QUESTION 1

You are working with a SQL Server Reporting Services (SSRS) instance in native mode. An item role named Reports Writer is present on the server.

The Reports Writer role cannot view and modify report caching parameters.

You need to ensure that the Reports Writer role can view and modify report caching parameters.

What should you do?

A. Add the Manage individual subscriptions task to the Reports Writer role.

B. Add the Manage report history task to the Reports Writer role.

C. Add the View data sources task to the Reports Writer role.

D. Add the Manage all subscriptions task to the Reports Writer role.

Correct Answer: B

QUESTION 2

You need to identify changes in the financial database. What should you do?

A. Add SQL Server log shipping to each table.

B. Add SQL Server mirroring to each table.

C. Perform a full extract of each table.

D. Enable change data capture on each table.

E. Create an AlwaysOn Availability Group that includes all the tables.

Correct Answer: D

QUESTION 3

You need to configure the partition storage settings to support the reporting requirements. Which partition storage setting should you use?

A. DirectQuery

B. In-Memory

C. MOLAP

D. Low-latency MOLAP

E. Scheduled MOLAP

F. High-latency MOLAP

Correct Answer: D

QUESTION 4

You are designing an extract, transform, load (ETL) process for loading data from a SQL Server database into a large fact table in a data warehouse each day with the prior day\\'s sales data.

The ETL process for the fact table must meet the following requirements:

Load new data in the shortest possible time.

Remove data that is more than 36 months old.

Ensure that data loads correctly.

Minimize record locking.

Minimize impact on the transaction log.

You need to design an ETL process that meets the requirements.

What should you do? (More than one answer choice may achieve the goal. Select the BEST answer.)

A. Partition the destination fact table by date. Insert new data directly into the fact table and delete old data directly from the fact table.

B. Partition the destination fact table by date. Use partition switching and staging tables both to remove old data and to load new data.

C. Partition the destination fact table by customer. Use partition switching both to remove old data and to load new data into each partition.

D. Partition the destination fact table by date. Use partition switching and a staging table to remove old data. Insert new data directly into the fact table.

Correct Answer: B

QUESTION 5

You are developing a SQL Server Analysis Services (SSAS) cube for the sales department at your company. The sales department requires the following set of metrics:

Unique count of customers

Unique count of products sold

Sum of sales

You need to ensure that the cube meets the requirements while optimizing query response time.

What should you do? (Each answer presents a complete solution. Choose all that apply.)

A. Place the measures in a single measure group.

B. Place the distinct count measures in separate measure groups.

C. Use the additive measure group functions.

D. Use the semiadditive measure group functions.

E. Use the Count and Sum measure aggregation functions.

F. Use the Distinct Count and Sum measure aggregation functions.

Correct Answer: BD

Explanation: B: Typically, the best performance occurs when each distinct count measure is in its own measure group, and that measure group has the same dimensionality as the initial measure group.

D: Semiadditive Function

Select the aggregation function for the selected measure. The aggregate functions available include DistinctCount, Aggregated using the DistinctCount function.
