QUESTION 1

Your network contains an Active Directory domain named contoso.com. You plan to deploy personal virtual desktops.

You create a standard desktop that contains multiple desktop shortcuts to line-of-business applications. Administrators frequently update the desktop shortcuts.

You need to recommend a solution to prevent users from modifying the desktop shortcuts and from adding additional files to the desktop.

What should you include in the recommendation?

More than one answer choice may achieve the goal. Select the BEST answer.

- A. Roaming profiles and NTFS permissions
- B. Mandatory profiles
- C. User profile disks
- D. Folder Redirection and NTFS permissions

Correct Answer: D

QUESTION 2

Your network contains an Active Directory domain named contoso.com. The domain has Microsoft System Center 2012 Configuration Manager installed.

You need to ensure that you can modify boot images by using the Configuration Manager console. What should you do?

- A. Create a custom task sequence.
- B. Install the Windows Automated Installation Kit (Windows AIK).
- C. Install Microsoft Deployment Toolkit (MDT) 2012.
- D. Create a deployment package.

Correct Answer: C

QUESTION 3

Your company has a main office and a branch office.

The network contains an Active Directory domain named contoso.com. The domain contains two servers named Server1 and Server2 that run Windows Server 2012. Server1 has the Windows Server Update Services server role installed and

configured.

Server1 is located in the main office. Server2 is located in the branch office.

You plan to install Windows Server update Services (WSUS) on Server2.

You need to configure the update infrastructure to meet the following requirements:

Only updates approved by the administrator in the main office must be installed on client computers in the branch office.

The local administrator in the branch office must not be able to approve updates. Bandwidth usage between the offices must be minimized.

What should you do?

- A. Configure Server2 as a downstream server in autonomous mode.
- B. On Server1, configure a computer group that contains the client computers in the branch office, and then set the approvals to Automatic.
- C. On Server1, configure a client computer group that contains Server2, and then set the approvals to Automatic.
- D. Configure Server2 as a downstream server in replica mode.

Correct Answer: D

QUESTION 4

Your company has a main office and multiple branch offices.

The network contains an Active Directory domain named contoso.com. All servers run Windows Server 2008 R2. All client computers run Windows 7.

All users are configured to use roaming profiles and Folder Redirection. Each user has a personal laptop computer and a personal desktop computer. Users occasionally log on to other computers.

The company introduces a new security policy, which requires that roaming profiles and redirected folders only be downloaded to the users\' personal laptop computer and desktop computer. You need to prepare the environment to meet the

new security policy. You want to achieve this goal by using the minimum amount of administrative effort.

What should you do? (Each correct answer presents part of the solution. Choose all that apply.)

- A. Upgrade the Active Directory schema to Windows Server 2012.
- B. Raise the domain functional level to Windows Server 2012.
- C. Upgrade all of the client computers to Windows 8.
- D. Raise the forest functional level to Windows Server 2012.
- E. Upgrade all of the domain controllers to Windows Server 2012.

Correct Answer: BE

First upgrade the domain controller to Windows Server 2012, then raise the domain functional level to 2012.

QUESTION 5

Your network contains an Active Directory domain named contoso.com. The domain has Microsoft System Center 2012 Configuration Manager deployed.

You use Configuration Manager to deploy Windows updates to client computers.

Your company has several line-of-business applications deployed. The application developer uses Windows Installer patches (.msp files) to provide the company with application updates. You need to recommend a solution to integrate the

deployment of the application updates into the current update infrastructure.

What should you include in the recommendation?

- A. Windows Assessment and Deployment Kit (Windows ADK)
- B. Microsoft Deployment Toolkit (MDT)
- C. Microsoft Security Compliance Manager
- D. Microsoft System Center Updates Publisher 2011

Correct Answer: D
