QUESTION 1

Yon manage several SQL Server 2008 instances.

You plan to collect performance data periodically on all instances by using the data collector. All collected data must be stored in the same database hosted on a single instance.

You need to collect and load performance data in the management data warehouse every 6 hours.

Which data collection process should you implement?

A. Create a cached data collection.

B. Create a scheduled non-cached data collection.

C. Create an on-demand non-cached data collection.

D. Create two different SQL Agent jobs that are scheduled at the same time. One job creates a data collection and the other job uploads the data collection.

Correct Answer: B

QUESTION 2

You administer a Microsoft SQL Server 2008 R2 database instance.

Occasionally, the following problems occur:

You need to be able to diagnose each of these problems.

Which tool or tools should you use? (To answer, drag the appropriate problem to the correct tool in the answer area. Each problem may be used once, more than once, or not at all. Each tool may be used once or not at all. Additionally, you

may need to drag the split bar between panes or scroll to view content.)

Select and Place:

Problem	Tools	
The SQL Server service fails to start.	Windows Application Log	
A query from the application is running slower than expected.	Dynamic Management Views	
	SQL Server Profiler	
	Activity Monitor	
	SQL Server ERRORLOG	

Correct Answer:

Problem	Tools	
The SQL Server service fails to start.	Windows Application Log	
A query from the application is running slower than expected.	Dynamic Management Views	A query from the application is running slower than expected.
	SQL Server Profiler	A query from the application is running slower than expected.
	Activity Monitor	A query from the application is running slower than expected.
	SQL Server ERRORLOG	The SQL Server service fails to start.

QUESTION 3

You maintain a SQL Server 2008 instance that contains a database named Finance. The data file and the transaction log file are located on the E: drive. The E: drive has only 5 percent available space.

You need to move both files to the V: drive.

Which procedure should you use?

A. Run the following Transact-SQL statement. ALTER DATABASE Finance SET RESTRICTED_USER WITH ROLLBACK_IMMEDIATE; Move the data file and transaction log file to the new location. Run the following Transact-SQL statements. ALTER DATABASE Finance MODIFY FILE (NAME = Finance_Data, FILENAME = \\'v:\SQLServer \Finance_Data.mdf\\'); ALTER DATABASE Finance SET MULTI_USER;

B. Run the following Transact-SQL statement. ALTER DATABASE Finance SET OFFLINE WITH ROLLBACK_IMMEDIATE; Move the data file and transaction log file to the new location. Run the following Transact-SQL statements. ALTER DATABASE Finance MODIFY FILE (NAME = Finance_Data, FILENAME = \\'v:\SQLServer\Finance_Data.mdf\\'); ALTER DATABASE Finance MODIFY FILE (NAME = Finance_Log, FILENAME =\\'v:\SQLServer\Finance_Log.ldf\\'); ALTER DATABASE Finance SET ONLINE;

C. Stop the SQL Server service. Move the data file to the new location. Start the SQL Server service. Run the following Transact-SQL statement. EXEC sp_attach_single_file_db @dbname = N\\'Finance\\', @physname = N\\'v:\SQLServer \Finance_Data.mdf\\';

D. Stop the SQL Server Service. Move the data file and transaction log file to the new location. Start the SQL Server service. Run the following Transact-SQL statement. EXEC sp_attach_db @dbname = N\\'Finance\\', @filename1 = N\\'v: \SQLServer\Finance_Data.mdf\\', @filename2 = N\\'v:\SQLServer\Finance_Log.ldf\\';

Correct Answer: B

QUESTION 4

You administer a Microsoft SQL Server database that hosts an order-processing application.

Employees in the order entry group perform real-time data entry for customers. Employees in the reporting group run historical reports.

Employees in the order entry group report of poor performance when the reporting group runs reports.

You need to limit the amount of CPU and RAM used by the reporting group.

What should you do?

A. Implement Resource Governor by using a Resource Pool assigned to the users of the reporting group to limit the amount of CPU/RAM they can use.

B. Use sp_dbmmonitoraddmonitoring to set up a monitoring process to kill the reporting group\\'s queries that pass a given threshold.

C. Create a set of views in a new schema, and then alter the queries of the reporting group to use these views.

D. Implement Policy Based Management by using the Server Performance facet.

Correct Answer: C

QUESTION 5

You are managing a SQL Server 2008 instance which includes a database called Products for Home.com. On the Products database, logged operations are executed. You should make sure that the database could be recovered to a special point in time. Which is the correct answer?

A. You should clarify that the database utilizes the full recovery model.

B. You should clarify that the database utilizes the half recovery model.

C. You should clarify that the database utilizes the Transactions Log.

D. You should clarify that the database utilizes the store procedure.

Correct Answer: A
