-  **800,000+** Satisfied Customers

### QUESTION 1

You plan to deploy a SharePoint Server 2013 server farm.

You need to create four site collections. The site collections must meet the requirements described in the following table.

Site collection name	User must be able to create their own workflows by using Microsoft SharePoint Designer	The site collection administrator must be able to customize master pages by using Microsoft SharePoint Designer
SiteCol1	Yes	No
SiteCol2	Yes	Yes
SiteCol3	No	Yes
SiteCol4	Yes	Yes

What is the minimum number of web applications required to host the site collection?

- A. 1
- B. 2
- C. 3
- D. 4

Correct Answer: C

\*

You can manage how Microsoft SharePoint Designer is used at two levels:

/ Web application level which is applicable to all site collections in the web application and to the site collection administrators. / Site collection level (managed by site collection administrators) which is applicable to all sites in the collection

along with the Designers and Owners group.

\*

Enable SharePoint Designer

Enable or disable SharePoint Designer 2010 use for an entire application or site collection. If you want to ensure that all designers and owners within a specific site collection can use SharePoint Designer 2010, enable this setting at the site collection level.

### QUESTION 2

Contoso, Ltd. Recently merged with Fabrikam, Inc. Each company has an Active Directory Domain Services (AD RS) domain. You are managing the SharePoint environment in each domain.

You need to enable users in the Fabrikam.com domain to access the Contoso SharePoint farm but prevent users in the Contoso.com domain from accessing resources in the Fabrikam SharePoint farm event if they have been explicitly granted access to a site.

Select and Place:

### Elements

- Web Application Policy
- Two-way Forest Trust
- Security Groups
- One-way Forst Trust
- Result Source

### Answer Area

1. Configure a **Element** from the Contoso.com domain to the fabrikam.com domain
2. Add the Fabrikam.com **Element** to the Contoso SharePoint farm.
3. Configure a **Element** in the Fabrikam SharePoint farm.

Correct Answer:

### Elements

- 
- Two-way Forest Trust
- 
- 
- Result Source

### Answer Area

1. Configure a **One-way Forst Trust** from the Contoso.com domain to the fabrikam.com domain
2. Add the Fabrikam.com **Security Groups** to the Contoso SharePoint farm.
3. Configure a **Web Application Policy** in the Fabrikam SharePoint farm.

On-way forest trust Security groups web application policy

### QUESTION 3

You need to ensure that the web servers can communicate with service applications after you replace the existing farm. What should you do?

- A. Configure Windows Firewall to allow traffic on port 1433.
- B. Configure the network firewalls to allow traffic on port 32843.
- C. Configure Windows Firewall to allow traffic on port 32843.
- D. Configure the network firewalls to allow traffic on port 1433.

Correct Answer: B

---

### QUESTION 4

You are preparing to upgrade the Partner Projects site collection.

You need to perform the prerequisite task.

Which Windows PowerShell cmdlet should you run?

- A. Invoke-PolicyEvaluation
- B. Request-SPOUpgradeEvaluationSite
- C. Start-OrganizationUpgrade
- D. Upgrade SPOSite

Correct Answer: B

---

### QUESTION 5

A company uses SharePoint 2013 Server as its intranet portal. The Marketing department publishes many news articles, press releases, and corporate communications to the intranet home page.

You need to ensure that the Marketing department pages do not impact intranet performance.

Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)

- A. In Central Administration, set up a User Policy for the Super User and Super Reader accounts.
- B. Configure IIS to use the Super User and Super Reader accounts for caching.
- C. Use the Farm Configuration Wizard to configure the Super User and Super Reader accounts.
- D. Use Windows PowerShell to add the Super User and Super Reader accounts.

Correct Answer: AD

---

A: The way to correct this problem is to first create two normal user accounts in AD. These are not service accounts. You could call them domain\superuser and domain\superreader, but of course that's up to you.

The domain\superuser account needs to have a User Policy set for that gives it Full Control to the entire web application.

D: If you are using any type of claims based authentication you will need to use Windows PowerShell. And Windows PowerShell is the hipper more modern and sustainable option anyway.

If you are using classic mode authentication run the following cmdlets on one of your SharePoint servers:

```
$w = Get-SPWebApplication "http://"
```

```
$w.Properties["portalsuperuseraccount"] = "domain\superuser" $w.Properties["portalsuperreaderaccount"] =  
"domain\superreader" $w.Update() If you are using claims based authentication run these cmdlets on one of your  
SharePoint
```

servers:

```
$w = Get-SPWebApplication "http://"
```

```
$w.Properties["portalsuperuseraccount"] = "i:0#.w|domain\superuser" $w.Properties["portalsuperreaderaccount"] =  
"i:0#.w|domain\superreader" $w.Update()
```

Note:

\* If you have a SharePoint Publishing site and you check the event viewer every once in a while you might see the following warning in there:

Object Cache: The super user account utilized by the cache is not configured. This can increase the number of cache misses, which causes the page requests to consume unnecessary system resources.

To configure the account use the following command `stsadm -o setproperty -propertynameportalsuperuseraccount -propertyvalue account -urlwebappurl\`. The account should be any account that has Full Control access to the SharePoint

databases but is not an application pool account.

Additional Data:

Current default super user account: SHAREPOINT\system

This means that the cache accounts for your web application aren't properly set and that there will be a lot of cache misses. If a cache miss occurs the page the user requested will have to be build up from scratch again. Files and information

will be retrieved from the database and the file system and the page will be rendered. This means an extra hit on your SharePoint and database servers and a slower page load for your end user.

Reference: Resolving "The super user account utilized by the cache is not configured."
