QUESTION 1

You develop a SQL Server Integration Services (SSIS) package that imports SQL Azure data into a data warehouse every night.

The SQL Azure data contains many misspellings and variations of abbreviations. To import the data, a developer used the Fuzzy Lookup transformation to choose the closest-matching string from a reference table of allowed values. The

number of rows in the reference table is very large.

If no acceptable match is found, the Fuzzy Lookup transformation passes a null value.

The current setting for the Fuzzy Lookup similarity threshold is 0.50.

Many values are incorrectly matched.

You need to ensure that more accurate matches are made by the Fuzzy Lookup transformation without degrading performance.

What should you do?

A. Decrease the maximum number of matches per lookup.

B. Change the similarity threshold to 0.55.

C. Change the Exhaustive property to True.

D. Increase the maximum number of matches per lookup.

Correct Answer: B

QUESTION 2

You are reviewing the design of a customer dimension table in an existing data warehouse hosted on SQL Azure.

The current dimension design does not allow the retention of historical changes to customer attributes such as Postcode.

You need to redesign the dimension to enable the full historical reporting of changes to multiple customer attributes including Postcode.

What should you do?

A. Add StartDate and EndDate columns to the customer dimension.

B. Add an IsCurrent column to the customer dimension.

C. Enable Snapshot Isolation on the data warehouse.

D. Add CurrentValue and PreviousValue columns to the customer dimension.

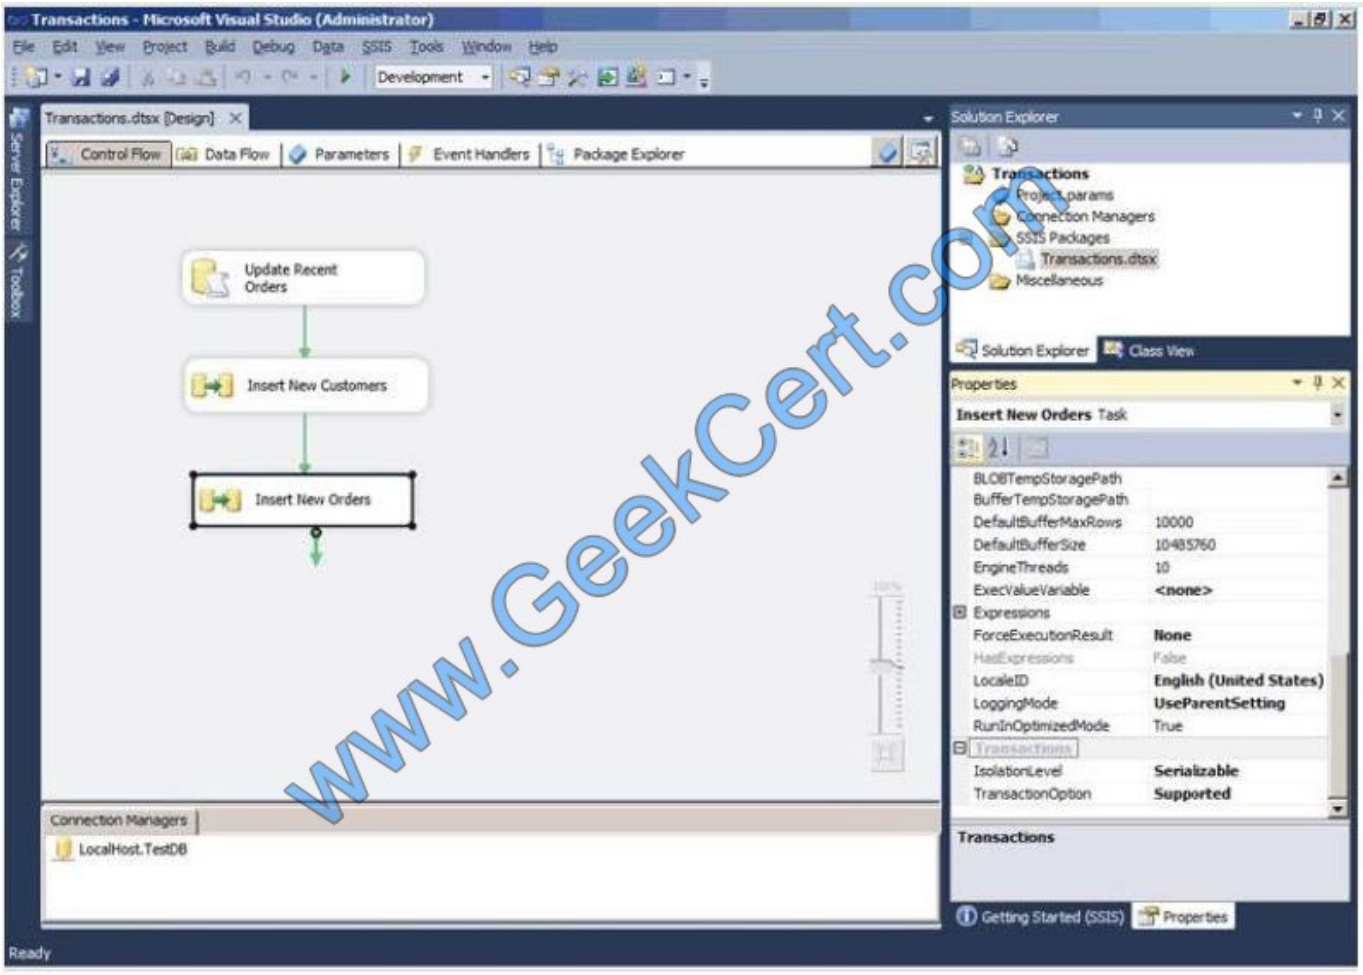
Correct Answer: A

Adding a start and end date will give you this ability as when a record is inserted and given a start and end date, you\\'ll have the ability to determine when they were active therefore giving you a retention of historical changes

QUESTION 3

You are designing a package control flow. The package moves sales order data from a SQL Azure transactional database to an on-premise reporting database. The package will run several times a day, while new sales orders are being added to the transactional database.

The current design of the package control flow is shown in the answer area.



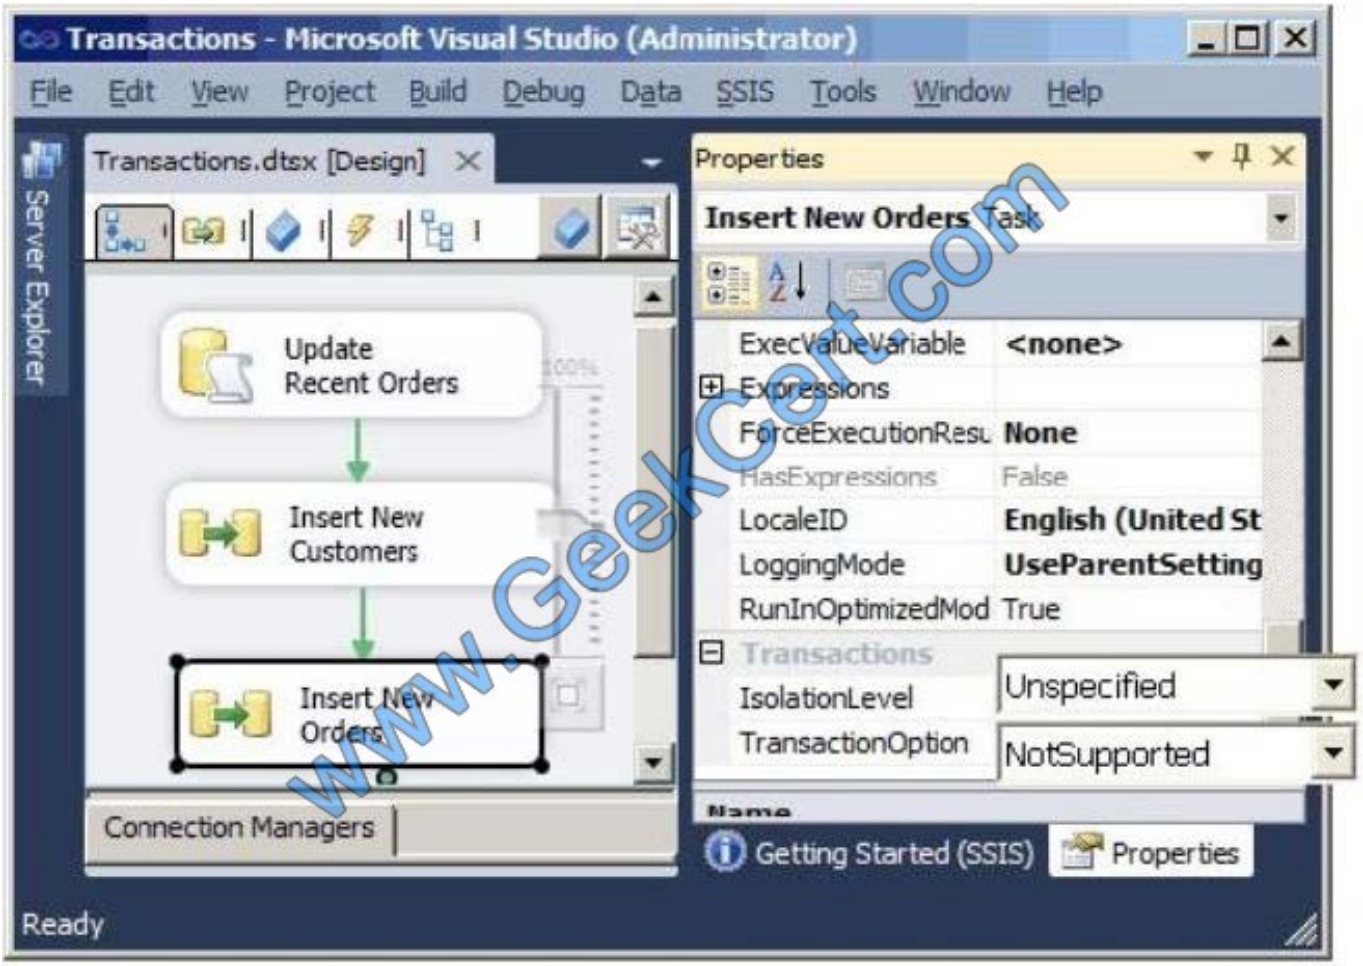
The Insert New Orders Data Flow task must meet the following requirements:

Usage of the tempdb database should not be impacted.

