QUESTION 1

You have Microsoft SQL Server 2014 installed on a Microsoft Azure virtual machine.

One of the databases on the virtual machine supports a highly active Online Transaction Processing (OLTP) application. Users report abnormally long wait times when they submit data in the application.

Which two tools can you use to identify the longest running queries? Each correct answer presents a complete solution.

- A. the Job Activity Monitor
- B. Database Engine Tuning Advisor
- C. dynamic management views
- D. SQL Server Extended Events
- E. SQL metrics in Azure Diagnostics for the virtual machine

Correct Answer: CD

QUESTION 2

You have an application named App1. App1 is distributed to multiple Hyper-V virtual machines in a multitenant environment.

You need to ensure that the traffic is distributed evenly among the virtual machines that host App1.

What should you include in the environment?

- A. Network Controller and Windows Server Software Load Balancing (SLB) nodes
- B. an RAS Gateway and Windows Server Software Load Balancing (SLB) nodes
- C. an RAS Gateway and Windows Server Network Load Balancing (NLB) nodes
- D. Network Controller and Windows Server Network Load Balancing (NLB) nodes

Correct Answer: A

QUESTION 3

HOTSPOT

You have a server named Server1 that runs Windows Server 2016. Server1 has the Web Application Proxy role service installed.

You publish an application named App1 by using the Web Application Proxy.

You need to change the URL that users use to connect to App1 when they work remotely.

Which command should you run? To answer, select the appropriate options in the answer area.

Hot Area:

Answer Area

Correct Answer:

Answer Area

The Set-WebApplicationProxyApplication cmdlet modifies settings of a web application published through Web Application Proxy. Specify the web application to modify by using its ID. Note that the method of preauthentication cannot be changed. The cmdlet ensures that no other applications are already configured to use any specified ExternalURL or BackendServerURL.

QUESTION 4

Your network contains an Active Directory domain named contoso.com that contains a domain controller named DC1. All DNS servers for the network run BIND 10.

Your perimeter network contains a DHCP server named DHCP1 that runs Windows Server 2016. DHCP1 is a member

of a workgroup named WORKGROUP. DHCP1 provides IP address leases to guests accessing the Wi-Fi network.

Several engineers access the network remotely by using a VPN connection to remote access server that runs Windows Server 2016. All of the VPN connections use certificate-based authentication and are subjects to access policies in

Network Policy Server (NPS). Certificates are issued by an enterprise certification authority (CA) named CA1.

All Windows computers on the network are activated by using Key Management Service (KMS). On-premises users use Remote Desktop Services (RDS).

You plan to deploy IP Address Management (IPAM) to the network.

Which action can you perform on the network by using IPAM?

- A. Audit authentication events from DC1.
- B. Create DHCP reservations on DHCP1.
- C. Audit certificate enrollment requests on CA1.
- D. Manage activations on the KMS server.

Correct Answer: A

QUESTION 5

You have a failover cluster deployed to Microsoft Azure virtual machines.

You plan to deploy a new Microsoft SQL instance to the cluster. The instance will host one database that has 10 file groups.

You provision 10 disks for the instance.

You need to recommend a storage solution that always provides the fastest possible reads for the database.

What should you include in the recommendation?

- A. Dynamic disks that use striping
- B. One file group per disk
- C. A Storage space
- D. Dynamic disks that use mirroring

Correct Answer: A

Dynamic disks provide features that basic disks do not, such as the ability to create volumes that span multiple disks (spanned and striped volumes) and the ability to create fault-tolerant volumes (mirrored and RAID-5 volumes). Disk striping can speed up operations that retrieve data from disk storage.
