QUESTION 1

A company maintains separate environments for test, production, and quality assurance.

The company uses the project deployment model for SQL Server Integration Services (SSIS) deployments.

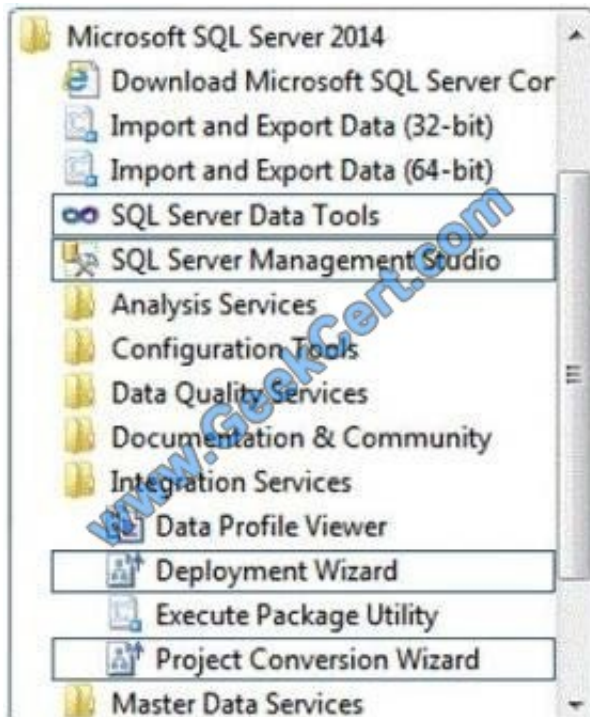

You create an SSIS project to perform a weekly refresh of the company's data warehouse and cubes. The project has three packages.

You need to configure the project to ensure so that the test and production teams can run each package without manually adding server-specific information.

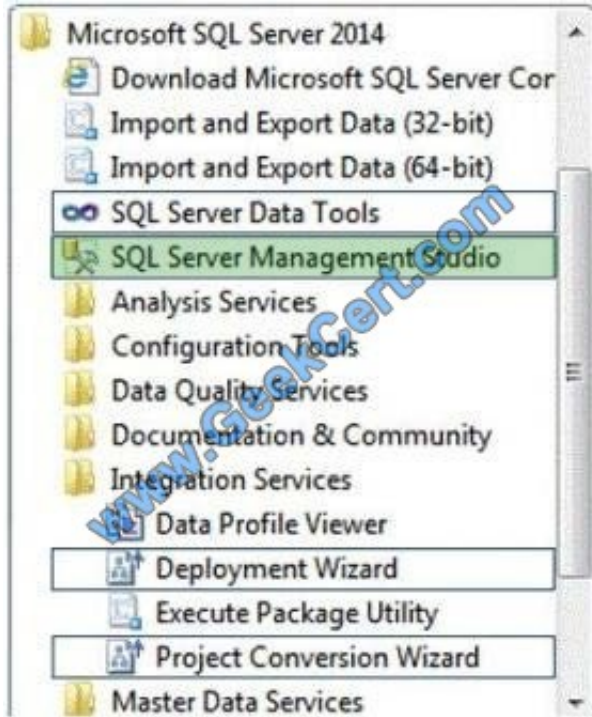

Which program should you use?

To answer, select the appropriate program in the answer area.

Hot Area:

Correct Answer:

QUESTION 2

You are developing a SQL Server Analysis Services (SSAS) tabular project. The model has tables named Invoice Line Items and Products.

The Invoice Line Items table has the following columns:

Product Id

Unit Sales Price

The Unit Sales Price column stores the unit price of the product sold. The Products table has the following columns:

Product Id

Minimum Sales Price

The Minimum Sales Price column is available only in the Products table.

You add a column named Is Undersell to the Invoice Line Items table. The Is Undersell column must store a value of TRUE if the value of the Unit Sales Price is less than the value of the Minimum Sales Price. Otherwise, a value of FALSE

must be stored.

