QUESTION 1

You have a server named EX01 that runs Exchange Server 2016. The disks on EX01 are configured as shown in the following table.

Volume name	Type	Contents
C	RAID1	Operating system
D	RAID10	Mailbox database named DB1
E	RAID10	Mailbox database named DB2

All users access their email by using Microsoft Outlook 2013.

From Performance Monitor, you discover that the MSExchange Database\I/O Database Reads Average Latency counter displays values that are higher than normal.

You need to identify the impact of the high counter values on user connections in the Exchange Server organization.

What are two client connections that will report slower performance when opening email messages? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Outlook in Online Mode
- B. Outlook in Cached Exchange Mode
- C. Outlook on the web
- D. IMAP4 clients
- E. mobile devices using Exchange Active Sync

Correct Answer: AC

QUESTION 2

Your company has an Exchange Server 2016 organization named contoso.com.

You need to recommend a solution that meets following requirements:

A user named User1 must be able to send email messages by using an alias of sales@contoso.com in the From field.

Recipients of the messages must be prevented from identifying the actual sender of the message.

User1 and a user named User2 must each receive a copy of replies to sales@contoso.com

What should you recommend?

- A. Create a distribution group named Sales that has an alias of Sales. Add User1 and User2 to the group. Assign the Send As permissions to User1.
- B. Create a shared mailbox named Sales that has an Alias of Sales. Assign the Receive As permission User1 and User2. Assign the Send As permissions to User1.
- C. Create a shared mailbox named Sales that has an Alias of Sales. Assign the Receive As permission User1 and User2. Assign the Send on Behalf permission to User1.
- D. Create a distribution group named Sales that has an alias of Sales. Add User1 and User2 to the group. Assign the send on Behalf permission to User1.

Correct Answer: A

QUESTION 3

Your company has two offices. The offices are located in San Francisco and Los Angeles. Each office contains a data center. Each data center has a local connection to the Internet.

You deploy an Exchange Server 2016 organization named Contoso and install three servers in each data center. All of the servers are members of a single database availability group (DAG). Each data center hosts 2,000 mailboxes that replicate to the other data center.

You create four records in DNS. The records are configured as shown in the following table.

Record Name	Type	Points to	Zone
Lamail.contoso.com	A	Los Angeles data center	Public
Sfmail.contoso.com	A	San Francisco data center	Public
Mail.contoso.com	CNAME	Lamail.contoso.com Sfmail.contoso.com	Public
Mail.contoso.com	A	Los Angeles data center	Internal

You need to recommend a client access solution for the organization to meet the following requirements:

When connecting from the Internet, all users must connect to the same namespace for Outlook on the Web.

If a connection to the Internet fails at one data center, all users must be able to access their mailbox from the Internet.

When connecting from the Internet, all user connections to Exchange ActiveSync must be balanced equally across both data centers.

What is the best recommendation to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

- A. In the San Francisco office, configure the internal URLs of the servers to use the internal URL of sfmail.contoso.com. In the Los Angeles office, configure the internal URLs of the servers to use the internal URL of lamail.contoso.com.
- B. In the San Francisco office, configure the external URLs of the servers to use the internal URL of sfmail.contoso.com. In the Los Angeles office, configure the internal URLs of the servers to use the external URL of lamail.contoso.com.
- C. Deploy a hardware-based load balancer to each office and configure all of the internal URLs to use mail.contoso.com.
- D. Deploy a hardware-based load balancer to each office and configure all of the external URLs to use mail.contoso.com.

Correct Answer: D

QUESTION 4

You are deploying a new Exchange Server 2016 organization.

You deploy two servers named ex01.contoso.com and ex02.contoso.com to the organization.

You need to configure DNS to ensure that servers on the internet can send email messages to the organization by using an SMTP domain named contoso.com. The solution must ensure that ex02.contoso.com is used only if ex01.contoso.com becomes unavailable. You create an MX record for contoso.com that points to ex01.contoso.com. The record has a preference value of 10

What command should you run? To answer, select the appropriate options in the answer area

QUESTION 5

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Exchange Server 2016 organization.

Some users access the mailbox on their mobile device by using Exchange ActiveSync.

You need to prevent the users from synchronizing more than one month of email or calendar data to their device.

Solution: You deploy an Outlook on the web mailbox policy.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A

The web mailbox policy includes the Maximum calendar age filter setting, which specifies the maximum range of calendar days that can be synchronized to the mobile phone. The value is specified in days. References:
