QUESTION 1

HOTSPOT

You have an Exchange Server 2013 organization and a Microsoft SharePoint Server 2013 server farm.

The SharePoint server farm contains the servers shown in the following table:

Server name	Configuration
Web1	Front-end web server
Web2	Front-end web server
App1	Application server
App2	Application server
SQL1	Database server
SQL2	Database server

You plan to use a SharePoint eDiscovery Center.

You need to recommend which component must be deployed before you can use the SharePoint eDiscovery Center for In-Place eDiscovery.

What should you recommend? To answer, select the appropriate options in the answer area.

Hot Area:

Answer Area

Component to install:

Exchange Server 2013 Management Pack

Exchange Server 2013 management tools

Exchange Web Service (EWS) Managed API

Location in which to install the component:

App1 and App2

SQL1 and SQL2

Web1 and Web2

Correct Answer:

Answer Area

Component to install:

Exchange Server 2013 Management Pack
Exchange Server 2013 management tools
Exchange Web Service (EWS) Managed API

Location in which to install the component:

App1 and App2
SQL1 and SQL2
Web1 and Web2

You must ensure that the Exchange Web Service managed API is installed on every front-end server that is running SharePoint Server 2013. Reference: Configure eDiscovery in SharePoint Server 2013 <https://technet.microsoft.com/en-us/library/fp161514.aspx>

QUESTION 2

DRAG DROP

You have an Exchange Server 2013 database availability group (DAG). Each member of the DAG has two network interfaces named Network1 and Network2.

Network1 is used for client connections. Network2 is used for database replication.

Network2 fails.

You discover that replication traffic is sent over Network1.

You need to ensure that all of the database replication traffic is sent over Network2. The solution must minimize database replication downtime.

Which three actions should you perform?

To answer, move the three appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions	Answer Area
Run the Resume-MailboxDatabaseCopy cmdlet.	
Run the Update-MailboxDatabaseCopy cmdlet.	
Restore network connectivity to Network2.	
Run the Suspend-MailboxDatabaseCopy cmdlet.	
Modify the binding order of the network connections.	

Correct Answer:

Actions	Answer Area
	Run the Suspend-MailboxDatabaseCopy cmdlet.
Run the Update-MailboxDatabaseCopy cmdlet.	Restore network connectivity to Network2.
	Run the Resume-MailboxDatabaseCopy cmdlet.
Modify the binding order of the network connections.	

