### QUESTION 1

Your role of Network Administrator at ABC.com includes the management of the Active Directory Domain Services (AD DS) domain named ABC.com. The network includes servers that run Windows Server 2012.

A Windows Server 2012 named ABC-DFS1 runs the Distributed File System (DFS) role. The company has purchased four new servers. You plan to install Windows Server 2012 with the failover clustering role on the new servers and configure all four servers as nodes in a single failover clustering cluster. You need to configure a highly available folder on the cluster. The folder will be a target in a DFS namespace and will be replicated to other servers on the network. You need to ensure that the folder can be configured as a DFS target and be

replicated to other servers using DFS replication (DFSR). How should you configure the failover cluster?

- A. You should configure the affinity option.
- B. You should configure the possible owner option.
- C. You should configure the Scale-Out File Server option
- D. You should configure the File Server for General Use option.
- E. You should configure the preferred owner option.

Correct Answer: D

---

### QUESTION 2

Your network contains an Active Directory forest named contoso.com. The forest contains four domains. All servers run Windows Server 2012 R2.

Each domain has a user named User1.

You have a file server named Server1 that is used to synchronize user folders by using the Work Folders role service.

Server1 has a work folder named Sync1.

You need to ensure that each user has a separate folder in Sync1.

What should you do?

- A. From Windows Explorer, modify the Sharing properties of Sync1
- B. Run the Set-SyncServerSetting cmdlet
- C. From File and Storage Services in Server Manager, modify the properties of Sync1
- D. Run the Set-SyncShare cmdlet

Correct Answer: D

---

### QUESTION 3

Your network contains an Active Directory domain named contoso.com.

The domain contains a server named Server1 that runs Windows Server 2008 R2.

You plan to test Windows Server 2012 R2 by using native-boot virtual hard disks (VHDs).

You have a Windows image file named file1.wim. You need to add an image of a volume to file1.wim.

What should you do?

- A. Run imagex.exe and specify the /append parameter.
- B. Run imagex.exe and specify the /export parameter.
- C. Run dism.exe and specify the /image parameter.
- D. Run dism.exe and specify the /append-image parameter.

Correct Answer: D

The Deployment Image Servicing and Management (DISM) tool is a command-line tool that enables the creation of Windows image (.wim) files for deployment in a manufacturing or corporate IT environment. The /Append-Image option

appends a volume image to an existing .wim file allowing you to store many customized Windows images in a fraction of the space. When you combine two or more Windows image files into a single .wim, any files that are duplicated between

the images are only stored once.

Incorrect Answers:

A, B: Imagex has been retired and replaced by dism.

#### QUESTION 4

DRAG DROP

You have a file server named Server1 that runs Windows Server 2012 R2. The folders on Server1 are configured as shown in the following table.

Folder name	NTFS encryption	NTFS compression
Folder1	No	No
Folder2	Yes	No
Folder3	No	Yes

A new corporate policy states that backups must use Microsoft Online Backup whenever possible. You need to identify which technology you must use to back up Server1. The solution must use Microsoft Online Backup whenever possible.

What should you identify?

To answer, drag the appropriate backup type to the correct location or locations. Each backup type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Select and Place:

The screenshot shows a drag-and-drop interface. On the left, under 'Backup Type', are two buttons: 'Microsoft Online Backup' and 'Windows Server Backup'. On the right, under 'Answer Area', are four slots labeled 'Backup type' corresponding to 'Folder1', 'Folder2', 'Folder3', and 'System State'. A watermark 'www.GeekCert.com' is visible across the center.

Correct Answer:

The screenshot shows the same interface as before, but now the 'Answer Area' slots are populated. The first three slots (Folder1, Folder2, Folder3) each contain the 'Microsoft Online Backup' button. The fourth slot (System State) contains the 'Windows Server Backup' button. A watermark 'www.GeekCert.com' is visible across the center.

## QUESTION 5

Your network contains an Active Directory forest named contoso.com. All domain controllers currently run Windows Server 2008 R2 Service Pack 1 (SP1).

You plan to install a new domain controller named DC4 that runs Windows Server 2012 R2.

The new domain controller will have the following configurations: Schema master Global catalog server DNS Server role Active Directory Certificate Services server role

You need to identify which configurations cannot be fulfilled by using the Active Directory Domain Services Configuration Wizard.

Which two configurations should you identify? (Each correct answer presents part of the solution. (Choose two.)

- A. Enable the global catalog server.
- B. Transfer the schema master.
- C. Install the Active Directory Certificate Services role.
- D. Install the DNS Server role.

Correct Answer: BC

AD Installation Wizard will automatically install DNS and allows for the option to set it as a global catalog server. ADCS and schema must be done separately.

Specify domain controller capabilities and site information

☒ Domain Name System (DNS) server

☒ Global Catalog (GC)

☐ Read only domain controller (RODC)

Site name:

Default-First-Site-Name

Type the Directory Services Restore Mode (DSRM) password
