QUESTION 1

You have a failover cluster named Cluster1.

A virtual machine named VM1 is a highly available virtual machine that runs on Cluster1. A custom application named App1 runs on VM1.

You need to configure monitoring on VM1. If App1 adds an error entry to the Application event log, VM1 should be automatically rebooted and moved to another cluster node.

Which tool should you use?

- A. Resource Monitor
- B. Failover Cluster Manager
- C. Server Manager
- D. Hyper-V Manager

Correct Answer: B

Do you have a large number of virtualized workloads in your cluster? Have you been looking for a solution that allows you to detect if any of the virtualized workloads in your cluster are behaving abnormally? Would you like the cluster service to take recovery actions when these workloads are in an unhealthy state? In Windows Server 2012/2016, there is a great new feature, in Failover Clustering called "VM Monitoring", which does exactly that ?it allows you monitor the health state of applications that are running within a virtual machine and then reports that to the host level so that it can take recovery actions.

VM Monitoring can be easily configured using the Failover Cluster Manager through the following steps:

QUESTION 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some questions sets might have more than one correct solutions, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a server named Server1 that runs Windows Server 2016. Server1 is configured as a VPN server.

Server1 is configured to allow domain users to establish VPN connections from 06:00 to

18:00

everyday of the week.

You need to ensure that domain users can establish VPN connections only between Monday and Friday.

Solution: From Network Policy Server, You modify the Network Policies on Server1.

Does this meet the goal?

- A.
Yes
- B.
No

Correct Answer: A

QUESTION 3

DRAG DROP

You have a file server named Server1 that runs Windows Server 2016.

You need to create a report that lists all of the sharp permissions assigned to the security principals on Server1.

How should you complete the command? To answer, drag the appropriate cmdlets to the correct targets. Each cmdlet may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view

content.

Select and Place:

Cmdlets	Answer Area
Get-Acl	Cmdlet
Get-SmbDelegation	Cmdlet
Set-SmbPathAcl	
Get-Credential	
Get-SmbShare	
Get-SmbClientConfiguration	
Get-SmbShareAccess

Correct Answer:

Answer Area

Cmdlets

- Get-Acl
- Get-SmbDelegation
- Set-SmbPathAcl
- Get-Credential
-
-
- Get-SmbShareAccess

- Get-SmbShare
- Get-SmbClientConfiguration

QUESTION 4

You have four Microsoft Azure SQL databases. You need to configure cross-database queries. Which four statements should you use in sequence? To answer, move the appropriate statements from the list of statements to the answer area and arrange them in the correct order.

Select and Place:

Correct Answer: A

Best practices include enabling read caching on the disk(s) hosting the data files and TempDB data files.
