QUESTION 1

minimize the amount of development effort required. What should you add to usp_SelectEmployeesByName?

- A. An OFFSET-FETCH clause
- B. A recursive common table expression
- C. A table variable
- D. The ROWNUMBER keyword

Correct Answer: A

QUESTION 2

You need to recommend a solution to improve the performance of usp_UpdateInventory. The solution must minimize the amount of development effort. What should you include in the recommendation?

- A. a table variable
- B. a subquery
- C. a common table expression
- D. a cursor

Correct Answer: C

QUESTION 3

You have a table named ORDERS that contains 10,514,003 Orders. The ORDERS table has an IDENTITY (1,1) column named ORDERID. ORDERID is the UNIQUE CLUSTERED INDEX and PRIMARY KEY for the table. The first

ORDERID is 1. There are no missing ORDERIDs in the set.

Based on table usage patterns, you decide to use partitioning on this table based off of the ORDERID column.

You need to create the following partitions:

Partition	Values
1	Orders <= 7,500,000
2	Orders > 7,500,000 and <= 10,000,000
3	Orders > 10,000,000

Which code should you use to create the partition function?

- A. `CREATE PARTITION FUNCTION pfOrderIDRange (int) AS RANGE LEFT FOR VALUES (7500000,10000000)`
- B. `CREATE PARTITION FUNCTION pfOrderIDRange (int) AS RANGE LEFT FOR VALUES (0,7500000,10000000)`
- C. `CREATE PARTITION FUNCTION pfOrderIDRange (int) AS RANGE RIGHT FOR VALUES (7500000,10000000)`
- D. `CREATE PARTITION FUNCTION pfOrderIDRange (int) AS RANGE RIGHT FOR VALUES (0,7500000,10000000)`

A. B. C. D.

Correct Answer: A

QUESTION 4

You plan to install two SQL Server 2012 environments named Environment1 and Environment2. Your company identifies the following availability requirements for each environment:

Environment1 must have mirroring with automatic failover implemented.

Environment2 must have AlwaysOn with automatic failover implemented. You need to identify the minimum number of SQL Server 2012 servers that must be deployed to each environment to ensure that all data remains available if a physical server fails. How many servers should you identify? To answer, drag the appropriate number to the correct environment in the answer area.

Select and Place:

Number of Servers	Answer Area
<input type="button" value="2"/> <input type="button" value="3"/> <input type="button" value="4"/>	Environment1 <input type="text" value="#"/> Environment2 <input type="text" value="#"/>

www.GeekCert.com

Correct Answer:

Number of Servers	Answer Area
<input type="text"/> <input type="text"/> <input type="text" value="4"/>	Environment1 <input type="text" value="3"/>
	Environment2 <input type="text" value="2"/>

QUESTION 5

You need to implement changes to the system to reduce contention and improve performance of the SalesOrderDetail table.

Which three actions should you perform? Each correct answer presents part of the solution. Choose three.

- A. Use (SNAPSHOT) hints in the report queries
- B. ALTER DATABASE [ProdDB] SET READ_COMMITTED_SNAPSHOT ON
- C. ALTER DATABASE [ProdDB] SET READ_COMMITTED_SNAPSHOT OFF
- D. SET TRANSACTION ISOLATION LEVEL SNAPSHOT
- E. Use (TABLOCK) hints in the report queries
- F. SET TRANSACTION ISOLATION LEVEL SERIALIZABLE
- G. ALTER DATABASE [ProdDB] SET ALLOW_SNAPSHOT ISOLATION ON
- H. Use (SNAPSHOT) hints in the update statements

Correct Answer: ABF

*

Scenario:

The SalesOrderDetail table holds the details about each sale. It is in the Sales schema owned by the SalesStaff Windows group.

This table is constantly being updated, inserted into, and read.

*

Regardless of which office runs a sales force report, the SalesOrderDetail table should only return valid, committed order data; any orders not yet committed should be ignored.

*

READ_COMMITTED_SNAPSHOT { ON | OFF }

ON

Enables Read-Committed Snapshot option at the database level. When it is enabled, DML statements start generating row versions even when no transaction uses Snapshot Isolation. Once this option is enabled, the transactions specifying

the read committed isolation level use row versioning instead of locking. When a transaction runs at the read committed isolation level, all statements see a snapshot of data as it exists at the start of the statement.

OFF

Turns off Read-Committed Snapshot option at the database level. Transactions specifying the READ

COMMITTED isolation level use locking.
