QUESTION 1

You are preparing a virtual machine that will be used as a template.

You need to install SQL Server 2008 R2 on the virtual machine. The solution must meet the technical requirement for creating virtual machines. Which SQL Server 2008 R2 installation option should you select?

- A. Install based on configuration file
- B. Image completion of a prepared stand-alone instance of SQL Server
- C. Image preparation of a stand-alone instance of SQL Server
- D. Advanced cluster preparation

Correct Answer: C

QUESTION 2

Your network contains an Active Directory domain named contoso.com that connects to a Windows Azure environment. You deploy System Center 2012 R2 Data Protection Manager (DPM) to the domain.

You need to ensure that you can use DPM to back up to the Windows Azure environment.

Which three actions should you perform? Each correct answer presents part of the solution.

- A. From Windows Azure, create an endpoint.
- B. On the DPM server, allow inbound traffic on TCP port 135.
- C. Install the Windows Azure Backup agent.
- D. Install a certificate on the DPM server and the upload the certificate to Windows Azure.
- E. Create a backup vault.

Correct Answer: CDE

QUESTION 3

Your company has a private cloud that is managed by using a System Center 2012 Operations Manager infrastructure.

The private cloud has a connection to a partner company.

The connection uses a router named Router1.

Router1 is owned by the partner company.

The partner company's security policy states that only partner company network administrators can access the

configuration information of the partner company's network devices.

You need to monitor the availability of Router1.

The solution must meet the security policy requirement.

Which access mode should you configure to discover Router1?

- A. ICMP
- B. SNMPv3
- C. SNMPv1 and SNMPv2
- D. ICMP, SNMPv1, and SNMPv2
- E. ICMP and SNMPv3

Correct Answer: A

It says we must not access the configuration information of the partner company's network devices. So SNMP is not a choice, because it will give us just that. To monitor the availability, in other words the online/offline status of the device, we may use ICMP. Of course the device must answer to our ICMP requests like "ping", but that is not part of the question.

QUESTION 4

Your company has a private cloud that is managed by using a System Center 2012 infrastructure.

An administrator installs a new tape drive on a server that has Data Protection Manager (DPM) installed.

You discover that the tape drive is unavailable from the DPM Administrator console.

You verify that the tape drive is installed correctly on the DPM server.

You need to ensure that the tape drive is available from the DPM Administrator console.

What should you do from the DPM Administrator console?

- A. From the Agents view, click Install.
- B. From the Disks tab, click Add.
- C. From the Protection view, click Tape.
- D. From the Libraries view, click Rescan.

Correct Answer: D

To configure tape libraries In DPM Administrator Console, on the navigation bar click Management, and then click the Libraries tab. In the Actions pane, click Rescan. The Rescan operation might take several minutes to complete. DPM will add any library jobs to the queue that began during the Rescan operation. If a library job is already in progress when the Rescan operation begins, the Rescan operation will fail. Configuring Tape Libraries <http://technet.microsoft.com/en-us/library/ff399665.aspx>

QUESTION 5

You need to implement the planned integration of Configuration Manager and VMM.

You install Configuration Manager and create a collection that includes all of the Hyper-V hosts. Which four additional actions should you perform in sequence?

(To answer, move the appropriate four actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

Actions	Answer Area
Add a distribution point to Configuration Manager.	
Configure the update server to allow configuration changes.	
Add a software update point to Configuration Manager.	
Add an update server to VMM.	
Deploy a Windows Server Update Services (WSUS) server to the network.	

Correct Answer:

Actions	Answer Area
Add a distribution point to Configuration Manager.	Deploy a Windows Server Update Services (WSUS) server to the network.
	Add an update server to VMM.
	Configure the update server to allow configuration changes.
	Add a software update point to Configuration Manager.
