QUESTION 1

You develop a web application locally in Microsoft Visual Studio. You use the App Service Kudu deployment engine.

Changes to the online repository are not automatically reflected in the web application.

You need to ensure that changes to the application will be deployed automatically.

What should you do?

- A. Create a .gitignore file and remove tracking from the ignored files.
- B. Remove the .sin file from the online repository.
- C. Create a new Git origin for the project.
- D. Set up continuous deployment options in VSTS to match the options in Microsoft Azure App Services.

Correct Answer: D

<https://docs.microsoft.com/en-us/azure/app-service/app-service-continuous-deployment>

QUESTION 2

You need to implement client-side animations according to the business requirements.

Which line of code should you use? (Each correct answer presents a complete solution. Choose all that apply.)

- A. `$("#body h1:nth-child(1)).fadeIn(1000);`
- B. `$("#body h1:nth-child(1))-fadeOut(1000);`
- C. `$("#body h2:nth-child(1)).animate({ opacity: 0 });`
- D. `$("#body h1:nth-child(1)).animate({ opacity: 1 });`

Correct Answer: BC

QUESTION 3

You need to implement the business requirements for managing customer data.

What should you do? Each correct answer presents part of the solution. Choose all that apply.

- A. Add a folder named Customer to the Views folder. Then create a view inside this folder named Edit.aspx.
- B. Add a folder named EditCustomer to the Views folder. Then create a view inside this folder named Catalog.aspx.
- C. Add a class named CustomerController to the Controllers folder. Then add a method named Edit to the class.

D. Add a class named Catalog to the Controllers folder. Then add a method named EditCustomer to the class.

Correct Answer: AC

From scenario: One of the business requirements, is that administrators must be able to edit information about existing customers

QUESTION 4

You are developing an ASP.NET MVC application. Devices that use many different browsers will use the application. You have the following requirements:

- Content must display correctly when a device is in landscape or portrait orientation.
- Content must not scale when the device orientation changes.
- Content must be displayed by using the maximum available screen space.
- The application must render properly in Internet Explorer 8 or later versions.

You need to configure the application.

Which two actions should you perform? Each correct answer presents part of the solution.

- A. Use JavaScript to evaluate the `window.innerWidth` and `window.innerHeight` properties.
- B. Set the value of the `width` property for the viewport meta tag to `device-width`.
- C. Use CSS to target the HTML element on each page. Set the values of the `width` and `height` properties to 100%.
- D. Use CSS media queries to target screen size, device orientation, and other browser capabilities.

Correct Answer: BD

B: If you want the viewport width to match the device's physical pixels, you can specify the following:

For this to work correctly, you must not explicitly force elements to exceed that width (e.g., using a `width` attribute or CSS property), otherwise the browser will be forced to use a larger viewport regardless.

D: Media queries in CSS3 extend the CSS2 media types idea: Instead of looking for a type of device, they look at the capability of the device. Media queries can be used to check many things, such as: width and height of the viewport width and height of the device orientation (is the tablet/phone in landscape or portrait mode?) resolution Using media queries are a popular technique for delivering a tailored style sheet to tablets, iPhone, and Androids.

QUESTION 5

You have been instructed to maximize performance for users who download audiovisual media via HTTP clients that support different content encodings by configuring caching on the `DownloadAudiovisualMedia` action. You want to write code to include the necessary attribute. Which of the following is a property that should be included in your code?

- A. The VaryByControl property.
- B. The VaryByCustom property.
- C. The VaryByHeader property.
- D. The VaryByParam property.
- E. The VaryByContentEncoding property.

Correct Answer: E
