QUESTION 1

In the destination patterns, which wildcard symbol indicates a single-digit placeholder?

A. ()

B. +

C. . (period)

D. %

Correct Answer: C

QUESTION 2

What is a Cisco Voice Gateway feature that enables class of service or calling privileges to be assigned?

A. COR

B. dial peer

C. partition

D. calling search space

Correct Answer: A

QUESTION 3

What are the PHBs that DiffServ use?

A. resource reservation and admission control

B. default, AF, and EF PHBs

C. AF, EF, and CS PHBs

D. AF and EF PHBs

E. default, AF, EF, and CS PHBs

Correct Answer: E

Explanation: A Per Hop Behavior refers to the packet scheduling, queuing, policing, or shaping behavior of a node on any given packet belonging to a Behavior Aggregate, and as configured by a Service Level Agreement (SLA) or policy. To date, four standard PHBs are available to construct a DiffServ-enabled network and achieve coarse-grained, end-to-end CoS and QoS: The Default PHB, Class-Selector PHBs, Expedited Forwarding PHB and Assured Forwarding PHB.

QUESTION 4

Which command is used to view the COR list?

A. show voip ccapi inout

B. show dial-peer cor

C. show dial-peer summary

D. show ip interface brief

Correct Answer: B

QUESTION 5

Drag the signaling methods from the left and drop them in the correct position in the graphic on the right.Some methods are used more than once, and some methods may not be used at all.
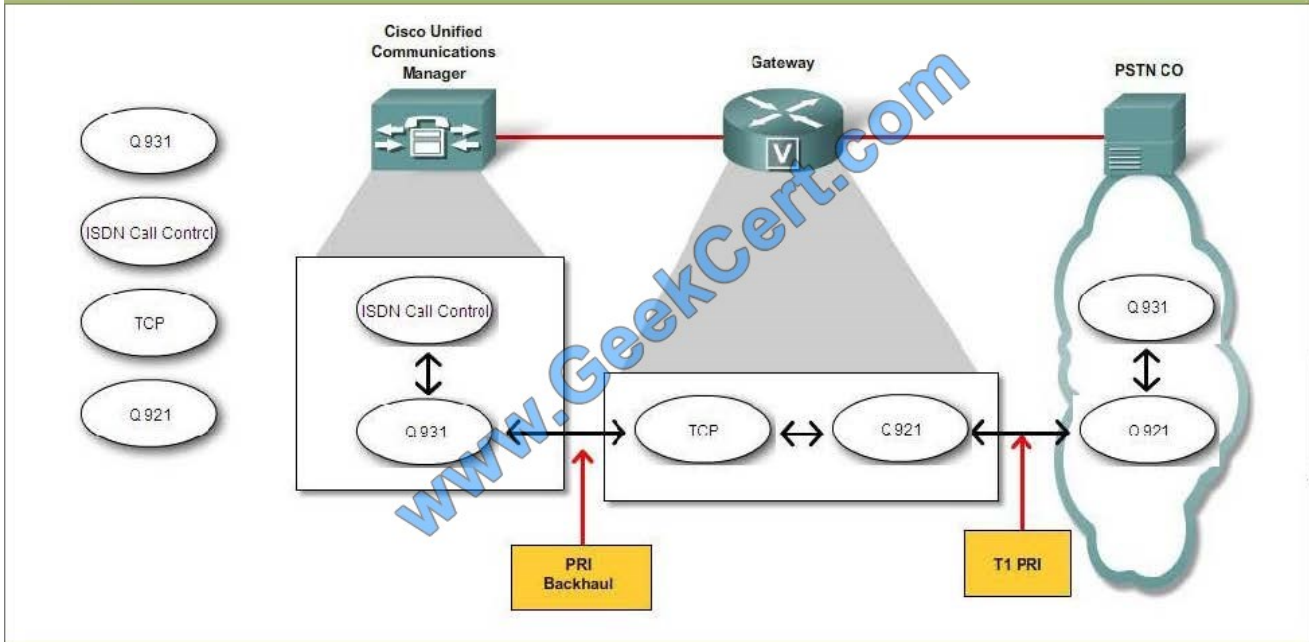

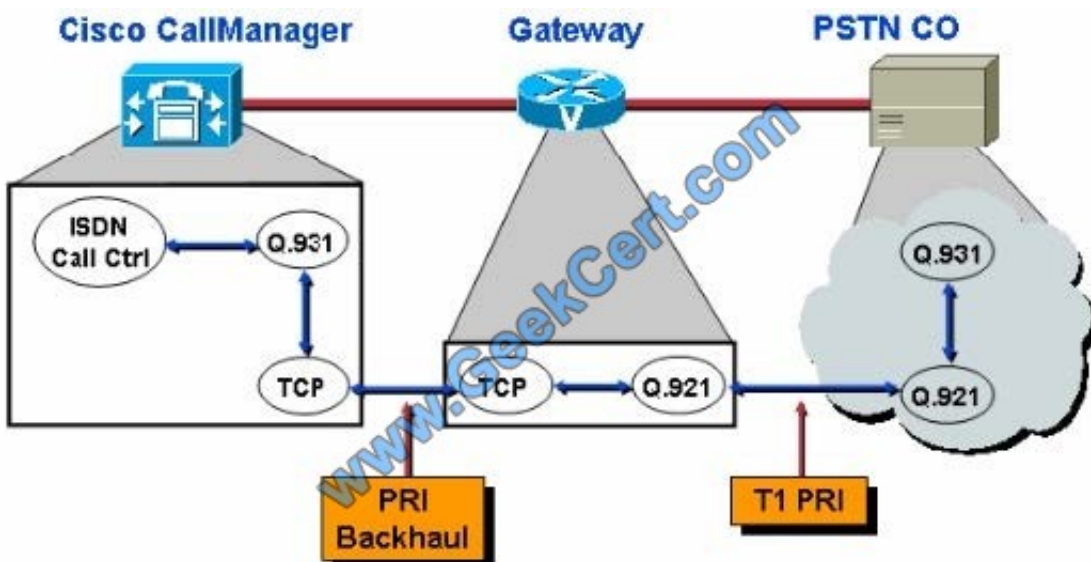

Select and Place:

Correct Answer:

Drag the signaling methods from the left and drop them in the correct position in the graphic on the right. Some methods are used more than once, and some methods may not be used at all.

Explanation/Reference:

The one thing that distinguishes a PRI from other interfaces is the fact that the data that is received from the PSTN on the D-channel and needs to be carried in its raw form back to the Cisco CallManager to be processed. The gateway does not process or change this signalling data, it simply passes it onto the Cisco CallManager through TCP port 2428. The gateway is still responsible for the termination of the Layer 2 data. That means that all the Q.921 data-link layer connection protocols are terminated on the gateway, but everything above that (Q.931 network layer data and beyond) is passed onto the Cisco CallManager. This also means that the gateway does not bring up the D-channel unless it can communicate with Cisco CallManager to backhaul the Q.931 messages contained in the D-channel.
