### QUESTION 1

You have a Microsoft Application Virtualization (App-V) publishing server named Server1. Some users connect to the network by using a cellular connection.

You need to prevent the users from downloading App-V packages the first time they run the application that is associated to the package.

What should you do? More than one answer choice may achieve the goal. Select the BEST answer.

- A. From a Group Policy object (GPO), configure the App-V Streaming settings.
- B. From a Group Policy object (GPO), configure the App-V Publishing settings.
- C. From each client computer, run the Set-AppvClientConfiguration cmdlet.
- D. From each client computer, run the Set-AppvClientPackage cmdlet.

Correct Answer: A

### QUESTION 2

Your network contains an Active Directory domain named contoso.com. Your company plans to deploy a Remote Desktop Services (RDS) infrastructure that will contain six Remote Desktop Session Host (RD Session Host) servers and three applications. The servers will be configured as shown in the following table.

Server name	Applicationname
Server1	App1
Server2	App1 and App2
Server3	App3
Server4	App3
Server5	App1, App2, and App3
Server6	App1, App2, and App3

You need to identify how many session collections will be required to publish the applications on the RD Session Host servers. How many session collections should you identify?

- A. 1
- B. 2
- C. 3
- D. 4

Correct Answer: D

### QUESTION 3

Your network contains an Active Directory domain named contoso.com. The domain contains 2,000 client computers that run either Windows 7 or Windows 8.

Version 1.0 of a custom application named App1 is deployed to all of the client computers by using a Group Policy object (GPO).

You obtain version 2.0 of App1.

You need to upgrade App1 to version 2.0 on the client computers that run Windows 8 only. App1 must be upgraded when each client computer restarts.

What should you do? More than one answer choice may achieve the goal. Select the BEST answer.

- A. Assign version 2.0 of App1 by using a new GPO. Configure WMI filtering on the GPO.
- B. Publish version 2.0 of App1 by using a new GPO. Configure WMI filtering on the GPO.
- C. Publish version 2.0 of App1 by using a new GPO. Configure security filtering on the GPO.
- D. Assign version 2.0 of App1 by using a new GPO. Configure security filtering on the GPO.

Correct Answer: A

Publishing an application only makes the application available and does not install the app. WMI filtering allows you to specify OS.

---

### QUESTION 4

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that has the Remote Desktop Licensing role service installed.

Server1 fails.

You discover that all of the backups for Server1 are unavailable. You deploy a new server named Server2. You install the Remote Desktop Licensing role service on Server2.

You need to rebuild the Remote Desktop Licensing (RD Licensing) database on Server2.

Which tool should you use?

- A. Server Manager
- B. The Add-RDLicense cmdlet
- C. The RD Licensing Diagnoser
- D. Remote Desktop Licensing Manager

Correct Answer: D

To rebuild the RD Licensing database automatically

1. On the license server, open Remote Desktop Licensing Manager. To open Remote Desktop Licensing Manager, click Start, point to Administrative Tools, point to Remote Desktop Services, and then click Remote Desktop Licensing Manager.

## QUESTION 5

Your network contains an Active Directory domain named contoso.com. The domain contains a Microsoft Application Virtualization (App-V) 5.0 infrastructure. You package two complex applications named App1 and App2. You create a connection group that contains App1 and App2.

You discover that App2 overwrites some of the registry settings used by App1.

You need to recommend a solution for the deployment of App1 and App2 to meet the following requirements:

Prevent App2 from overwriting the registry settings of App1.

Ensure that App1 and App2 can share information.

What should you recommend? More than one answer choice may achieve the goal. Select the BEST answer.

- A. Change the order of packages in the package library.
- B. Modify the PackageId of App1.
- C. Change the order of packages in the connection group.
- D. Create a single package that contains App1 and App2.
- E. Modify the VersionId of App1.

Correct Answer: C

<http://blogs.technet.com/b/appv/archive/2012/11/06/deploying-connection-groups-app-v-5-0.aspx> Note: The order of packages in the connection group is important. This determines the order in which the package contents are merged. So, in the following case, if there was a conflict (example: same registry value), the content of the "App1" package would be used.
