### QUESTION 1

As a member of the IT infrastructure team, you have been assigned the job of network planning for the Implementation of Avaya Aura Messaging in your environment. You need to ensure that your network Domain Name Server (DNS) record includes appropriate messaging information. What are two important Avaya recommendations to consider during the process? (Choose two.)

- A. Create a SIG record for the Messaging Server in the DNS record.
- B. Create an "A" record for the Messaging Server in the DNS record.
- C. Create a CNAME record for the Messaging Server in the DNS record.
- D. Create an LOC record for the Messaging server in the DNS record.
- E. Create an MX record for the Messaging server in the DNS record.

Correct Answer: AC

---

### QUESTION 2

What are two accurate statements regarding the safety requirements for installing the Avaya Aura Messaging server into the rack? (Choose two.)

- A. Verify that the rack is level and stable before extending the server from the rack.
- B. Verify that the total AC supply branch circuit that supplies power to the rack does not exceed the branch circuit rating.
- C. Make sure to leave open space above and below your installed server to ensure proper air circulation.
- D. When installing a high capacity server which contains multiple power supplies you must install the cable management arm.

Correct Answer: AB

---

### QUESTION 3

As part of the installation, the customer will create a DNS record called "avayamsg". Where should the DNS record be directed in a multi-server system?

- A. the application server closest to the majority of the users
- B. the storage server
- C. any of the application servers, it does not matter which one
- D. the Exchange server with the Avaya Voice Message form for Microsoft Outlook

Correct Answer: B

---

#### QUESTION 4

What time does an Aura Messaging system perform its automatic backup routine?

- A. at 1:05 AM every weekday
- B. as scheduled by installer
- C. at 3:05 AM everyday
- D. at noon Monday, Wednesday, Friday

Correct Answer: B

---

#### QUESTION 5

You are performing an installation which includes three application servers and one storage server. You complete the administration of one application server to include integration with the telephony server. You then backup the application server. To save time; you restore this backup to the remaining two application servers. After completing the Installation, you notice that only the first application server receiving calls. The System Status (Application/AxC) page shows the AxC status as online for each application server and the Voice Messaging Application on each is running. Why is only the first server receiving calls?

- A. You did not cluster the application servers.
- B. The license files on the non-answering servers are incorrect.
- C. You still need to add trusted servers (on the storage server) for the remaining two application servers.
- D. You must complete the telephony integration for the remaining two application servers because this data is not included in the backup.

Correct Answer: D
