QUESTION 1

You are developing a Windows Store app for geocaching competitions that displays location-aware tips.

You need to capture device location events periodically to determine if a tip should be displayed.

What should you do? (Each correct answer presents part of the solution. Choose all that apply.)

- A. Enable the Proximity capability in the Package.appxmanifest file.
- B. Create an instance of the `Windows.Devices.Sensors.OrientationSensor` class. Use the `ReportInterval` property to set the interval for getting the position data. Then attach an event handler to the `PositionChanged` event to capture position and decide if tips should be shown.
- C. Create an instance of the `Windows.Devices.Sensors.Gps` class. Use the `ReportInterval` property to set the interval for getting the position data. Then attach an event handler to the `PositionChanged` event to capture position and decide if tips should be shown.
- D. Enable the Location capability in the Package.appxmanifest file.
- E. Create an instance of the `Windows.Devices.Geolocation.Geolocator` class, Use the `ReportInterval` property to set the interval for getting the position data. Then attach an event handler to the `PositionChanged` event to capture position and decide if tips should be shown.

Correct Answer: DE

QUESTION 2

You create the following method in a Utility class: (Line numbers are included for reference only.)

```
01 using Windows.Storage.AccessCache;  
02 static void StoreMostViewed(StorageFile file)  
03 {  
04  
05 }
```

You need to complete the code to meet the requirement for displaying the last 10 viewed pictures.

What code should you add to line 04? (More than one answer choice may achieve the goal. Select the BEST answer.)

- A. `StorageApplicationPermissions.FutureAccessList.Add(file, file.Name);`
- B. `StorageApplicationPermissions.MostlyRecentlyUsedList.Add(file, file.Name);`
- C. `StorageItemMostRecentlyUsedList.Entries.Add(file, file.Name);`
- D. `StorageItemAccessList.Entries.Add(file, file.Name);`

Correct Answer: A

QUESTION 3

You need to ascertain whether the device that the app is running on has a compass.

Which line of code should you insert at line CE43?

- A. `while(Windows.Devices.Sensors == Compass)`
- B. `if (Compass.GetDefault() != null)`
- C. `if (Compass.GetDefault() == Compass.FirstOrDefault)`
- D. `if(Compass.GetCurrentReading() != null)`

Correct Answer: B

QUESTION 4

You need to reference the reusable WinMD project.

What should you do?

- A. Run the `Gacutil.exe /I shared.dll` command.
- B. In `GooseTracker.csproj` add the following code immediately after line GO02.

```
<Extension Include="..\LogicComponent1\LogicComponent1.csproj">  
  <Project>{b64bd7c9-fbdc-4b80-8350-8fead0878721}</Project>  
  <Name> GooseLogic</Name>  
</Extension>
```

- C. In `GooseTracker.csproj`, add the following code at line GO04.

```
<ProjectReference Include="..\LogicComponent1\LogicComponent1.csproj">  
  <Project>{b64bd7c9-fbdc-4b80-8350-8fead0878721}</Project>  
  <Name>GooseLogic</Name>  
</ProjectReference>
```

- D. In the `MainPage.xaml.cs` file, register the handler for the extension/mime-type

- A. Option A
- B. Option B
- C. Option C
- D. Option D

Correct Answer: C

QUESTION 5

You are developing a Windows Store app that uploads large files to the Internet by using background tasks.

uploadTask is an instance of the IBackgroundTask interface that provides access to a background task instance. UploadFilesAsync() is the asynchronous method that performs the upload.

You need to ensure that the app performs the upload operation asynchronously in a background task.

Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

Answer Area

- Call the **UploadFilesAsync()** method by using the **async** operator.
- Create the deferral by requesting it from the **uploadTask** instance.
- Invoke the **Complete()** method on the deferral.
- Call the **UploadFilesAsync()** method by using the **await** operator.
- Invoke the **Run()** method on the deferral.
- Invoke the **Begin()** method on the deferral.

Correct Answer:

	Answer Area
Call the UploadFilesAsync() method by using the async operator.	Create the deferral by requesting it from the uploadTask instance.
	Call the UploadFilesAsync() method by using the await operator.
	Invoke the Complete() method on the deferral.
Invoke the Run() method on the deferral.	
Invoke the Begin() method on the deferral.
