QUESTION 1

You are designing a partitioning strategy for a large fact table in a Manufacturing data warehouse.

Tens of millions of new inventory fact records are loaded into the data warehouse weekly, outside of business hours. Most queries against the database are generated by reports and by cube processing. Data is frequently queried at the day

level and occasionally at the month level.

- A. Partition the inventory fact table by year.
- B. Partition the inventory fact table by week.
- C. Partition the inventory fact table by day, and compress each partition.
- D. Partition the inventory fact table by month, and compress each partition.

Correct Answer: C

QUESTION 2

You are designing a self-service reporting solution based on published PowerPivot workbooks.

The reporting solution must allow users to perform the following tasks:

Easily create reports.

Create report queries by dragging and dropping fields. Create presentation-quality reports with minimal effort.

You need to choose a reporting tool that meets the requirements.

Which reporting tool should you choose(More than one answer choice may achieve the goal. Select the BEST answer.)

- A. Report Builder
- B. Report Designer
- C. Power View
- D. Microsoft Excel

Correct Answer: C

QUESTION 3

DRAG DROP

You are designing a SQL Server Reporting Services (SSRS) solution.

A report project must access multiple SQL Azure databases. Each database is on a different host. The databases have identical schema and security configurations.

You have the following requirements:

The report must support subscriptions.

Users must be able to select the host when running the report.

What should you do?

To answer, drag the appropriate phrase or phrases from the list to the correct location or locations in the answer area. (Answer choices may be used once, more than once, or not all.)

Select and Place:

SQL Azure data.	Create a
SQL Azure hosts.	Create a report parameter that displays available
a shared dataset.	values of
stored credentials.	Create
integrated security.	Configure the data source to use
data source in the report.	George
an expression-based connection string.	G
shared data source in the report	
Correct Answer:	
SQL Azure data.	Create a data source in the report.
	Create a report parameter that displays available
a shared dataset.	values of SQL Azure hosts.

an expression-based connection string.

Configure the data source to use stored credentials.

Note:

integrated security.

shared data source in the report

*

To include data in a report, you must first createdata connections, also known asdata sources, and then create datasets.

A data connection includes the data source type, connection information, and the type of credentials to use. There are

VCE & PDF GeekCert.com

https://www.geekcert.com/70-467.html 2022 Latest geekcert 70-467 PDF and VCE dumps Download

two types of data sources: embedded and shared. An embedded data source is defined in the report and used only by that report (fits this scenario). A shared data source is defined independently from a report and can be used by multiple reports.

*

Built-in data extensions include the following data connection types: Microsoft SQL Server Microsoft SQL Server Analysis Services Microsoft SharePoint List Windows Azure SQL Database Etc.

*

Expression-based connection strings are evaluated at run time. For example, you can specify the data source as a parameter, include the parameter reference in the connection string, and allow the user to choose a data source for the report.

*

Credentials You provide the credentials that are needed to access the data. The data source owner must have granted you the appropriate permissions to access both the data source and the specific data on the data source. Reference: Data Connections, Data Sources, and Connection Strings (SSRS)

QUESTION 4

You need to ensure that the corporate logos appear in reports. What should you do?

- A. In SharePoint Central Administration, configure the unattended execution account.
- B. In SharePoint Central Administration, configure the Report Server service account.
- C. In Reporting Services Configuration Manager, configure the unattended execution account.
- D. In Reporting Services Configuration Manager, configure the Report Server service account.

Correct Answer: A

QUESTION 5

The Sales database includes a table named Products that contains 42 columns, and two tables that record all product sales transactions. The database does not store aggregated data. The database is continually maintained to provide

optimal indexing. The database server is sized appropriately.

The Marketing department requests a delimited text file that includes seven fields containing product information from the Products table.

You have the following requirements:

Display the ProductID in the first column. Organize the remaining columns alphabetically by column heading.

Sort rows in ProductID order.

https://www.geekcert.com/70-467.html 2022 Latest geekcert 70-467 PDF and VCE dumps Download

Aggregate product units sold.

Minimize the time required to return the results.

You create a SQL Server Integration Services (SSIS) package and add the appropriate connection managers and a Data Flow task.

You need to develop the Data Flow task.

What should you add to the Data Flow task(More than one answer choice may achieve the goal. Select the BEST answer.)

- A. A table-based OLE DB source; a Script component; and a Flat File destination.
- B. Only a SQL command-based OLE DB source and a Flat File destination.
- C. A table-based OLE DB source; Lookup, Aggregate, and Sort transformations; and a Flat File destination.
- D. A SQL command-based OLE DB source; Aggregate and Sort transformations; and a Flat File destination.

Correct Answer: D
