QUESTION 1

An architect is tasked with designing a backup strategy for vRealize Orchestrator as part of an upcoming production rollout of a Cloud Management Platform. Which are two valid backup design recommendations? (Choose two.)

- A. If vRealize Orchestration is embedded within the vRealize Automation appliance, perform its backup along with Manager Services for vRealize Automation.
- B. Perform backup of vRealize Orchestrator virtual machines in the order of the startup priority.
- C. If vRealize Orchestrator is a standalone component, perform its backup before backing up vRealize Automation components in no particular order.
- D. Perform file-level backup of the Orchestrator database only after a successful full virtual machine backup.

Correct Answer: CD

QUESTION 2

IT Services would like to automate the allocation of software applications. The company uses a modern virtual desktop platform with software management capabilities, and the platform supports interoperability via a REST API. The following requirements have been established for this project:

1.

Business users will use a self-service portal to request software added to their existing system.

2.

The requestor may select one or more software applications from a list during the request.

3.

The software application list must be up-to-date.

4.

The virtual desktop team will provide REST API calls needed to interface with the existing platform.

Which three of these listed elements are required for this scenario? (Choose three.)

- A. Customization of XaaS form
- B. vRealize Orchestrator workflow with script action
- C. Resource mapping
- D. Resource action
- E. External value definition

Correct Answer: BCD

QUESTION 3

The Human Resources (HR) team would like its members to be able to manage and delete Active Directory user accounts in vRealize Automation while protecting against accidental user account deletion. In which two ways could this be accomplished? (Choose two.)

- A. Create an Approval Policy for '\\Service Catalog - Catalog Item Request\\' requiring that HR managers authorize the deletion action.
- B. Create an Approval Policy for '\\Service Catalog - Resource Action Request\\' requiring that HR managers authorize the deletion action.
- C. Create an Event Broker subscription to notify HR managers and prevent the deletion from occurring.
- D. Create an Event Broker subscription to notify HR managers and move the account into an archive OU.

Correct Answer: AB

QUESTION 4

The security team has mandated that all new virtual machines undergo an automated network security scan when provisioned. The security team has provided the cloud architect with the REST API calls necessary to interface with the security scanning solution.

Which design recommendation would enable this capability?

- A. Create an Orchestrator workflow to trigger the security scan based on a subscription to the BuildComplete lifecycle state.
- B. Design an approval policy that references the external REST API and associate this approval policy with the IaaS machine provisioning workflow.
- C. Design a software component that includes the REST API calls during the Install script, and include
- D. This component on all systems.
- E. Create an Orchestrator workflow to trigger the security scan based on a subscription to the MachineActivated lifecycle state.

Correct Answer: E

QUESTION 5

A bank has requested assistance with developing a backup design for its vRealize Automation platform. They would like system backups to be crash-consistent in the event of an outage. What are three guidelines that should be followed when planning these backups? (Choose three.)

- A. Minimize the number of active transactions before beginning a backup. Plan a regular backup for when the system is least active.

- B. For non-virtual workloads, back up installation directories as required.
- C. When backing up the complete system, back up all instances of the vRealize Automation appliance and databases as close to each other as possible, preferably within seconds.
- D. Create a backup of instances of the vRealize Automation appliance and the IaaS components when updating certificates.
- E. When backing up the complete system, back up all instances of the vRealize Automation appliance one at a time to preserve availability.

Correct Answer: ACD
