QUESTION 1

A company has a SharePoint environment that contains one front-end web server and one database server.

The company would like to ensure that employees can send email messages to document libraries.

You need to configure the environment to receive email messages.

Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

Actions	Answer Area
In Central Administration, configure incoming email settings.	
Configure document libraries to store incoming email messages.	
Install and configure the SMTP service on the database server.	
Configure SharePoint sites to store incoming email messages.	
Install and configure the SMTP service on the SharePoint server.	
In Central Administration, configure outgoing email settings.	

Correct Answer:

Actions	Answer Area
	Install and configure the SMTP service on the SharePoint server.
	In Central Administration, configure incoming email settings.
Install and configure the SMTP service on the database server.	Configure document libraries to store incoming email messages.
Configure SharePoint sites to store incoming email messages.	
In Central Administration, configure outgoing email settings.	

Note:

To Enable a SharePoint 2013 document library to receive emails, follow the following steps:

1. Ensure the SMTP feature is activated on the SharePoint Server
2. Configure Incoming email settings

Configure Incoming email settings:

Launch SharePoint Central Administration, select System Settings, click Configure Incoming E-mail

3. Configure a SharePoint Document Library for incoming email Configure a Document Library for Incoming email:

Switch to your document library's settings and click incoming email settings Set the option Allow This Document Library to Receive Email to Yes

QUESTION 2

A company plans to implement SharePoint.

You have the following requirements:

You must implement a hybrid, two-way trust environment.

You must implement single sign on.

You must minimize costs.

You need to plan the implementation of the solution.

Which products should you implement? To answer, select the appropriate product from each list in the answer area.

Hot Area:

Technology	Product
Office 365 version	<ul style="list-style-type: none">SharePoint Online E1SharePoint Online E3
SharePoint on-premises	<ul style="list-style-type: none">SharePoint 2013 StandardSharePoint 2013 Enterprise
Authentication	<ul style="list-style-type: none">On-premises Active Directory Domain Services (AD DS)On-premises Active Directory Federation Services (AD FS)
Internet end-point	<ul style="list-style-type: none">Reverse ProxySSL Certificate

Correct Answer:

Technology	Product
Office 365 version	<ul style="list-style-type: none">SharePoint Online E1SharePoint Online E3
SharePoint on-premises	<ul style="list-style-type: none">SharePoint 2013 StandardSharePoint 2013 Enterprise
Authentication	<ul style="list-style-type: none">On-premises Active Directory Domain Services (AD DS)On-premises Active Directory Federation Services (AD FS)
Internet end-point	<ul style="list-style-type: none">Reverse ProxySSL Certificate

- * You can implement Single Sign-on with Office 365 E1 Plan for Exchange Online and SharePoint Online.
- * SharePoint 2013 Standard would be enough.
- * For single sign on we should use Active Directory Federation Services (AD FS).
- * ADFS signs the tokens that it issues with a token signing certificate. You must import into SharePoint a certificate that it can use to validate the token from ADFS.

Reference: Single sign-on roadmap <https://technet.microsoft.com/en-us/library/hh967643.aspx>

QUESTION 3

You plan to deploy a SharePoint Server 2013 server farm.

You have a network share named Share1 that contains the extracted installation files for SharePoint Server 2013.

You download a cumulative update for SharePoint Server 2013 named Cu1.exe. You need to create a slipstreamed installation source that contains the cumulative update.

What should you do?

- A. Run cul.exe and specify the /extract parameter.
- B. Copy Cul.exe to the Updates folder in Share1.
- C. Run setup.exe and specify the /extract parameter.
- D. Create a folder named 15\Resources in Share1, and then copy Cul.exe to the 15\Resources folder.

Correct Answer: A

Extract the contents of the downloaded update file to the Updates folder in the SharePoint installation source with the following command: {FileName}.exe /extract:C:\SPInstall\Updates

Note: SharePoint updates that have been released since the product launch provide fixes and enhancements to the product, and including these updates in a new installation is recommended. Rather than manually applying the updates after installing SharePoint, you can include them in a 'slipstream\\' mode so that they are automatically installed with SharePoint.

QUESTION 4

Services domain uses Windows 2003 native mode. The company acquires a new division and plans to synchronize the additional forest with Office 365.

You perform the initial configuration steps for the solution by using the DirSync tool.

You need to perform a multi-forest Active Directory sync.

Which three actions can you perform? Each correct answer presents a complete solution.

- A. Install DirSync on a server that runs Forefront Identity Manager 2010 R2. Use DirSync for the multi-forest synchronization.

-
- B. Install Azure Active Directory Synchronization Services on a separate server from the server that runs DirSync and Forefront Identity Manager server.
- C. Install and configure Forefront Identity Manager 2010 R2.
- D. Uninstall any instances of Azure Active Directory Synchronization Services or Forefront Identity Management 2010 R2, and then install and use DirSync for the multi-forest synchronization.
- E. Uninstall DirSync and then install Azure Active Directory Synchronization Services (AAD Sync). Use AAD Sync for the multi-forest synchronization.
- F. Install Azure Active Directory Synchronization Services on the same server that hosts DirSync. Use DirSync to configure multi-forest on-premises SharePoint environments

Correct Answer: BCF

QUESTION 5

You manage a SharePoint farm in an Active Directory Domain Services (AD DS) forest. You implement SharePoint Online.

AD DS users must be able to access on-premises sites and SharePoint Online resources without having to authenticate each time that they access SharePoint Online. You replace the default certificate for validating incoming tokens in the SharePoint farm.

You need to ensure that SharePoint uses the new certificate.

Which service must you restart?

- A. Certificate Service
- B. Component Services
- C. Secure Store service
- D. Internet Information Services (IIS)

Correct Answer: A
