QUESTION 1

DRAG DROP

You are validating whether a SQL Server Integration Services (SSIS) package named Master.dtsx in the SSIS catalog is executing correctly.

You need to display the number of rows in each buffer passed between each data flow component of the package.

Which three actions should you perform in sequence (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

- Execute a SQL statement with a package name of Master.dtsx against the **catalog.executions** view and return its execution ID.
- Run the Master.dtsx package with the logging level set to **Basic**.
- Execute a SQL statement with the execution ID equal to the previously retrieved execution ID against the **catalog.execution_data_statistics** view and return the **rows_sent** column values for all the rows.
- Run the Master.dtsx package with the logging level set to **Verbose**.
- Execute a SQL statement with a package name of Master.dtsx against the **catalog.event_messages** view and return its execution ID.

Correct Answer:

-
-
-
- Run the Master.dtsx package with the logging level set to **Verbose**.
- Execute a SQL statement with a package name of Master.dtsx against the **catalog.event_messages** view and return its execution ID.

- Execute a SQL statement with a package name of Master.dtsx against the **catalog.executions** view and return its execution ID.
- Run the Master.dtsx package with the logging level set to **Basic**.
- Execute a SQL statement with the execution ID equal to the previously retrieved execution ID against the **catalog.execution_data_statistics** view and return the **rows_sent** column values for all the rows.

Note:

* You are going to become very very familiar indeed with [catalog].[executions]. It is a view that provides a record of all package executions on the server and, most importantly, it contains [execution_id] – the identifier for each execution and the field to which all other objects herein will be related.

QUESTION 2

Your network contains the following components:

Microsoft SharePoint Server 2010

SQL Server 2008 Service Pack 2 (SP2)

SQL Server 2008 Service Pack 1 (SP1) in Reporting Services Native Mode

You need to recommend a solution to upgrade the network to SQL Server 2014.

The solution must meet the following requirements:

Minimize the amount of time that SharePoint services are unavailable. Deploy the upgraded Reporting Services instance in Reporting Services SharePoint Integrated Mode.

You upgrade the Database Engine to SQL Server 2014.

Which three actions should you recommend performing next? Each correct answer presents part of the solution.

- A. Install a SQL Server 2014 Reporting Services add-in for SharePoint on all of the front-end Web servers that have SharePoint Server installed.
- B. Perform an in-place upgrade to SQL Server Reporting Services (SSRS) 2014.
- C. Perform a SharePoint 2013 side-by-side upgrade.
- D. Perform a SharePoint 2013 in-place upgrade.
- E. Migrate legacy reports and application data.
- F. Install a new instance of SQL Server Reporting Services (SSRS) 2014.

Correct Answer: AEF

QUESTION 3

You need to update the Execute SQL task in the OnVariableValueChanged event handler of all SSIS packages. Which additional variable should be logged?

- A. System::ExecutionInstanceGUID

B. System::ServerExecutionID

C. System::VariableID

D. System::SourceID

Correct Answer: C

QUESTION 4

You are designing a SQL Server Integration Services (SSIS) solution. The solution will contain an SSIS project that includes several SSIS packages. Each SSIS package will define the same connection managers and variables.

You have the following requirements:

Ensure that the deployment model supports changing the content of connection strings by using parameters at execution time.

Ensure that the deployment model automatically starts from calls to the catalog.start_execution stored procedure in the SSISDB database.

Maximize performance at execution time.

Minimize development effort.

You need to design a solution that meets the requirements.

What should you do?(More than one answer choice may achieve the goal. Select the BEST answer.)

A. Use a project deployment model. Modify connection manager properties to use project parameters. Ensure that the SSISDB database is created.

B. Use a project deployment model. Configure connections in an XML configuration file referenced by an environment variable that corresponds to the SQL Server environment of each SSIS package.

C. Use a package deployment model. Use a SQL Server package configuration with a common filter. Change the contents of the SSIS Configurations table at runtime.

D. Use a package deployment model. Save each SSIS package to a file share that can be accessed from all environments.

Correct Answer: A

QUESTION 5

You need to implement a strategy for efficiently storing sales order data in the data warehouse. What should you do?

A. Separate the factOrders table into multiple tables, one for each month that has orders, and use a local partitioned view.

- B. Separate the factOrders table into multiple tables, one for each day that has orders, and use a local partitioned view.
- C. Create daily partitions in the factOrders table.
- D. Create monthly partitions in the factOrders table.

Correct Answer: C
