QUESTION 4

Which statement describes the graceful restart capability in Cisco NX-OS Software?

- A. In NX-OS Software, the OSPFv2 graceful restart extension is Cisco proprietary and is only compatible with other Cisco routers.
- B. A graceful restart allows OSPFv2 to remain in the data forwarding path through a process restart. When OSPFv2 needs to restart, it first sends a type 8 LSA, which includes a grace period that tells NSF helpers to keep all LSAs that originated from the restarting interface.
- C. Graceful restart helps keep an NX-OS system forwarding traffic transparently even if it experiences a cold reboot.
- D. If the restarting OSPFv2 interface does not come back up before the end of the grace period, or if the network experiences a topology change, the OSPFv2 neighbors tear down adjacency with the restarting OSPFv2 interface and treat it as a normal OSPFv2 restart.
- E. OSPFv3 graceful restart must be disabled before doing an ISSU.

Correct Answer: D

QUESTION 5

Which two actions must be done before configuring iSCSI boot for a server? (Choose two.)

- A. The storage array must be licensed for iSCSI boot.
- B. The operating system must be iBFT-compatible.
- C. Zoning must be configured.
- D. Boot parameters must be configured in the global group policy.

E. IP subnet of iSCSI initiator has to be in the same subnet as that of storage array.
