QUESTION 1

Refer to the exhibit.

```
access-list temp_acl webtype permit tcp host 10.0.4.4 eq 3389 log default
webvpn
  memcry-size percent 25
  enable outside
  svc enable
  tunnel-group-list enable
  rewrite order 10 disable resource-mask *://cisco.com/* name cisco-com-bypass
  smart-tunnel list Smart_tunnel_applications Microsoft-RDP-Client MSTSC.EXE platform
windows
group-policy temp_worker internal
group-policy temp_worker attributes
  banner value Welcome Temp Workers!
  vpn-tunnel-protocol svc webvpn
  webvpn
    url-list value temp_worker
    filter value temp_acl
    customization value temp_worker
  smart-tunnel auto-start Smart_tunnel_applications
  file-entry disable
  file-browsing disable
  url-entry disable
group-policy DfltGrpPolicy attributes
  vpn-tunnel-protocol IPSec svc webvpn
  webvpn
    url-list value Corporate_Server
tunnel-group temp_worker type remote-access
tunnel-group temp_worker general-attributes
  default-group-policy temp_worker
tunnel-group temp_worker webvpn-attributes
  customization temp_worker
group-alias temp_worker enable
group-url https://192.168.4.2/temp_worker enable
```

The ABC Corporation has a Cisco ASA in its test bed. A new network administrator is instructed to add a smart tunnel application to the existing configuration. The configuration will enable a "temp_worker" who is using Microsoft native RDP to have RDP access to server 10.0.4.4 only.

Which statement is correct concerning the smart-tunnel configuration?

- A. The WebType access list is misconfigured.
- B. The smart tunnel list parameter is misconfigured.
- C. The smart tunnel group policy parameters are misconfigured.

D. The smart tunnel configuration is configured correctly.

Correct Answer: D

QUESTION 2

What is the selection hierarchy to which attributes are applied to a clientless SSL VPN use? Drag an attribute policy on the left to the correct priority level within the attribute hierarchy on the right.

Select and Place:

What is the selection hierarchy to which attributes are applied to a clientless SSL VPN user? Drag an attribute policy on the left to the correct priority level within the attribute hierarchy on the right

Group Policy attributes attached to the user profile	highest priority
User Policy attributes	
DAP attributes	
Default Group Policy attributes	
Group Policy attributes attached to the connection profile	lowest priority

Correct Answer:

What is the selection hierarchy to which attributes are applied to a clientless SSL VPN user? Drag an attribute policy on the left to the correct priority level within the attribute hierarchy on the right

Empty boxes for dragging attribute policies.

- DAP attributes
- User Policy attributes
- Group Policy attributes attached to the user profile
- Group Policy attributes attached to the connection profile
- Default Group Policy attributes

QUESTION 3

What are three methods for VPN address assignment? (Choose three.)

- A. RADIUS authentication server
- B. Kerberos server
- C. internal address pool
- D. RSA SecureID authentication server
- E. LDAP server

Correct Answer: ACE

<http://www.cisco.com/en/US/docs/security/asa/asa82/configuration/guide/vpnadd.html>

Configuring an IP Address Assignment Method The ASA can use one or more of the following methods for assigning IP addresses to remote access clients. If you configure more than one address assignment method, the ASA searches each of the options until it finds an IP address. By default, all methods are enabled. To view the current configuration, enter the show runningconfig all vpn-addr-assign command. ?aa--Retrieves addresses from an external authentication server on a per-user basis. If you are using an authentication server that has IP addresses configured, we recommend using this method. ?hcp--Obtains IP addresses from a DHCP server. If you want to use DHCP, you must configure a DHCP server. You must also define the range of IP addresses that the DHCP server can use.?ocal--Use an internal address pool. Internally configured address pools are the easiest method of address pool assignment to configure. If you choose local, you must also use the ip-local-pool command to define the range of IP addresses to use. To specify a method for assigning IP addresses to remote access clients, enter the vpn-addr- assign command in global configuration mode. The syntax is vpn- addr-assign {aaa | dhcp | local}.

QUESTION 4

Which four statements about the Advanced Endpoint Assessment are correct? (Choose four.)

- A. It examines the remote computer for personal firewall applications.
- B. It examines the remote computer for antivirus applications.
- C. It examines the remote computer for antispyware applications.
- D. It examines the remote computer for malware applications.
- E. It does not perform any remediation, but it provides input that can be evaluated by DAP records.
- F. It performs active remediation by applying rules, activating modules, and providing updates where applicable.

Correct Answer: ABCF

Host Scan	<p>As a condition for the completion of a Cisco AnyConnect or clientless SSL VPN connection, the remote computer scans for a greatly expanded collection of antivirus and antispyware applications, firewalls, operating systems, and associated updates. It also scans for any registry entries, filenames, and process names that you specify. It sends the scan results to the security appliance. The security appliance uses both the user login credentials and the computer scan results to assign a Dynamic Access Policy (DAP).</p> <p>With an Advanced Endpoint Assessment License, you can enhance Host Scan by configuring an attempt to update noncompliant computers to meet version requirements.</p> <p>Cisco can provide timely updates to the list of applications and versions. Host Scan supports in a package that is separate from Cisco Secure I</p>

QUESTION 5

The administrator configured a Cisco ASA 5505 as a Cisco Easy VPN hardware client and also defined a list of Cisco Easy VPN backup servers in the Cisco ASA 5505. After an outage of the primary VPN server, you notice that your Cisco Easy VPN hardware client has now reconnected via a backup server that was not defined within the original Cisco Easy VPN backup servers list. Where did your Cisco Easy VPN hardware client get this backup server?

- A. The backup servers that you listed were no longer available, so the Cisco Easy VPN hardware client queried the load balance server for a "new" backup server address.
- B. The backup servers that you listed were no longer available, so a Group Policy that was configured on the primary VPN server pushed "new" backup server addresses to your client.
- C. The backup servers that you listed were no longer available, so the Cisco Easy VPN hardware client queried the primary VPN server via RADIUS protocol for a "new" backup server address.

D. The backup servers that you listed were no longer available, so the Cisco Easy VPN hardware client queried and received from a predefined LDAP server a "new" backup server address.

Correct Answer: B

<http://www.cisco.com/en/US/docs/security/asa/asa84/command/reference/b.html#wp1366328>

Usage Guidelines To remove the backup-servers attribute from the running configuration, use the no form of this command without arguments. This enables inheritance of a value for backup-servers from another group policy. IPsec backup servers let a VPN client connect to the central site when the primary ASA is unavailable. When you configure backup servers, the ASA pushes the server list to the client as the IPSec tunnel is established.

Configure backup servers either on the client or on the primary ASA. If you configure backup servers on the ASA, it pushes the backup server policy to the clients in the group, replacing the backup server list on the client if one is configured.
