QUESTION 1

After a recent data loss event, the IT department plans to deploy a DR site using vSphere Replication with vSAN providing the storage backend.

The architect would like to know how many components will be created based on the following configuration:

2x 100 GB VMDK RAID 1 vSAN Storage Policy 4x Point in Time snapshots

How many components will be created?

- A. 32
- B. 24
- C. 16
- D. 8

Correct Answer: B

QUESTION 2

A business unit requires proprietary data to be protected against a site failure while using the least amount of storage and the least amount of nodes. AN administrator plans to implement a vSAN Stretched Cluster with a RAID-5 policy.

What is the minimum number of data nodes across all sites in this vSAN Stretched Cluster configuration?

- A. 4
- B. 8
- C. 12
- D. 6

Correct Answer: B

QUESTION 3

A 100GB virtual disk object has this storage policy assigned to it:

Site disaster tolerance: None - standard cluster Failures to Tolerate: 1 failure - RAID-1 (Mirroring) Number of disk stripes per object: 3

What is the maximum amount of raw vSAN storage capacity consumed by this virtual disk?

- A. 200GB
- B. 100GB

C. 300GB

D. 600GB

Correct Answer: B

QUESTION 4

The cluster level backend IOPS performance graph shows a higher-than-average number of IOPS for back-end storage.

What is a possible reason for this situation?

A. Data resynchronization is in progress.

B. DRS is invoking multiple vMotion migrations.

C. There is VM storage I/O traffic.

D. Not enough capacity for slack space is on vSAN datastore.

Correct Answer: A

QUESTION 5

An administrator must choose between deploying a virtual witness or physical witness for a vSAN Stretched Cluster. The administrator eventually decides to use a virtual witness.

What is a benefit of selecting this approach?

A. Reduced vSphere licensing

B. Additional compute capacity for running VMs

C. Shared metadata between separate clusters

D. Increased vSAN datastore capacity

Correct Answer: A
