### QUESTION 1

You are performing an installation which includes three application servers and one storage server. You complete the administration of one application server to include integration with the telephony server. You then backup the application server. To save time; you restore this backup to the remaining two application servers. After completing the installation, you notice that only the first application server receiving calls. The System Status (Application/AxC) page shows the AxC status as online for each application server and the Voice Messaging Application on each is running. Why is only the first server receiving calls?

- A. You did not cluster the application servers.
- B. The license files on the non-answering servers are incorrect.
- C. You still need to add trusted servers (on the storage server) for the remaining two application servers.
- D. You must complete the telephony integration for the remaining two application servers because this data is not included in the backup.

Correct Answer: D

---

### QUESTION 2

How versatile is Avaya Aura Messaging Release 6.1 regarding where voice messages are stored?

- A. A user can have voice messages stored in multiple storage destinations (Avaya Message Store, Exchange, or Zimbra) at the same time.
- B. An administrator can select a storage destination for the system (either Avaya Message Store, Exchange, or Zimbra) and all users will then have to use that storage destination.
- C. Users can only have voice messages stored in the Avaya Message Store.
- D. A user can have voice messages stored in either the Avaya Message Store or in one of the external storage destinations (Exchange or Zimbra) configured by the administrator.

Correct Answer: D

---