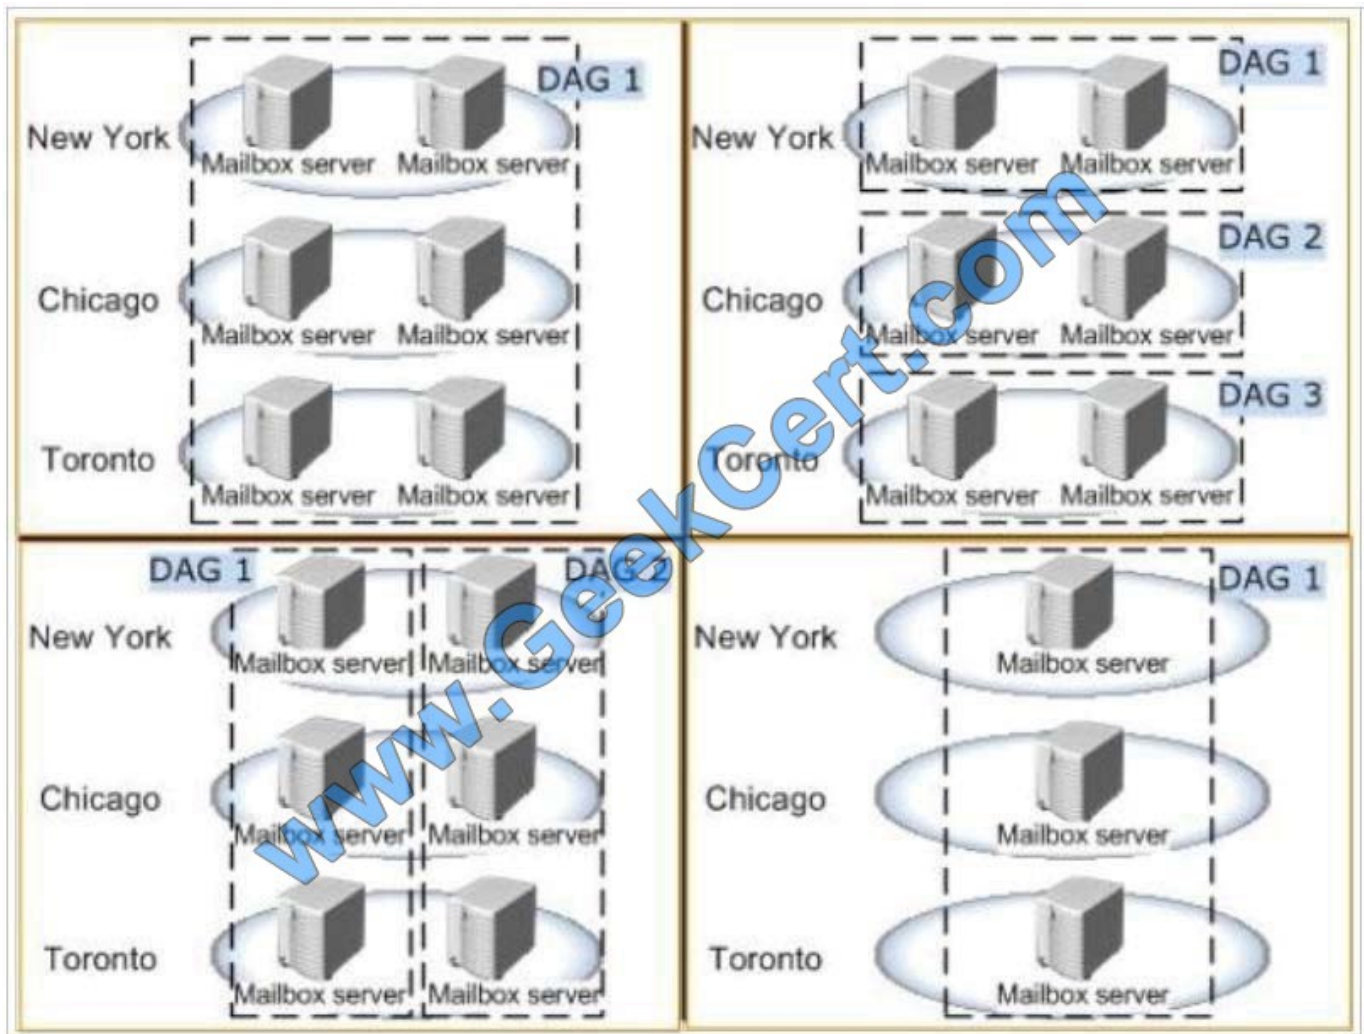

QUESTION 3

You need to recommend a database availability group (DAG) design that meets the technical requirements.

