QUESTION 1

You are the administrator for a company's SharePoint Online environment. The environment hosts several site collections that are used to store and collaborate on (Documents that contain sensitive customer information.

A user in the customer relationship department must share a document that contains scheduling and project information with an external vendor. Only the external vendor and department user must access the document.

You need to ensure that the external vendor can access and collaborate on the document without exposing sensitive customer information.

Which two actions can you perform? Each correct answer presents a complete solution.

- A. Create a document library for the document and require sign-in.
- B. Share the site containing the collaboration document and require sign-in.
- C. Share the document and require sign-in.
- D. Share the document and do not require sign-in.

Correct Answer: AC

External users sign in to the service by using a Microsoft account or a work or school account. We can share the document through a new document library or share the document directly.

Incorrect answers:

Not B: We should not share the entire site. We should just share the document. Not D: External users must sign in to the service by using a Microsoft account or a work or school account.

QUESTION 2

You plan to deploy a SharePoint Server 2013 server farm to a test environment on a single server. The server has the following configurations:

A 64-bit processor that has four cores

Windows Server 2008 Enterprise

8 GB of physical memory

A 2-TB hard disk

You need to ensure that you can deploy the SharePoint Server 2013 farm to the server.

What should you do?

- A. Upgrade the operating system.

- B. Replace the processor.
- C. Add more physical memory.
- D. Add another hard disk drive.

Correct Answer: A

Need The 64-bit edition of Windows Server 2008 R2 Service Pack 1 (SP1) Standard, Enterprise, or Datacenter or the 64-bit edition of Windows Server 2012 Standard or Datacenter

QUESTION 3

You need to implement Office 365 authentication.

What should you do?

- A. Create a two-way trust between proseware.com and adatum.com.
- B. Deploy an AD FS proxy for the proseware.com domain.
- C. Create an AD DS domain named proseware.com and join the AD FS servers to the proseware.com domain.
- D. Add adatum.com and proseware.com as Office 365 SSO domains and use the SupportMultipleDomain parameter.

Correct Answer: D

QUESTION 4

You have a SharePoint server 2013 server farm.

Users report that the past week, some pages were slow to render.

You need to identify the 10 pages in the farm that take the longest to load.

Which link should you select? (To answer, select the appropriate link in the answer area.)

Hot Area:

Answer Area

Monitoring

Health Analyzer

Review problems and solutions

Review rule definitions

Timer Jobs

Review job definitions

Check job status

Reporting

View administrative reports

Configure diagnostic logging

Configure usage and health data collection

View health reports

Correct Answer:

Answer Area

Monitoring

Health Analyzer

Review problems and solutions

Review rule definitions

Timer Jobs

Review job definitions

Check job status

Reporting

View administrative reports

Configure diagnostic logging

Configure usage and health data collection

View health reports

QUESTION 5

You install and deploy a SharePoint 2013 farm, and then use the database-attach method to upgrade from a SharePoint 2010 farm to the SharePoint 2013 farm.

You need to upgrade a SharePoint 2010 site collection to a SharePoint 2013 site collection.

Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

	Answer Area
Run a site collection health check.	
Create an upgrade evaluation site.	
Perform a site collection upgrade.	
Change the self-service upgrade settings.	
Verify that the upgrade was successful and the site works as expected.	

Correct Answer:

	Answer Area
	Run a site collection health check.
Create an upgrade evaluation site.	Perform a site collection upgrade.
	Verify that the upgrade was successful and the site works as expected.
Change the self-service upgrade settings.	

Box 1: Run a site collection health check.

Box 2: Perform a site collection upgrade.

Box 3: Verify that the upgrade was successful and the site works as expected.

Note:

* To upgrade a site collection, site collection administrators complete the following steps:

1. Run the site collection health checks to verify the site is ready to upgrade.
2. Create an upgrade evaluation site to preview the differences between versions. (Optional)
3. Upgrade the site collection.
4. Verify that upgrade was successful and the site works as expected.

* After a server farm administrator has upgraded the databases, site collection administrators can upgrade individual site collections. When site collection

administrators first browse to their sites after the database has been upgraded, a notification bar at the top of the site indicates that their sites can be upgraded.

The choices are to Start now or Remind me later. Start now begins the site collection upgrade process.

Reference: Upgrade a site collection to SharePoint 2013
