QUESTION 1

You need to configure the environment to support new product announcements from the marketing department.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions	Answer Area
In SharePoint Online, create a SharePoint team site	
Create a SharePoint publishing site in the on-premises SharePoint farm	
In SharePoint Online, create a communication site	
Select a collaboration site template	
Select the Showcase site design	
In SharePoint Online, create an Office 365 group. Grant the group permissions to create sites	
Grant the marketing group permission to create Office 365 groups and SharePoint Online sites	

Correct Answer:

Actions	Answer Area
In SharePoint Online, create a SharePoint team site	In SharePoint Online, create a communication site
Create a SharePoint publishing site in the on-premises SharePoint farm	Select the Showcase site design
In SharePoint Online, create a communication site	Grant the marketing group permission to create Office 365 groups and SharePoint Online sites
Select a collaboration site template	
Select the Showcase site design	
In SharePoint Online, create an Office 365 group. Grant the group permissions to create sites	
Grant the marketing group permission to create Office 365 groups and SharePoint Online sites	

QUESTION 2

An organization purchases an Office 365 plan for 10,000 user accounts. You have a domain controller that runs Windows Server 2008 R2. The forest functional level is set to Windows Server 2000.

The organization must be able to synchronize user attributes from the on-premises Active Directory Domain Services environment to Office 365.

You need to prepare to install the Azure AD Connect

Which two actions should you perform? Each correct answer presents part of the solution.

- A. Upgrade the domain controller to Windows Server 2012.
- B. Install Microsoft .NET Framework 3.5SP1 and Microsoft .NET Framework 4.0.
- C. Install Windows Server 2012 Standard edition.
- D. Raise the forest functional level to Windows Server 2008 R2.
- E. Join a workstation to an Active Directory domain.

Correct Answer: BD

B: The directory synchronization computer must run the Microsoft .NET Framework 3.5 SP1 and the Microsoft .NET Framework 4.0 or higher.

D: The minimum forest functional level requirement for Office 365 is Windows Server 2003. We must therefore raise the forest functional level.

QUESTION 3

DRAG DROP

Contoso, Ltd. has an Office 365 tenant. The company has two servers named Server1 and Server2 that run Windows 2012 R2 Server. The servers are not joined to the contoso.com domain. Server2 is deployed to the perimeter network. You

install Secure Sockets Layer (SSL) certificates on both servers.

You deploy internal and external firewalls. All firewalls allow HTTPS traffic.

You must deploy single sign-on (SSO) and Active Directory Federation Services (AD FS).

You need to install and configure all AD FS components in the environment.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions

Join Server1 and Server2 to the contoso.com domain.

Install and configure AD FS on Server1.

Run the following Windows PowerShell cmdlet on Server2:

Install-WindowsFeature

Run the following Windows PowerShell cmdlet on Server2:

Install-WebApplicationProxy

Run the following Windows PowerShell cmdlet on Server2:

Install-AdfsFarm

Join Server1 to the contoso.com domain.

Run the following Windows PowerShell cmdlet on Server2:

New-WebApplication

Navigation icons: left arrow, right arrow, up arrow, down arrow

Correct Answer:

Actions

Answer Area

Join Server1 and Server2 to the contoso.com domain.	Join Server1 to the contoso.com domain.
Install and configure AD FS on Server1.	Install and configure AD FS on Server1.
Run the following Windows PowerShell cmdlet on Server2: Install-WindowsFeature	Run the following Windows PowerShell cmdlet on Server2: Install-WindowsFeature
Run the following Windows PowerShell cmdlet on Server2: Install-WebApplicationProxy	Run the following Windows PowerShell cmdlet on Server2: Install-WebApplicationProxy
Run the following Windows PowerShell cmdlet on Server2: Install-AdfsFarm	
Join Server1 to the contoso.com domain.	
Run the following Windows PowerShell cmdlet on Server2: New-WebApplication	

QUESTION 4

Contoso, Ltd. is a global manufacturing company with headquarters in Dallas. All sales users are located at the headquarters. Currently all Contoso, Ltd. users use the following on-premises services:

Microsoft Exchange Server 2016

Microsoft Skype for Business Server 2015

Active Directory Domain Services (AD DS) domain for contoso.com

Many temporary workers are hired and terminated on a regular basis at the Dallas location, Contoso, Ltd. purchases two other manufacturing companies, Fabrikam, Inc. and ADatum Corporation. Fabrikam, Inc. is based in London. Fabrikam,

Inc. has an on-premises thirdparty email system that uses @fabrikam.com for all email addresses. Fabrikam, Inc. does not have an Active Directory domain.

