QUESTION 1

Standard security practice for a company requires that all administrator-level user accounts have their passwords changed every 60 days. The cloudadmin@vmc.local account password is changed by an administrator through the VMware vSphere Client to adhere to the security policy. When the administrator attempts to log into the VMware Cloud on AWS vCenter Server through the VMware vSphere Client a few days later as cloudadmin@vmc.local using the account credentials copied from the VMware Cloud console, the administrator's access is denied. What is the likely cause of this issue?

- A. The cloudadmin@vmc.local account password should not be changed through the VMware vSphere Client. In order to prevent unauthorized access to VMware Cloud on AWS by non-authorized individuals, VMware will lock the account out.
- B. When the password for cloudadmin@vmc.local is updated from the VMware vSphere Client, the updated password is not reflected in the VMware Cloud console.
- C. The cloudadmin@vmc.local password change confirmation email has not been approved by an Organization Owner.
- D. The cloudadmin@vmc.local account password should only be changed through the appliance management interface of the VMware vCenter Server.

Correct Answer: B

QUESTION 2

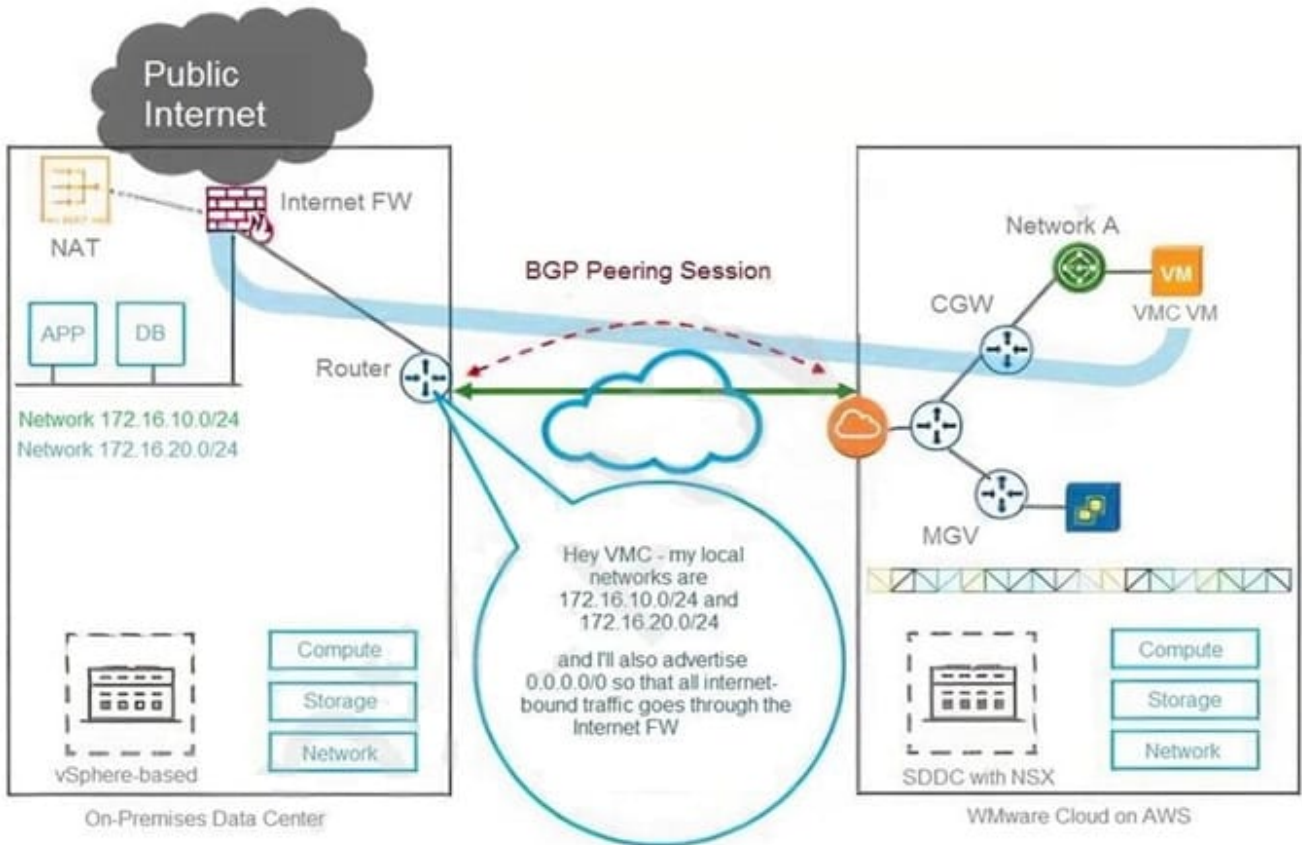

A customer is currently running 153 virtual machines in an eight-node vSphere cluster. Each host is equipped with 256GB RAM, two AMD CPUs and four 10Gb NICs. Which migration strategy should the administrator recommend?

- A. HCX Replication Assisted vMotion (RAV) with Enhanced vMotion Compatibility
- B. HCX Cold Migration
- C. Cross vCenter vMotion with Hybrid Linked Mode
- D. HCX vMotion with Enhanced vMotion Compatibility

Correct Answer: C

QUESTION 3

Refer to the exhibit.

An administrator completes an assessment of its local data center for potential migration into VMware Cloud on AWS. After reviewing and analyzing the data and taking into account the company's business and IT priorities and budget constraints, connectivity between its on-premises and VMware Cloud on AWS environment will NOT require any high speed low latency connections. All new networks should be added to the software-defined data center (SDDC) routing table automatically when created. Which connection supports these requirements?

- A. Layer 2 VPN (L2VPN)
- B. AWS Direct Connect
- C. Route-based VPN
- D. Policy-based VPN

Correct Answer: D

QUESTION 4

Which two accounts are mandatory prerequisites for the successful deployment of a VMware Cloud on AWS solution? (Choose two.)

- A. A VMware vCenter Server account
- B. An AWS account

- C. A VMware Cloud account
- D. An Amazon Elastic Compute Cloud (EC2) account
- E. A VMware Cloud on AWS account

Correct Answer: AE

QUESTION 5

Upon connecting a VMware Managed Transit Gateway (VTGW), the administrator discovers that there is an overlapping workload CIDR block. How will the software-defined data center (SDDC) handle the overlapping IP space?

- A. It will reject the remote IP space.
- B. It will isolate the overlapping segment in the cloud.
- C. It will allow the overlapping IP space.
- D. It will ensure both CIDR blocks work in both locations.

Correct Answer: C