Concurrency should be maximized, while only reading committed transactions.

If the task fails, only that task needs to be rolled back.

You need to configure the Insert New Orders Data Flow task to meet the requirements.



How should you configure the transaction properties?

Correct Answer: IsolationLevel = ReadCommited TransactionOption = Required

QUESTION 4

You are developing a SQL Server Integration Services (SSIS) package.

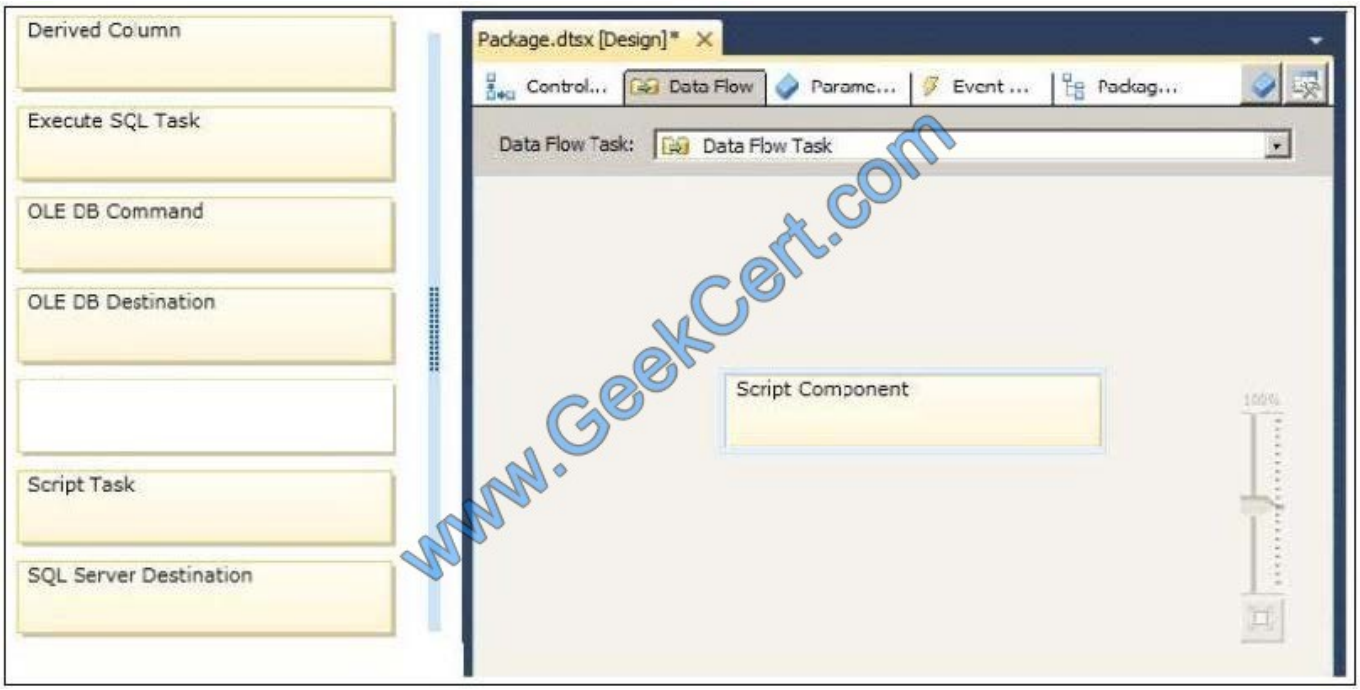
The package uses custom functionality that accesses a SQL Server database. The custom functionality must be implemented by using Language Integrated Query (LINQ).

You need to ensure that the LINQ code can be debugged at design time.

What should you select from the SSIS Toolbox? (To answer, drag the appropriate item to the correct location in the answer area.)

Select and Place:

Correct Answer:



QUESTION 5

You are developing a SQL Server Integration Services (SSIS) package. The package sources data from an HTML web page that lists product stock levels.

You need to implement a data flow task that reads the product stock levels from the HTML web page.

What should you do?

A. Use an msi file to deploy the package on the server.

B. Open a command prompt and run the dtutil/copy command.

C. Add an OnError event handler to the SSIS project.

D. Open a command prompt and run the gacutil command.

Correct Answer: B
