**QUESTION 1**

An architect has been asked to design a vSAN Stretched Cluster. The architect will configure Microsoft Active Directory to replicate between a server on Site A (preferred) and a server on Site B (non-preferred). The architect must minimize the amount of raw storage capacity used.

Which storage policy needs to be applied to the Active Directory server on site A?

- A. Dual site mirroring
- B. None

Correct Answer: D

---

**QUESTION 2**

An administrator has been tasked with the shutdown process of one of the nodes in a 4-node vSAN Cluster, in order to replace a motherboard. The administrator must select the correct maintenance mode option to ensure all objects remain compliant with the vSAN Default Storage Policy. No changes have been made to this policy.

Which maintenance mode option should the administrator select?

- A. Allow Reduced Redundancy
- B. Ensure Accessibility
- C. Full Data Migration
- D. No Data Migration

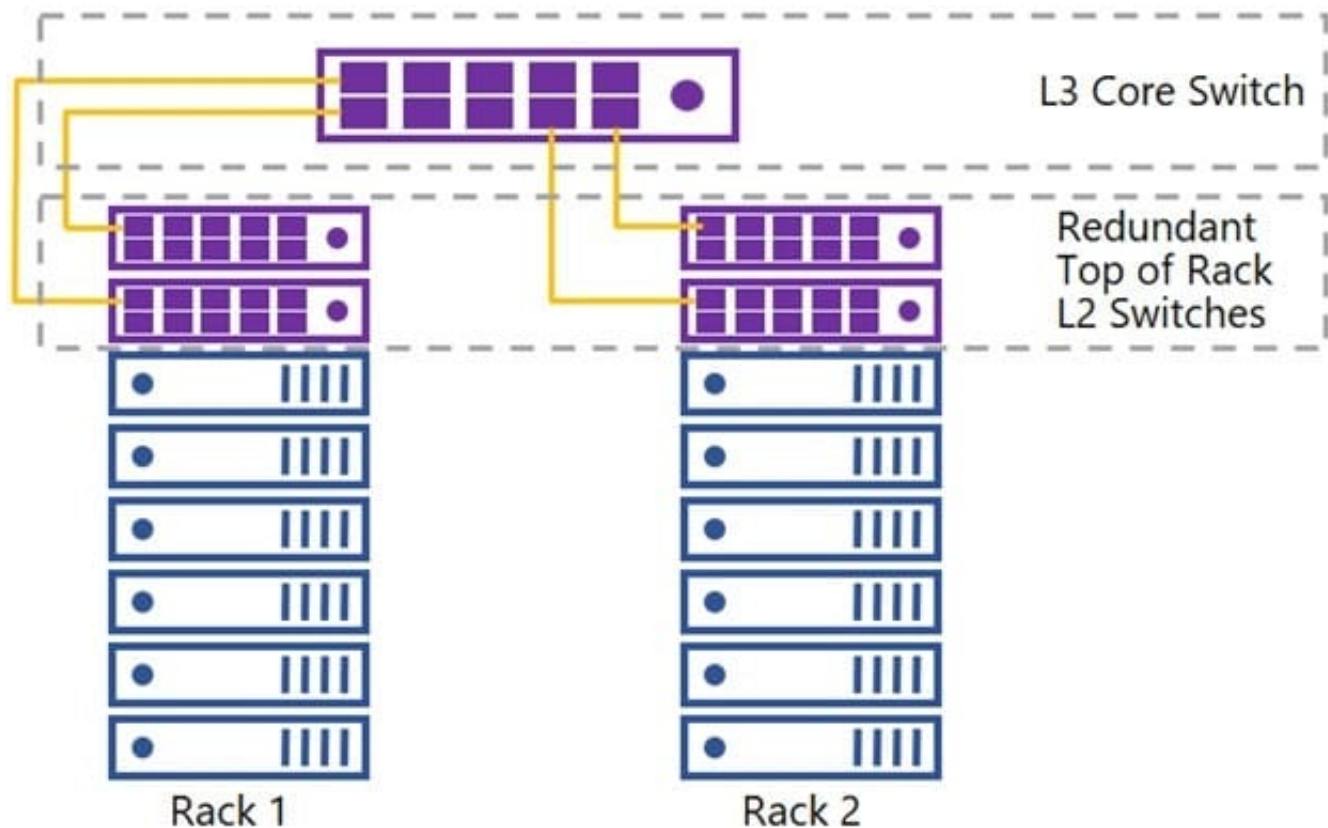

Correct Answer: D

---

**QUESTION 3**

Refer to the exhibit:

The vSAN Health service is reporting '\\vSAN Cluster Partition\\' warning. The partition list shows all hosts from rack 1 in a single partition and all hosts from rack 2 in another partition. Which hardware component requires investigation to resolve the cluster partition?

- A. NICs on each host in Rack 2
- B. vSAN Master node
- C. core switch
- D. ToR switches

Correct Answer: D

#### QUESTION 4

An administrator is patching a production Stretched Cluster using VMware Update Manager. Which statement is accurate?

- A. The witness hosts can be patched using normal patch processes with VMware Update Manager.
- B. Witness hosts cannot be patched or upgraded using VMware Update Manager.
- C. The witness host does not need to be upgraded as there is no data on the node, just metadata.
- D. The witness host must be deleted and a new witness host must be deployed.

Correct Answer: A

### QUESTION 5

A company is using vSAN Data At Rest Encryption. vCenter is placed on a separate management cluster with external storage. The external storage system has suffered from a disk error and the vCenter Server restore from backup has been

unsuccessful, due to media errors.

Considering the scenario, which statement is true?

- A. All encrypted disk groups become unmounted and remain offline until vCenter Server is back online.
- B. The data within the vSAN datastore is lost, if the hosts are powered off.
- C. The VMs on the vSAN datastore need to be migrated to another datastore as quickly as possible to prevent data loss.
- D. A new vCenter can be deployed using the existing KMS profile and associated with the existing vSAN encrypted clusters.

Correct Answer: C