You need to define the Data Analysis Expressions (DAX) expression for the Is Undersell column.

Which DAX formula should you use? (Each answer represents a complete solution.

Choose all that apply.)

- A. =IF([Unit Sales Price]
- B. =IF(RELATED(Products[Unit Sales Price])
- C. =IF([Unit Sales Price]
- D. =IF(LOOKUPVALUE(Products[Unit Sales Price], Products[Product Id], [Product Id])

Correct Answer: AC

Explanation: A: RELATED Function Returns a related value from another table.

* The RELATED function requires that a relationship exists between the current table and the table with related information. You specify the column that contains the data that you want, and the function follows an existing many-to-one

relationship to fetch the value from the specified column in the related table.

C:

The lookupvalue function returns the value in result_columnName for the row that meets all criteria specified by search_columnName and search_value.

Syntax:

LOOKUPVALUE(, , [, ,]...)

Note:

The syntax of DAX formulas is very similar to that of Excel formulas, and uses a combination of functions, operators, and values.

QUESTION 3

You are creating a SQL Server Integration Services (SSIS) package to populate a fact table from a source table. The fact table and source table are located in a SQL Azure database. The source table has a price field and a tax field. The OLE DB source uses the data access mode of Table.

You have the following requirements: The fact table must populate a column named TotalCost that computes the sum of the price and tax columns. Before the sum is calculated, any records that have a price of zero must be discarded.

You need to create the SSIS package in SQL Server Data Tools.

In what sequence should you order four of the listed components for the data flow task? (To answer, move the appropriate components from the list of components to the answer area and arrange them in the correct order.)

Select and Place:

- Conditional Split
- Data Conversion
- OLE DB Destination
- Multicast
- Derived Column
- Copy Column
- Data Profiling Task
- OLE DB Source

www.GeekCert.com

Correct Answer:

-
- Data Conversion
-
- Multicast
-
- Copy Column
- Data Profiling Task
-

- OLE DB Source
- Conditional Split
- Derived Column
- OLE DB Destination

QUESTION 4

You need to develop an SSRS report that retrieves currency exchange rate data. How should you configure the data source for the report?

- A. Use the Windows Azure SQL Database data source type and then set Windows authentication for the credentials.
- B. Use the Windows Azure SQL Database data source type and then set a username and password for the credentials.
- C. Use the SQL Server data source type and then set a username and password for the credentials.
- D. Use the SQL Server data source type and then set Windows authentication for the credentials.

Correct Answer: B

QUESTION 5

You are developing a SQL Server Reporting Services (SSRS) report. The report includes a dataset with fields named Year, MonthNumber, and InvCount. The report includes a table that displays the inventory count per year, as shown in the following diagram.

Inv Count

Year	Inv Count
1995	46,043
1996	45,741
1997	45,765
1998	45,848
1999	47,193
2000	48,456
2001	48,412
2002	47,902
2003	48,049
2004	48,442
2005	48,519
2006	48,837
2007	49,074
2008	48,981
2009	49,251
2010	49,407
2011	49,545

You need to modify the table to include a graphical item displaying the inventory count trend to the right of the Inv Count column.

What should you do?

- A. Add an Indicator item to a new column on the right of the Inv Count column. Select the Directional Indicator type and then select the MonthNumber field for Value.
- B. Add a Sparkline item to a new column on the right of the Inv Count column. Then select the InvCount field for Values and the MonthNumber field for Category Groups.
- C. Add an Indicator item to a new column on the right of the Inv Count column. Select the Directional Indicator type and then assign the MonthNumber field to the Start property.
- D. Add a Sparkline item to a new column on the right of the Inv Count column. Then select the InvCount field for Values and the MonthNumber field for Series Groups.
- E. Add a text box to a new column on the right of the Inv Count column. Then use a Go to report action to link to a separate report showing the monthly trend.

Correct Answer: B
