QUESTION 1

You administer a Microsoft SQL Server 2012 database.

You need to ensure that the size of the transaction log file does not exceed 2 GB.

What should you do?

- A. Execute `sp_configure 'max log size', 2G`.
- B. use the `ALTER DATABASE...SET LOGFILE` command along with the `maxsize` parameter.
- C. In SQL Server Management Studio, right-click the instance and select Database Settings. Set the maximum size of the file for the transaction log.
- D. in SQL Server Management Studio, right-click the database, select Properties, and then click Files. Open the Transaction log Autogrowth window and set the maximum size of the file.

Correct Answer: D

--Burgos - YES (this question is duplicated, I don't remember which are the wrong questions) Verified answer as correct

QUESTION 2

You administer two instances of Microsoft SQL Server 2012. You deploy an application that uses a database on the named instance.

The application is unable to connect to the database on the named instance. You need to ensure that the application can connect to the named instance.

What should you do?

- A. Configure the application as data-tiered.
- B. Open port 1433 on the Windows firewall on the server.
- C. Configure the named SQL Server instance to use an account that is a member of the Domain Admins group.
- D. Start the SQL Server Browser Service.

Correct Answer: D

QUESTION 3

You administer a Microsoft SQL Server instance. You use a two-node SQL Server failover cluster.

Node B is primary, and Node A is secondary.

You need to install a security patch on both nodes.

You need to ensure that the following requirements are met:

Both nodes receive the update.

Downtime is minimized.

No data is lost.

Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

- Pause Node B.
- Pause Node A.
- Failover from Node B to Node A.
- Failover from Node A to Node B.
- Install the security patch on Node B.
- Install the security patch on Node A.
- Stop the SQL Server services on both nodes.

Correct Answer:

- Install the security patch on Node A.
- Failover from Node B to Node A.
- Install the security patch on Node B.

QUESTION 4

You develop a Microsoft SQL Server 2012 database.

You need to create a batch process that meets the following requirements:

Returns a result set based on supplied parameters.

Enables the returned result set to perform a join with a table.

Which object should you use?

- A. inline user-defined function
- B. stored procedure
- C. Table-valued user-defined function
- D. Scalar user-defined function

Correct Answer: C

QUESTION 5

You are creating an application that will connect to the AgentPortal database by using a SQL login named AgentPortalUser. Stored procedures in the database will use sp_send_dbmail to send email messages.

You create a user account in the msdb database for the AgentPortalUser login. You use the Database Mail Configuration Wizard to create a Database Mail profile. Security has not been configured for the Database Mail profile.

You need to ensure that AgentPortalUser can send email messages.

What should you do?

- A. In the Database Mail Configuration Wizard, configure the Database Mail profile as a private profile for the AgentPortalUser account.
- B. Disable the guest user in the msdb database.
- C. Use the sysmail_help_profileaccount_sp stored procedure to add accounts to the Database Mail profile.
- D. In the Database Mail Configuration Wizard, create an email account for each recipient's email address in the Database Mail profile.

Correct Answer: A
