QUESTION 1

You are developing a SQL Server Integration Services (SSIS) package to implement an incremental data load strategy. The package reads data from a source system that uses the SQL Server change data capture (CDC) feature.

You have added a CDC Source component to the data flow to read changed data from the source system.

You need to add a data flow transformation to redirect rows for separate processing of insert, update, and delete operations.

- A. Pivot
- B. Merge
- C. Audit
- D. CDC Splitter

Correct Answer: D

<http://technet.microsoft.com/en-us/library/hh758656.aspx>

QUESTION 2

You are developing a SQL Server Integration Services (SSIS) package.

The package contains an ActiveX Data Objects (ADO) source variable that holds a result set that was returned by a stored procedure execution.

You need to add and configure a container that will execute several tasks for each row in the ADO object source variable.

Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

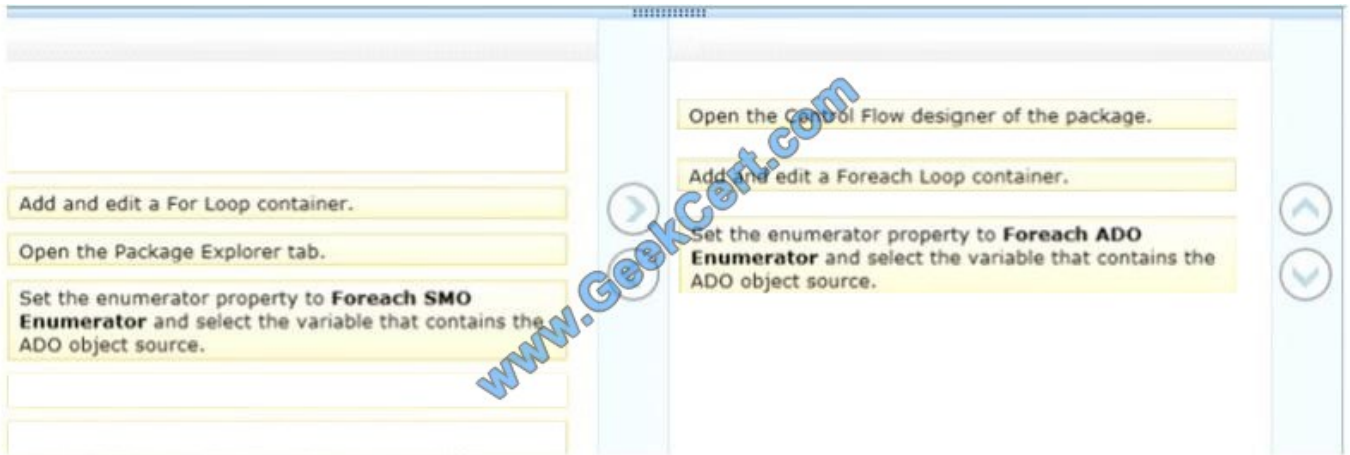

The screenshot shows the SSIS Control Flow Designer interface. On the left, there is a list of actions to be selected and placed into a container. The actions are:

- Set the enumerator property to **Foreach ADO Enumerator** and select the variable that contains the ADO object source.
- Add and edit a For Loop container.
- Open the Package Explorer tab.
- Set the enumerator property to **Foreach SMO Enumerator** and select the variable that contains the ADO object source.
- Add and edit a Foreach Loop container.
- Open the Control Flow designer of the package.

The actions are displayed in a list with a 'Select and Place' icon on the left. The interface also shows a central workspace with a vertical toolbar on the right containing navigation arrows.

Correct Answer:

Box 1: Open the Control Flow designer of the package.

Box 2: Add and edit a Foreach Loop container.

Box 3: Set the enumerator property to Foreach ADO Enumerator and select the variable that contains the ADO object source.

QUESTION 3

You are developing a SQL Server Integration Services (SSIS) project by using the Project Deployment Mode. The project will be deployed to an SSIS catalog folder where Environments have already been created.

You need to deploy the project.

- A. Use an event handler for OnError for the package.
- B. Use an event handler for OnError for each data flow task.
- C. Use an event handler for OnTaskFailed for the package.
- D. View the job history for the SQL Server Agent job.
- E. View the All Messages subsection of the All Executions report for the package.
- F. Store the System::SourceID variable in the custom log table.
- G. Store the System::ServerExecutionID variable in the custom log table.
- H. Store the System::ExecutionInstanceGUID variable in the custom log table.
- I. Enable the SSIS log provider for SQL Server for OnError in the package control flow.
- J. Enable the SSIS log provider for SQL Server for OnTaskFailed in the package control flow.
- K. Deploy the project by using dtutil.exe with the /COPY DTS option.
- L. Deploy the project by using dtutil.exe with the /COPY SQL option.

- M. Deploy the .ispac file by using the Integration Services Deployment Wizard.
- N. Create a SQL Server Agent job to execute the SSISDB.catalog.validate_project stored procedure.
- O. Create a SQL Server Agent job to execute the SSISDB.catalog.validate_package stored procedure.
- P. Create a SQL Server Agent job to execute the SSISDB.catalog.create_execution and SSISDB.catalog.*tart_execution stored procedures.
- Q. Create a table to store error information. Create an error output on each data flow destination that writes OnError event text to the table.
- R. Create a table to store error information. Create an error output on each data flow destination that writes OnTaskFailed event text to the table.

Correct Answer: M

QUESTION 4

You administer a Microsoft SQL Server 2012 database that has Trustworthy set to on. You create a stored procedure that returns database-level information from Dynamic Management Views.

You grant User1 access to execute the stored procedure.

You need to ensure that the stored procedure returns the required information when User1 executes the stored procedure. You need to achieve this goal by granting the minimum permissions required.

- A. Grant the db_datareader role on the database to User1.
- B. Modify the stored procedure to include the EXECUTE AS OWNER statement. Grant VIEW SERVER STATE permissions to the owner of the stored procedure.
- C. Create a SQL Server login that has VIEW SERVER STATE permissions. Modify the stored procedure to include the EXECUTE AS {newlogin} statement.
- D. Move the stored procedure to the User1 schema.
- E. Grant the VIEW SERVER STATE permission to User1.

Correct Answer: BC

QUESTION 5

You are creating a Data Quality Services (DQS) solution. You must provide statistics on the accuracy of the data.

You need to use DQS profiling to obtain the required statistics.

Which DQS activity should you use?

- A. Cleansing
- B. Knowledge Discovery

C. Matching Policy

D. Matching

Correct Answer: A
