QUESTION 1

An organization is adding four Session Managers installed to its network. The installation scripts for all four session Manager Instances have completed and all services have been started but none have yet been configured with Session Manager. The technician\\\'s task is to use System Manager to set up the four Session Managers in an in (n-1)/n redundant arrangement ready for adding users to redundant Session Manager Pairs. Which sequence best describes the tasks that are to be performed?

A. Ensure that a Location and SIP Domain suitable for each Session Manager is defined. Add each Session Manager as a SIP Entity. Associate each Session Manager SIP Entity with a Session Manager instance. Set up Entity Links between each Session Manager.

B. Define each Session Manager as a SIP Entity. Establish relationships between them by defining Routing Policies based on their respective locations. Add appropriate Adaptations to each Session Manager.

C. Define each Session Manager as a SIP Entity by creating Entity Links. Create Communication Profiles for each Session Manager.

D. Add each Session Manager as Routing Agents. Establish links between them by adding Locations. Mark each Session Manager as being \\\'active\\\' or \\\'standby\\\'.

Correct Answer: A

QUESTION 2

An IMS type feature server has been installed by another administrator team. They have also configured session manager to route all incoming calls for a user to be routed to the new feature server. It appears from running traces and capturing network traffic that Session does indeed route the User\\\'s incoming calls to the feature server, but that the feature server does not appear to take any action besides returning the request back to Session Manager. Which field may be incorrectly configured?

A. Application Handle

B. Entity Link port

C. Originating Application Sequence

D. Terminating Application Sequence

Correct Answer: A

QUESTION 3

What is the outcome of running SMnetsetup on a server that has an existing installation of session manager 601?

A. The network and date/time is configured on the server.

B. A System Manager System administrator login will be created.

C. The same version of the Session Manager software currently Installed is re-installed?

D. The current version of the Session Manager software is upgraded.

Correct Answer: A

QUESTION 4

Which two statements describe the purpose of a System Manager (SMGR) role? (Choose two.)

A. It provides access to any number of resources managed by SMGR.

B. It impacts the originating and terminating applications that can be sequenced for a user.

C. It is automatically held by users that have been added to any group containing that role.

D. It can be held by multiple administrators at the same time and a single administrator can have multiple roles enabling tight control of access.

Correct Answer: AD

QUESTION 5

A technician has been asked to apply an Application Sequence to call made from / to a non-SIP user who does not have Session Manager Profile. Which sequence describes the steps that should be taken?

A. Add an Avaya-SIP Communication Address to the user\\'s User Profile. Add a Session Manager Profile to the user\\'s User Profile. Select appropriate Originating and Terminating Sequences for the user from the options in the new Session Manager Profile.

B. Create a new Implicit User rule. Define a number pattern that can be compared with dialed numbers. Select appropriate Originating and Terminating Sequences to be applied when a match occurs.

C. Navigate to the list of Application Sequences and select the sequence to apply to the non-SIP user. Add the user\\'s extension number to the list of associated users. Select appropriate check box options to determine if the sequence should be applied In originating

mode, terminating mode or both.

D. Create a new Non-SIP User Application Sequence Policy. Define the address and location of the non-SIP user. Select appropriate Originating and Terminating Sequences for the non-sip user from the given options.

Correct Answer: B
