab4c1
From: sip:4001@etsslabs.avaya.com;tag=1294762368

Content-Length: 0
```

Session Manager (SM) has been successfully installed. You have configured the Session Manager instance and it has passed all tests. However, when you attempt to test a call, it fails and you receive a 503 service Unavailable - System Busy response.

What is a cause for the call to fail and how can it be fixed?

- A. There is a non-bidirectional FQDN resolution between SM and System Manager (SMGR). Verify that either the SMGR or the SM has updated DNS records or the hostnames are added to the /etc/host file on the SM and the SMGR.
- B. The Security Module service is not running. Verify the status of the Security Module and reset it.
- C. The Session Manager is not accepting new requests. Verify the System Administration Management State is set to Accept New Service.
- D. The SIP user attempting to make the call has not registered properly with the Session manager. Verify the communication profile of the user has Session Manager Profile defined.
- E. The Session manager is not accepting new requests. Verify the system Administrative Service state is set to Accept New Service.

Correct Answer: C

---

#### QUESTION 5

An IMS type feature server has been installed by another administrator team. They have also configured session manager to route all incoming calls for a user to be routed to the new feature server. It appears from running traces and capturing network traffic that Session does indeed route the User\'s incoming calls to the feature server, but that the feature server does not appear to take any action besides returning the request back to Session Manager.

Which field may be incorrectly configured?

- A. Application Handle
- B. Entity Link port
- C. Originating Application Sequence
- D. Terminating Application Sequence

Correct Answer: A