ADatum Corporation is based in Paris. The company is in the process of migrating users to Exchange Online. They plan to migrate users to Microsoft OneDrive for Business for file storage and sharing. All ADatum Corporation account identities will be cloud based.

You deploy Microsoft Office 2016 client apps to all corporate devices.

In preparation for the deployment of Office 365 services, you set up the latest version of Azure Active Directory (Azure AD) Connect for the contoso.com domain. The application runs on Server1.contoso.com and uses a Microsoft SQL Server

database instance that runs on Server2.contoso.com. The sync schedule is configured to synchronize every two hours.

You purchase the following four servers for future needs: Server3, Server4, Server5, and Server6. All new servers for the contoso.com domain must run Windows Server 2012 R2.

Business Requirements

Contoso, Ltd. users must be able to store and share personal documents that are accessible from any web browser or mobile device. Fabrikam, Inc. users must be able to send individual instant messages as well as use group chat workspaces.

Office 365

New services should be implemented in Office 365 when possible. There is also a strong push to move existing services to Office 365, but there is currently no money in the budget for data migration. The least expensive Office 365 plan must be used whenever possible.

Password policies

You must implement the following password policies for ADatum Corporation users.

Policy	Value
Set user passwords to never expire	No
Days before passwords expire	180
Days before user is notified about expiration	14

Contoso Sync

You receive reports that new users are not granted access to Office 365 resources fast enough. You must ensure that new accounts are provisioned as quickly as possible.

You observe that the accounts for many temporary workers have not been deprovisioned correctly. You need to ensure terminated users have their access and accounts removed.

You must ensure that up to 1,000 accounts can be deleted correctly during each Azure AD Connect sync cycle. You must ensure that deletions of over 1,000 accounts at a time cannot occur.

Single Sign-On

Contoso.com users need to start using sign-on (SSO) for Office 365 resources so they can authenticate against the on-premises Active Directory. Any solution needs to be redundant. Any Internet-facing servers need to reside in the perimeter network.

Problem Statements Authentication Fallback

Sales users report that they were not able to access any Office 365 resources.

Contoso.com users must be able to access Office 365 resources if the on-premises

authentication resources are down or unavailable. You also need to quickly resume SSO

authentication when on-premises servers are available again.

ADatum Corporation users report issues sending and receiving emails. Some business partners report that emails from ADatum Corporation are rejected because the receiving server cannot validate that emails come from an authorized

messaging server.

You need to implement an authentication solution for contoso.com users.

What should you do?

- A. Install two Active Directory Federation Services (AD FS) servers and two AD FS Proxy servers.
- B. Install a second Azure AD Connect server. Add a second SQL Server instance in an Always On Failover Cluster and implement password sync.
- C. Install two Active Directory Federation Services (AD FS) servers and two Web Application Proxy (WAP) servers.
- D. Install a single Active Directory Federation Services (AD FS) server and a single Web Application
- E. Proxy (WAP) server.

Correct Answer: A

QUESTION 5

Fabrikam is a manufacturing company. You manage an on-premises Microsoft Exchange Server environment as well as an Exchange Online environment that is set up as a hybrid environment for the Fabrikam.com and devfabrikam.com domains. The company recently merged with TailSpin Toys. They have also bought another company named Contoso Ltd. There are no plans to merge with Contoso Ltd. as that company's resources will remain separate from Fabrikam, Inc.

Domains

Fabrikam, Inc. has two separate Active Directory Domain Services (AD DS) domains. The domain named fabrikam.com is used for production. The domain named devfabrikam.com is used for development only. TailSpin Toys has an AD DS domain named tdilspmt toys.com. Contoso Ltd. has an AD DS domain named contoso.com.

The development environment is used to deploy new features that are being tested for implementation in the production environment. No features can be deployed into production until they have
