### QUESTION 1

What are two accurate statements regarding the safety requirements for installing the Avaya Aura Messaging server into the rack? (Choose two.)

- A. Verify that the rack is level and stable before extending the server from the rack.
- B. Verify that the total AC supply branch circuit that supplies power to the rack does not exceed the branch circuit rating.
- C. Make sure to leave open space above and below your installed server to ensure proper air circulation.
- D. When installing a high capacity server which contains multiple power supplies you must install the cable management arm.

Correct Answer: AB

---

### QUESTION 2

You have administered a network connection to a remote messaging server. You leave the Avaya Aura Messaging system ports at their default settings and administer the remote. LDAP port on the network machine as 55000. When you test the network connection, updates between the Avaya Aura Messaging system and the networked machine fail. What is the likely reason for the failure?

- A. The Aura Messaging Firewall Service is not configured to allow traffic on port 55000.
- B. The networked machine's IP address has not been added to the external hosts file.
- C. Maximum Simultaneous LDAP Directory Update Sessions is still administered as zero.
- D. The default port for network update traffic is 56389, not 55000.

Correct Answer: A

---

### QUESTION 3
