QUESTION 1

HOTSPOT

You have a System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) deployment.

You need to build a task sequence to create a VHD that contains a deployment of Windows 8.1.

What should be the first and last action of the task sequence? To answer, select the appropriate options in the answer area.

Hot Area:

Answer Area

First task:

| Capture User State |
| Prepare ConfigMgr Client for Capture |
| Prepare Windows for Capture |
| Restart Computer |
| Set Task Sequence Variable |

Last task:

| Capture Operating System Image |
| Restore User State |
| Run Command Line |
| Setup Windows and ConfigMgr |

Correct Answer:

Answer Area

First task:

| Capture User State |
| Prepare ConfigMgr Client for Capture |
| Prepare Windows for Capture |
| Restart Computer |
| Set Task Sequence Variable |

Last task:

| Capture Operating System Image |
| Restore User State |
| Run Command Line |
| Setup Windows and ConfigMgr |

Box 1: Prepare configmgrfor capture This task sequence step takes the Configuration Manager 2007 client on the reference computer andprepares it for capture as part of the imaging process Box 2: Use the Capture Operating System Image task sequence step to capture one or more images from a reference computer and store them in a WIM file on the specified network share

QUESTION 2

DRAG DROP

You have a System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) deployment.

You need to implement anti-virus protection for all Configuration Manager clients. The solution must ensure that servers have different anti-virus settings than client computers.

In which order should you perform the required actions? To answer drag the appropriate actions to the correct locations. Each action may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll

to view content.

Select and Place:

Actions	Answer Area
Create a Configuration Manager Application.	First Action: Action
Create two deployments.	Second Action: Action
Deploy the Endpcint Protection point site system role.	Third Action: Create two custom antimalware policies
Deploy the System Health Validator point site system role.	Fourth Action: Action
Modify the Client Settings from the Administration workspace.	

Correct Answer:

Actions	Answer Area
Create a Configuration Manager Application.	First Action: Deploy the Endpcint Protection point site system role.
	Second Action: Modify the Client Settings from the Administration workspace.
	Third Action: Create two custom antimalware policies
Deploy the System Health Validator point site system role.	Fourth Action: Create two deployments.

Step 1: EndPoint Protection

When System Center 2012 Endpoint Protection isused with Microsoft System Center 2012 Configuration Manager, it provides a comprehensive enterprise management solution that lets you do the following:

*

 Centrally deploy and configure the EndpointProtection client.

*

 Configure default and custom antimalware policies that apply to groups of computers.

Etc

Step 2:

Client settings for devices include Endpoint Protection.

All client settings in System Center 2012 Configuration Manager are managed in the Configuration Manager console from the Client Settingsnode in the Administration workspace. A set of default settings is supplied with Configuration

Manager. When you modify the default client settings, these settings are applied to all clients in thehierarchy. You can also configure custom client settings,which override the default client settings when you assign these to collections.

QUESTION 3

DRAG DROP

You use Windows Server Update Services (WSUS) to deploy software updates. Automatic update settings are configured by using Group Policy objects (GPOs).

You deploy System Center 2012 R2 Configuration Manager Service Pack 1 (SP1).

You need to ensure that software update are managed by using Configuration Manager.

The solution must ensure that software updates are managed centrally always.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions	Answer Area
Unlink the GPO.	
Uninstall WSUS.	
Perform a sync of the software update point.	
Configure WSUS to use an upstream server.	
Add a Software update point site system role.	

Correct Answer:

Actions	Answer Area
Unlink the GPO.	Add a Software update point site system role.
Uninstall WSUS.	Configure WSUS to use an upstream server.
	Perform a sync of the software update point.

Configuring Software Updates in Configuration Manager Step 1: The software update point is required on the central administration site and on the primary sites in order to enable software updates compliance assessment and to deploy software updates to clients. The software update point is optional on secondary sites. The software update point site system role must be created on a server that has WSUS installed. Step 2: You can configure the upstream synchronization source for software updates synchronization on the Synchronization Source page of the wizard, or on the on the Sync Settings tab in Software Update Point Component Properties. Step 3: Synchronize software updates on a connected software update point

QUESTION 4

DRAG DROP

Your network contains a System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) environment.

Your company has a security policy that contains mandatory registry settings for all servers.

You have a collection named Servers that contains all of the servers.

You need to identify which servers do not comply with the security policy.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Correct Answer:

QUESTION 5

DRAG DROP

You have a System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) standalone primary site.

You use Configuration Manager to deploy software updates to client computers.

You plan to monitor the software update deployment process from a client computer.

You need to collect data as quickly as possible to monitor the software update deployment process.

Which actions should you initiate from the client computer? To answer, drag the appropriate actions to the correct locations. Each action may be used once, more than once, or not at all. You may need to drag the split bar between

panes or

scroll to view content.

Select and Place:

Actions

Discovery Data Collection Cycle
Machine Policy Retrieval and Evaluation Cycle
Software Inventory Cycle
Software Updates Deployment Evaluation Cycle
Software Updates Scan Cycle

Answer Area

First action: Action

Second action: Software Updates Scan Cycle

Third action: Action

Correct Answer:

Actions

Discovery Data Collection Cycle
Software Inventory Cycle
Software Updates Scan Cycle

Answer Area

First action: Machine Policy Retrieval and Evaluation Cycle

Second action: Software Updates Scan Cycle

Third action: Software Updates Deployment Evaluation Cycle
