-  **800,000+** Satisfied Customers

### QUESTION 1

Your company has a main office and three branch offices. The main office is located in Austin. The branch offices are located in Denver, San Diego, and Chicago.

The network contains an Active Directory forest. The forest contains a single domain. Each office is configured as an Active Directory site.

The site in Austin contains four domain controllers that run Windows Server 2008 R2 and are configured as global catalog servers. The sites in Denver, San Diego, and Chicago each contain a read-only domain controller (RODC) that runs

Windows Server 2008 R2. No other domain controllers exist on the network.

You plan to deploy an Exchange Server 2013 organization. Exchange Server 2013 servers will be deployed in the Austin, Denver, and San Diego sites. Users from the Chicago site will access their mailbox remotely.

You need to recommend changes to the Active Directory infrastructure to support the planned deployment of Exchange Server 2013.

What should you recommend?

- A. Replace the RODCs in the Denver and San Diego sites with domain controllers that are configured as global catalog servers.
- B. Configure the RODCs in the Denver and San Diego sites as read-only global catalog servers.
- C. Configure Active Directory automatic site coverage for the Chicago site.
- D. Upgrade all of the RODCs to Windows Server 2012.

Correct Answer: A

---

### QUESTION 2

You have an Exchange Server 2013 organization that contains two servers named EX1 and EX2.

EX1 and EX2 are the members of a database availability group (DAG) named DAG1. DAG1 contains a database named DB1. DB1 is active on EX1.

You deploy a new Exchange Server 2013 server named Ex3.

You add EX3 as a member of DAG1.

You need to add a copy of DB1 to EX3 by using an offline copy of the database.

Which three actions should you perform in sequence? (To answer, move the appropriate three actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

Actions	Answer Area
Run the <b>Move-ActiveMailboxDatabase</b> cmdlet.	
Run the <b>Add-MailboxDatabaseCopy</b> cmdlet.	
Manually copy the database files to EX3.	
Dismount DB1 on EX2.	
Run the <b>Update-MailboxDatabaseCopy</b> cmdlet.	

Correct Answer:

Actions	Answer Area
Run the <b>Move-ActiveMailboxDatabase</b> cmdlet.	Dismount DB1 on EX2.
	Manually copy the database files to EX3.
	Run the <b>Add-MailboxDatabaseCopy</b> cmdlet.
Run the <b>Update-MailboxDatabaseCopy</b> cmdlet.	

### QUESTION 3

You have an Exchange Server 2013 organization that contains five servers.

All users connect to their mailbox by using a mobile device.

All of the users in the finance department are in an organizational unit (OU) named OU1.

You need to prevent the finance users from accessing the extended storage on their mobile device.

What should you do?

- A. Create a new mobile device mailbox policy, and then run the Set-CasMailboxcmdlet.
- B. Create a new device access rule, and then run the Set-Mailbox cmdlet.
- C. Create a new mobile device mailbox policy, and then run the Set-Mailboxcmdlet.
- D. Create a new device access rule, and then run the Set-CasMailboxcmdlet.

Correct Answer: A

---

#### QUESTION 4

You need to identify which business requirement will be met by implementing the planned hardware load balancer.

Which business requirement should you identify?

- A. Minimize the hardware costs required for a load balancing solution.
- B. Minimize the software costs required for a load balancing solution.
- C. Minimize user interruptions if a service fails on a Client Access server.
- D. Minimize user interruptions if a service fails on a Mailbox server.

Correct Answer: C

NOT A

Introducing a load balancing solution will not minimize hardware costs

NOT B

Introducing a hardware load balancing solution will not minimize software costs

NOT D

A hardware load balancer connects to the Client Access servers not the Mailbox servers.

C

A hardware load balancer connects to the Client Access servers not the Mailbox servers AND is designed to minimize user interruptions

---

#### QUESTION 5

You need to ensure that if a volume fails on EX2 again, a mailbox database copy is recreated automatically on a different volume.

Which command should you run?

- A. Set-MailboxDatabase
- B. Set-MailboxDatabaseCopy
- C. Set-DatabaseAvailabilityGroup
- D. Set-MailboxAutoRcplyConfiguration

Correct Answer: C

Exchange 2013 Auto Reseed Exchange 2013 includes a great new high availability feature that is part of the Database

---

Availability Group. This feature will reseed a database in case of disk failure from a "pool" of volumes that were pre-configured for this propose. In case that the failed drive contained an active database, Exchange will failover to one of the other passive copies and reseed the database. In case that the failed drive contained one of the passive copies, Exchange will reseed the database on the same drive. AutoReseed reduces the need for Exchange Administrator or any other operator, to be on site at the moment of the drive crash and replace it as soon as he can in order to preserve the healthy copies structure. <http://www.msexchange.org/articles-tutorials/exchange-server-2013/high-availability-recovery/exchange-2013-automatic-reseed.html> <http://blogs.technet.com/b/pfemsgil/archive/2013/04/25/3560621.aspx>