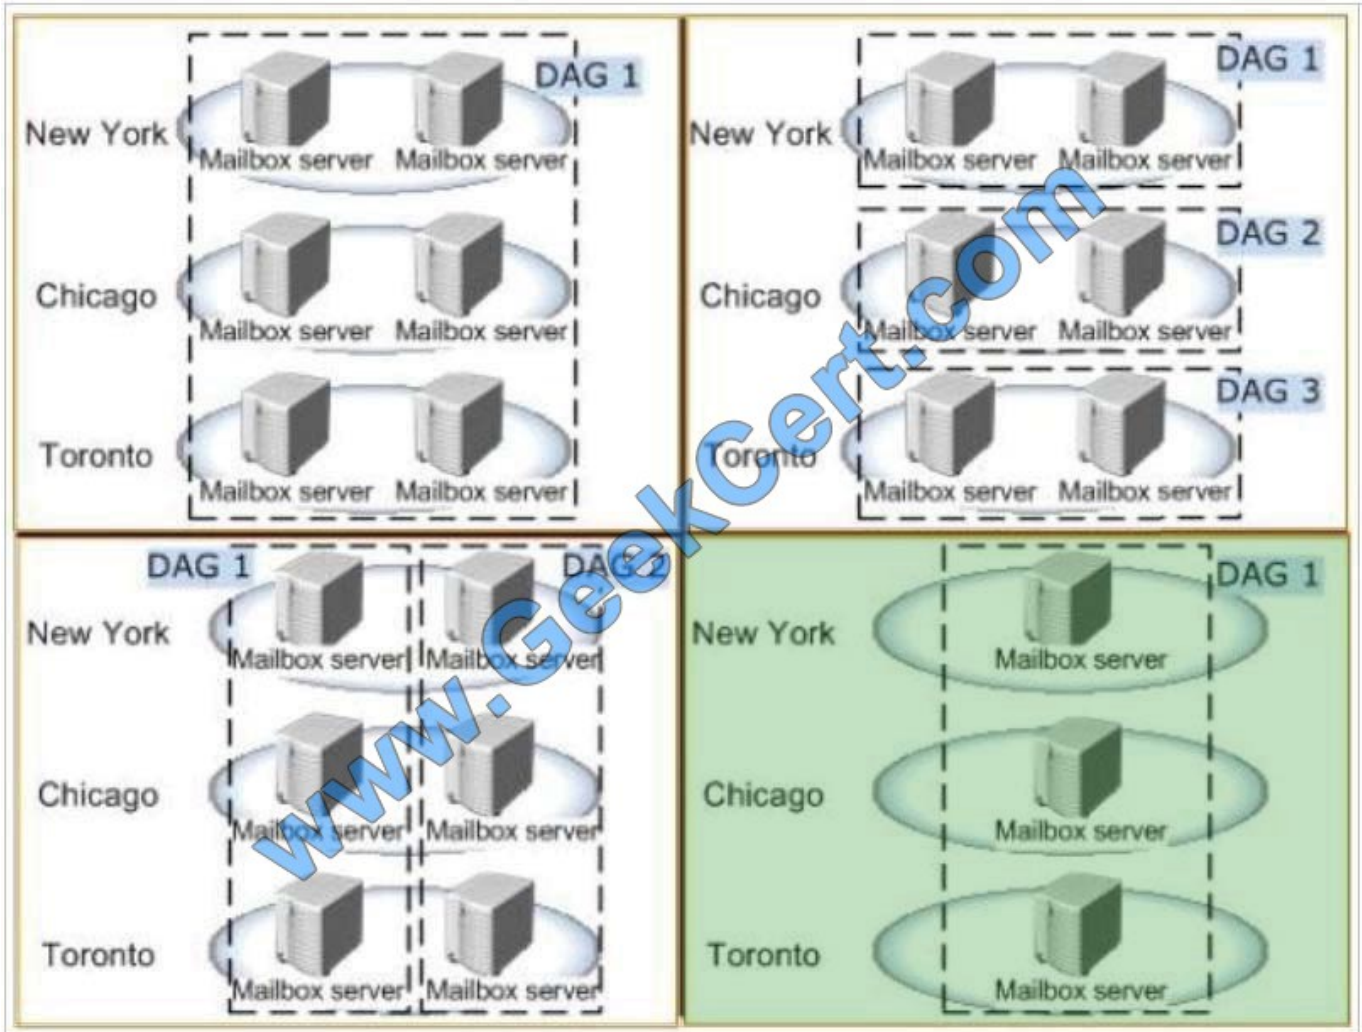

Which DAG design should you recommend?

