QUESTION 1

Users between four customer sites are reporting frequent problems placing and receiving calls. In trying to identify the issue, you check the Bandwidth Usage between Session Manager Locations and get an error message, "Unable to access status information for SM1 ?cannot connect to server, internal error".

Which item is most likely the cause of this error?

- A. There is limited bandwidth between the locations.
- B. The Session Manager Service State was set to deny new service.
- C. The System Manager cannot communicate with the Session Manager because of a network issue.
- D. The Session Manager is processing high volume of calls and is causing inter-SM server connectivity problems.

Correct Answer: D

QUESTION 2

```
System Manager:          135.122.76.116

Local Instance Name:     NearEndSM
Local Management Host:   135.122.76.27
Local Asset Host:        135.122.76.28
Local Asset State:        Deny New SIP
Local Management State:  Enabled

Other Session Managers:
TrainBSM Management Host: 135.122.76.139
TrainBSM Asset Host:       135.122.76.140
```

Review the output of the command shown in the exhibit. Which command is used to generate these results and what does it tell you?

- A. swversion displays the Session Manager Release information.
- B. statapp displays the current status of the Session Manager services.
- C. initDRS displays the Session Manager Node registration and data replication.
- D. traceSM displays a ladder trace of the SIP requests going in and out of the Session Manager.
- E. smconfig displays the network information and status the Session Manager.

Correct Answer: E

QUESTION 3

What are two reasons for creating a network location? (Choose two.)

- A. Locations are used to implement Call Admission Control.
- B. The location of a caller is used to determine which Session Manager will process the request.
- C. Locations are used to limit the number of users that may register to the session manager specific physical location.
- D. Session Manager uses the termination location of a caller to determine which dial patterns to look at when routing the call.
- E. Session Manager uses the origination location of a caller to determine which dial patterns to look at when routing the call.

Correct Answer: AE

QUESTION 4

System Manager provides a Dashboard summary for monitoring and validating the health of each Session Manager instance.

What information is not available from the Session Manager Dashboard?

- A. Service State
- B. Security Module status
- C. Entity Monitoring
- D. Managed Bandwidth status

Correct Answer: D

QUESTION 5

Digit Conversion in Adaptation can be specified to modify "origination" type headers. Which three are origination / source type URIs? (Choose three.)

- A. Request-URI
- B. P-Asserted-Identity
- C. Refer-To (in REFER messages)
- D. History-info (calling portion)

E. Contact (in 3xx response)

Correct Answer: BDE
