-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

## QUESTION 1

During requirements gathering for an organization's private cloud on a single machine catalog, the following requirements were identified:

A user should be able to select a data center location which is mapped to a custom resource by the fabric administrator.

A Guest VM custom hostname format should be based on the first two letters of the data center location.

A generated VM custom hostname format should be displayed as a drop-down in the catalog request page using a vRealize Automation (vRA) custom property backed by external vRealize Orchestrator (vRO) action.

Which design recommendation would best address these requirements?

- A. Define a custom property "\_vm.DataCenter.Location" with static datacenter values, assign it to the blueprint with the "Show in the request" check box selected and map it as an input to the required vRO action.
- B. Define a custom property "Vrm.DataCenter.Location" with static datacenter values, assign it to the blueprint with the "Show in the request" check box selected and map it as an input to the required vRO action.
- C. Enable "Display location on request" in the blueprint's VM machine type, map the built-in "Vrm.DataCenter.Location" custom property as an input to the required vRO action.
- D. No new custom property is required since the fabric administrator has already mapped datacenter locations to the correct compute resources. Map the built-in "\_vm.DataCenter.Location" custom property as an input to the required vRO action.

Correct Answer: C

## QUESTION 2

An architect has been asked to design an application blueprint that contains a Web server, Application server, and Database server. The servers' software will be installed during provisioning from vRealize Automation. When working with a full-stack application in a converged blueprint, what should the architect recommend regarding the dependency configuration and most appropriate build order?

- A. Configure a software dependency requiring the database software to complete before starting the web and application software.
- B. Configure a machine dependency requiring the application machine to complete before starting the remaining machine provisioning.
- C. Configure a software dependency requiring the application software to complete before starting the web and application software.
- D. Configure a machine dependency requiring the web machine to complete before starting the remaining machine provisioning.

Correct Answer: A

### QUESTION 3

A cloud architect has developed the following diagram showing the relationship between different parts of a vRealize Suite deployment, including vRealize Operations components. View the exhibit.

Referring to the exhibit, which two statements are true? (Choose two.)

- A. This diagram depicts the physical design of the solution.
- B. The Analytics Cluster has an incoming dependency on the Remote Collector Cluster.
- C. The Remote Collector Cluster has an incoming dependency on the Analytics Cluster.
- D. This diagram depicts the logical design of the solution.

Correct Answer: BC

### QUESTION 4

A development team has requested the ability to refresh database contents for existing pre-production SQL servers managed by vRealize Automation. The developers have provided the cloud architect with a T-SQL script suitable for performing this task. Which design recommendation would address the requirements of this scenario?

- A. Build a software component to run the T-SQL script.
- B. Design an XaaS blueprint based on a custom Orchestrator workflow.
- C. Design a blueprint and use custom properties to run the T-SQL script.
- D. Build a resource action and publish it to the developers.

Correct Answer: A

### QUESTION 5

A company is currently reviewing all of its security roles and permissions due to a compliance audit.

It needs to specify which roles are tenant-specific and which are system-wide.

Which two roles are system-wide? (Choose two.)

- A. Services architect
- B. Approval administrator
- C. IaaS administrator
- D. Fabric administrator
- E. Application architect
- F. System administrator

Correct Answer: CF
