QUESTION 1

The customer has two sites that must operate independently of each other in the event of a WAN failure. During normal operations, administrators from each site must be able to manage the other site through the vSphere Web Client.

Which vCenter Server Appliance (VCSA) and Platform Services Controller (PSC) diagram shows the VMware-recommended design that satisfies these requirements?

B.

C.

D.

A. Exhibit A

B. Exhibit B

C. Exhibit C

D. Exhibit D

Correct Answer: D

<https://www.opvizor.com/understanding-the-impacts-of-mixed-version-vcserver-deployments/>

QUESTION 2

A company has asked a systems architect to ensure that a backup solution leverages VMware vSphere Storage APIs - Data Protections (VCAP). Which logical design concept applies to the situation?

- A. Requirement
- B. Assumption
- C. Constraint
- D. Risk

Correct Answer: A

QUESTION 3

A company has requested assistance with a new cross-site failover design between two sites which will support business-critical applications. Latency between the sites is less than 5ms round-trip. The company requires:

1.
application must be restarted quickly in the event of a total site failure
2.
allow for planned migration during maintenance
3.
applications must be kept online even when migrated due to planned maintenance

Drag each statement to its correct concept

Select and Place:

Statement	Concept
Applications must be restarted quickly.	Risk
Application downtime will result in significant financial loss.	Constraint
Latency between the two sites will remain at or below 5ms.	Assumption
Applications must be kept online during planned migration between sites.	Requirement

Correct Answer:

Statement	Concept
	Application downtime will result in significant financial loss
	Latency between the two sites will remain at or below 5ms.
	Applications must be kept online during planned migration between sites.
	Applications must be restarted quickly.

QUESTION 4

Which of the following needs to be considered when determining the amount and size of the hosts required for a virtual design?

- A. Aggregate CPU and memory requirements
- B. Future growth
- C. Number of vCPUs to be hosted per box
- D. All of the above

Correct Answer: D

QUESTION 5

Match the design characteristic to the appropriate concept.

Select and Place:

Database servers must be restarted prior application servers in case of host failure.	Manageability
All vMotion traffic must be encrypted	Security
The web server must support a minimum 10,000 user connections per week.	Recoverability
Transaction applications are mission-critical	Availability
vCenter Server must be accessible from sites in scope.	Performance

Correct Answer:

	vCenter Server must be accessible from sites in scope.
	All vMotion traffic must be encrypted
	Database servers must be restarted prior application servers in case of host failure.
	The web server must support a minimum 10,000 user connections per week.
	Transaction applications are mission-critical