To answer, select the appropriate design in the answer area.

Hot Area:

Correct Answer:

QUESTION 4

You have an Exchange Server 2013 organization.

You create a data loss prevention (DLP) policy. The mode of the DLP policy is set to Enforce.

You need to ensure that email messages containing social security numbers from the United States are blocked.

Which two possible rules achieve this goal? (Each correct answer presents a complete solution.)

Choose two.)

- A. U.S. State Breach: Allow Override
- B. U.S. State Breach: Scan email sent outside - low count
- C. U.S. State Breach: Scan email sent outside - high count
- D. U.S. State Breach: Scan text limit exceeded

E. U.S. State Breach: Attachment not supported

Correct Answer: BC

Note:

*

In Microsoft Exchange Server 2013, you can use data loss prevention (DLP) policy templates to help meet the messaging policy and compliance needs of your organization. These templates contain pre-built sets of rules that can help you

manage message data that is associated with several common legal and regulatory requirements.

*

DLP policy templates in Exchange include:

U.S. State Breach Notification Laws

Helps detect the presence of information subject to U.S. State Breach Notification Laws, including data like social security and credit card numbers.

QUESTION 5

HOTSPOT

You have an Exchange Server 2013 organization that contains two servers named EX1 and EX2. Both servers are in the same Active Directory site.

You run Get-TransportConfig | fi "shadow" and you receive the following output.

ShadowRedundancyEnabled	:	True
ShadowHeartbeatTimeoutInterval	:	00:15:00
ShadowHeartbeatRetryCount	:	12
ShadowHeartbeatFrequency	:	00:02:00
ShadowResubmitTimeSpan	:	02:00:00
ShadowMessageAutoDisCardInterval	:	3.00:00:00
RejectMessageOnShadowFailure	:	False
ShadowMessagePreferenceSetting	:	PreferRemote
MaxRetriesForLocalSiteShadow	:	2
MaxRetriesForRemoteSiteShadow	:	4

Use the drop-down menus to select the answer choice that completes each statement.

Hot Area:

Answer Area

The maximum amount of time EX1 will wait before opening an SMTP connection to EX2 to check the discard status of messages is [answer choice].

	▼
two minutes	
four minutes	
two hours	
two days	

When a primary server is unreachable, a server will wait [answer choice] before taking ownership of the shadow messages in its shadow queue.

	▼
two minutes	
four minutes	
two hours	
three hours	

Correct Answer:

Answer Area

The maximum amount of time EX1 will wait before opening an SMTP connection to EX2 to check the discard status of messages is [answer choice].

	▼
two minutes	
four minutes	
two hours	
two days	

When a primary server is unreachable, a server will wait [answer choice] before taking ownership of the shadow messages in its shadow queue.

	▼
two minutes	
four minutes	
two hours	
three hours	

Target 1: ShadowHeartFrequency is 2 minutes and MaxRetriesForLocalSiteShadow is 2.

Target 2: ShadowResubmitTimeSpan parameter is set to 02:00:00

The SMTP communication between the shadow server and the primary server is used as the heartbeat that determines

the availability of the servers. If the shadow server can't open an SMTP session with the primary server after a preconfigured time interval, or if the transport database of the primary server has a different database ID, the shadow server promotes itself as the primary server, promotes the shadow messages as primary messages, and transmits the messages to the next hop. The time interval is controlled by the ShadowResubmitTimeSpan parameter on the Set-TransportConfig cmdlet. The default value is 3 hours.

Incorrect:

* Use the ShadowMessageAutoDiscardInterval parameter of the Set-TransportConfig cmdlet to configure the maximum age for shadow messages in your organization. By default, shadow messages are discarded automatically after two days. Assume that due to the hardware constraints on your servers, you don't want to retain shadow copies for messages that are delayed. This example reduces the retention period of shadow messages to four hours for your organization. Set-TransportConfig -ShadowMessageAutoDiscardInterval 04:00:00
