QUESTION 1

A company has deployed vRealize Automation into its production environment and now wants to integrate it with different components of its infrastructure through the REST API. What are three services provided by the REST API? (Choose three.)

- A. Blueprint Service
- B. Forms Service
- C. Monitoring Service
- D. Portal Service
- E. Approval Service

Correct Answer: CDE

QUESTION 2

A new vSphere cluster has been added to a production environment. The architect has been tasked with managing this cluster from vRealize Automation. Which two methods could be used to begin consuming this new cluster for all future deployments? (Choose two.)

- A. Create a new reservation using the new compute resource and set the priority to a lower number than the existing production reservation.
- B. Create a new reservation using an existing compute resource and set the priority to a higher number than the existing production reservation.
- C. Modify the existing production reservation by changing the compute resource used to the new vSphere cluster.
- D. Create a new reservation using the new compute resource and disable the existing production reservation.

Correct Answer: BC

QUESTION 3

A company has the full VMware software-defined data center (SDDC) stack deployed and is now considering Amazon Web Services (EC2). The vRealize Automation (vRA) architect needs to integrate an Amazon test account to perform testing.

What should the architect do to move forward with the initiative?

- A. Create an Openstack endpoint and connect it to Amazon's cloud.

- B. Create an Amazon EC2 endpoint.
- C. Deploy a vCenter server appliance in Amazon AWS and connect it as an endpoint to vRealize Automation.
- D. Use the vRealize Orchestrator Plug-in for Amazon Web Services (AWS).

Correct Answer: B

QUESTION 4

An architect is tasked with designing a backup strategy for vRealize Orchestrator as part of an upcoming production rollout of a Cloud Management Platform. Which are two valid backup design recommendations? (Choose two.)

- A. If vRealize Orchestration is embedded within the vRealize Automation appliance, perform its backup along with Manager Services for vRealize Automation.
- B. Perform backup of vRealize Orchestrator virtual machines in the order of the startup priority.
- C. If vRealize Orchestrator is a standalone component, perform its backup before backing up vRealize Automation components in no particular order.
- D. Perform file-level backup of the Orchestrator database only after a successful full virtual machine backup.

Correct Answer: CD

QUESTION 5

An IaaS Administrator has been tasked with organizing virtualization compute resources and cloud endpoints into fabric groups by type and intent. One or more fabric administrators will manage the resources in each fabric group. Which are three considerations to take into account when designing the fabric groups? (Choose three.)

- A. Fabric administrators are responsible for creating reservations on the compute resources in their fabric groups to allocate fabric to specific business groups.
- B. Fabric administrators monitor the resource use for their group(s) and often are approvers for catalog requests.
- C. Fabric administrators may submit requests on behalf of other users. These users could be a member of more than one group and have different roles in different groups.
- D. The IaaS administrator must grant the role of fabric administrator to the appropriate users.
- E. Fabric groups will be created in a specific tenant, but their resources could be made available to users who belong to business groups in all tenants.

Correct Answer: ADE
