QUESTION 1

You are a database administrator for your company. You have a Data Transformation Services (DTS) package stored in SQL Server 2000 that you want to migrate into SQL Server 2005. The DTS package uses complex Microsoft Visual Basic Scripting Edition (VBScript) to dynamically configure precedence constraints. You run the SQL Server 2005 Package Migration Wizard, which fails to convert the package from SQL Server 2000 to SQL Server 2005. You need to ensure that the DTS package runs in SQL Server 2005. You must get the package running as quickly as possible.

What should you do?

- A. Manually recreate the SQL Server 2000 Data Transformation Services (DTS) package as a SQL Server Integration Services (SSIS) package.
- B. Configure the SQL Server 2000 Data Transformation Services (DTS) task to not use precedence constraints. Then, run the SQL Server 2005 Package Migration Wizard again.
- C. Ensure that the SQL Server 2000 Data Transformation Services (DTS) package is wrapped in an Execute DTS 2000 Package task.
- D. Run the SQL Server 2005 Package Migration Wizard. If the upgrade is not successful, run a Transfer SQL Server Objects task.

Correct Answer: C

QUESTION 2

You need to migrate the DeliveryVans, AirlinePreferences, and SeasonalContractors databases into the data center. What should you do?

- A. Install a separate instance of SQL Server 2005 for each of the databases on a single server.
- B. Create a SQL Server database for each of the databases in a single instance of SQL Server 2005.
- C. Import the data from each of the databases into a single database in an instance of SQL Server 2005.
- D. Install a default instance of SQL Server 2005 on three separate servers. Use one server for each of the databases.

Correct Answer: B

QUESTION 3

You are a database administrator for your company. You have many complex SQL Server Integration Services (SSIS) packages that move data among your servers. The SSIS packages import and export data to and from your company's trading partners. The SSIS packages can only run after certain conditions are met that exist outside of SQL Server. Your department uses a third-party tool to schedule the running of nightly scripts to test for these conditions. You need to run SSIS from your scripts as seamlessly as possible.

What should you do?

- A. When conditions are met in the scripts, have the scripts execute the DTEXec utility to run the SQL Server Integration Services (SSIS) packages.
- B. When conditions are met in the scripts, have the scripts execute the DTUtil utility to run the SQL Server Integration Services (SSIS) packages.
- C. Have the scripts write a status code to a text file that the SQL Server Integration Services (SSIS) packages look for and act upon.
- D. Create a trigger that runs the SQL Server Integration Services (SSIS) packages.

Correct Answer: A

QUESTION 4

You are the administrator of a SQL Server 2005 computer. Your company's database auditing department must receive an e-mail message when the SQL Server service and the SQL Server Agent service are started, stopped, or paused. They also need to receive an e-mail message when the EXECUTE AS option is used with stored procedures and other commands. You need to ensure that the auditing department receives the e-mail messages that they need.

Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)

- A. Use SQL Server Profiler to track the Audit Statement Permission event class.
- B. Use SQL Server Profiler to track the Audit Server Principal Impersonation event class.
- C. Use SQL Server Profiler to track the Audit Server Starts and Stops event class.
- D. Create a Windows Group Policy Object to audit System Events.
- E. Create an Event Notification on the Audit Server Principal Impersonation event class.
- F. Create an Event Notification on the Audit Server Starts and Stops event class.

Correct Answer: EF

QUESTION 5

You need to design the data archiving solution for the CRM database. You want to ensure that the solution requires the minimum amount of administrative effort to implement and that it fulfills the research and auditing requirements. Which action should you specify to occur at the end of each month?

- A. Reorganize the CRM database so that the older data and the newer data are kept on different table partitions.
- B. Export the CRM data to a Microsoft Excel spreadsheet and keep each spreadsheet for five years. After creating each spreadsheet, delete the older data from the CRM database.

C. Use SQL Server Reporting Services (SSRS) to print a copy of the older CRM data, and keep each report for five years. After printing each report, delete the older data from the CRM database.

D. Create a full backup of the CRM database and keep each backup for five years. After creating each backup, delete the older data from the CRM database.

Correct Answer: D
