QUESTION 2

Which of the following is a protocol specifically designed for transporting event messages?

- A. SYSLOG
- B. SMS
- C. SNMP
- D. ICMP

Correct Answer: A

syslog is a standard for message logging. It permits separation of the software that generates messages, the system that stores them, and the software that reports and analyzes them. Each message is labeled with a facility code, indicating the software type generating the message, and assigned a severity label.

QUESTION 3

When purchasing a biometric system, one of the considerations that should be reviewed is the processing speed. Which of the following best describes what it is meant by processing?

- A. The amount of time it takes to convert biometric data into a template on a smart card.
- B. The amount of time and resources that are necessary to maintain a biometric system.

C. The amount of time it takes to be either accepted or rejected form when an individual provides Identification and authentication information.

D. How long it takes to setup individual user accounts.

Correct Answer: C

QUESTION 4

If you want only to scan fewer ports than the default scan using Nmap tool, which option would you use?

A. -sP

B. -P

C. -r

D. -F

Correct Answer: B

QUESTION 5

A company's policy requires employees to perform file transfers using protocols which encrypt traffic. You suspect some employees are still performing file transfers using unencrypted protocols because the employees do not like changes. You have positioned a network sniffer to capture traffic from the laptops used by employees in the data ingest department. Using Wire shark to examine the captured traffic, which command can be used as a display filter to find unencrypted file transfers?

A. tcp.port != 21

B. tcp.port = 23

C. tcp.port ==21

D. tcp.port ==21 || tcp.port ==22

Correct Answer: C
