### QUESTION 1

You plan to allow users to run internal applications from outside the company's network.

You have a Windows Server 2012 R2 that has the Active Directory Federation Services (AD FS) role installed. You must secure on-premises resources by using multi-factor authentication (MFA). You

need to design a solution to enforce different access levels for users with personal Windows 8.1 or iOS 8 devices.

Solution: You install a local instance of MFA Server. You connect the instance to the Microsoft Azure MFA provider, and then run the following Windows PowerShell cmdlet.

```
Enable-AdfsDeviceRegistration
```

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

We must install AD FS Adapter, not register a host for the Device Registration Service.

Note: The Enable-AdfsDeviceRegistration cmdlet configures a server in an Active Directory Federation Services (AD FS) farm to host the Device Registration Service.

### QUESTION 2

You are planning the deployment of System Center 2012 Virtual Machine Manager (VMM). You need to identify which additional System Center 2012 product is required to meet the virtualization requirements. What should you include in the recommendation?

A. App Controller

B. Operations Manager

C. Configuration Manager

D. Service Manager

Correct Answer: B

Business Requirements	Technical Requirements	Virtualization Requirements	All
<p>The company identifies the following virtualization requirements:</p> <ul style="list-style-type: none"><li>Minimize the number of permissions and privileges assigned to users.</li><li>Ensure that the members of a group named Group1 can add a WSUS server to the fabric.</li><li>Ensure that a diagram view of the virtualization environment can be generated dynamically.</li><li>Minimize the amount of administrative effort required to manage the virtualization environment.</li><li>Prevent the failure of a front-end web server from affecting the availability of the CRM application.</li><li>Ensure that the members of a group named Group1 can create new virtual machines in the Los Angeles office only.</li><li>Only create virtual machine templates by using objects that already exist in the System Center 2012 Virtual Machine Manager (VMM) library.</li><li>On the failover cluster in the main office, apply limited distribution release (LDR) updates to the virtualization hosts without disrupting the virtual machines hosted on the virtualization hosts.</li></ul> <p>System Center 2012 – Operations Manager provides infrastructure monitoring that is flexible and cost-effective, helps ensure the predictable performance and availability of vital applications, and offers comprehensive monitoring for your datacenter and cloud, both private and public.</p>

### QUESTION 3

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory domain named contoso.com. The domain contains a Microsoft System Center 2012 R2 infrastructure.

You deploy a service named Service1 by using a service template. Service1 contains two virtual machines. The virtual machines are configured as shown in the following table.

Virtual machine name	Roles and software
VM1	Web server Windows Server 2012 R2 Operations Manager agent Configuration Manager agent
VM2	Windows Server 2012 R2 Operations Manager agent Microsoft SQL Server 2014 Service Pack (SP2) Configuration Manager agent

You need to recommend a monitoring solution to ensure that an administrator can review the availability information of

---

Service1.

Solution: From Operations Manager, you create a Distributed Application and a Monitor Override.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

#### QUESTION 4

Your network contains an Active Directory domain named contoso.com.

Your company has an enterprise root certification authority (CA) named CA1.

You plan to deploy Active Directory Federation Services (AD FS) to a server named Server1.

The company purchases a Microsoft Office 365 subscription.

You plan to register the company's SMTP domain for Office 365 and to configure single sign-on for all users.

You need to identify which certificate or certificates are required for the planned deployment.

Which certificate or certificates should you identify? (Each correct answer presents a complete solution. Choose all that apply.)

A. a server authentication certificate that is issued by a trusted third-party root CA and that contains the subject name server1.contoso.com

B. a server authentication certificate that is issued by CA1 and that contains the subject name Server1

C. a server authentication certificate that is issued by a trusted third-party root CA and that contains the subject name Server1

D. a server authentication certificate that is issued by CA1 and that contains the subject name server1.contoso.com

E. self-signed server authentication certificates for server1.contoso.com

Correct Answer: DE

---

#### QUESTION 5

Your network contains an Active Directory domain named contoso.com. The domain contains Server 2012 R2 and has the Hyper-V server role installed.

You need to log the amount of system resources used by each virtual machine.

What should you do?

- A. From Windows PowerShell, run the Enable-VMResourceMetering cmdlet.
- B. From Windows System Resource Manager, enable Accounting.
- C. From Windows System Resource Manager, add a resource allocation policy.
- D. From Windows PowerShell, run the Measure-VM cmdlet.

Correct Answer: A

The Enable-VMResourceMetering cmdlet collects resource utilization data for a virtual machine or resource pool.
