QUESTION 1

You are in the process of upgrading your UCS M3 Server to a newer UCS M4 Server. You associate the Service Profile to the new UCS Server, but it fails to boot. You suspect of a failed boot hard drive. You check your RAID1 Boot LUN in UCS Manager, but see no error messages.

What could be causing the issue?

- A. The newer Cisco UCS M4 Server is using flash drives, not hard drives
- B. The newer Cisco UCS M4 Server is using disks of larger capacity than the previous UCS M3 Server
- C. A misconfiguration on the Service Profile Local Boot Policy
- D. A misconfiguration on the Service Profile Local Disk Policy

Correct Answer: A

QUESTION 2

Which statement is true regarding the UCS Manager GUI is showing "Overall Status Unassociated" in the General tab for a C-series server?

- A. The server has a service profile assigned, but has connectivity issues with UCS Manager
- B. The server is not properly connected
- C. The server does not have a service profile assigned, but has been discovered by UCS Manager
- D. The server has been properly connected, but has not been discovered by UCS Manager

Correct Answer: B

QUESTION 3

The command `show interface veth 705` is telling you that the bound interface is Ethernet 3/1/2.

What is the location of the blade that has veth 705 associated to it?

- A. Chassis 3, Slot 1
- B. Chassis 3, Slot 2
- C. There is not enough information
- D. Chassis 1, Slot 2

Correct Answer: A

QUESTION 4

You are experiencing intermittent connectivity issues on one specific Cisco UCS server. Some applications work, while others do not transfer data. You suspect jumbo frame limitations.

Which two places do you check the jumbo frame settings? (Choose two.)

- A. Check server's service profile and/or service profile template
- B. Check server's QoS System Class
- C. Check the fibre channel port configuration for jumbo frame configuration
- D. Check upstream switch ports frame size configuration
- E. Check server's individual vNICs and/or vHBAs properties

Correct Answer: BD

QUESTION 5

Which are two Application Gateways primary roles? (Choose two.)

- A. Manage configuration changes during FSM transitions

- B. Communicate with virtual machines and report health and state
- C. Automate updates to the XML Database
- D. Communicate with end points and report their health and state
- E. Manage configuration changes made with UCS Manager

Correct Answer: AC
